Yes, this is all for fun.

Tone circuit link you provided should be fine. I don't intend to do
any breadboarding before I fab a pc board. I don't have the eyesight
or the steady hand that I had as a kid, but my circuit design is
ten-fold better so that I can usually do up a board that can be shipped
first go around.

I was thinking of using that Red Sun radio (RP2100 I think it's called)
for a platform cause it has IF out. Also thinking of a Rad Shack
DX-394 I think it is. Looks like I got my RA17L sold so that should
finance this project. I'm out of work and on a tight budget so I have
to sell this to pay for that.

ABSOLUTELY on the Sony MDR V150 for modern radios.

But the BEST headphones for shortwave listening which I have EVER used (and still use occasionally) are the Clevite "Brush" Crystal Headphones Model BA-200. They have restricted frequency range to minimize static and hiss, and overall clear and bright sound up to about 5000 Hz. When you can't "read" a signal through a loudspeaker, these come to the rescue! Unfortunately the impedance is so high (45,000[!] Ohms at 1000 Hz) that the volume is greatly attenuated when using them with modern radios. But used with my old Lafayette HE-10 (or any other classic tube receiver), they are tops. And I mean TOPS! I bought mine in July 1962 and they are still as good as new!

Best,

Joe

You may want to re-consider that since pin diode attenuators have large
intermodulation products.

Then again you did say it is a non-conforming transmitter.

If you care about intermodulation then go with an electromechanical
type attenuator.

In all reality, truth be known, the "nuttiest" of posters herein is most
certainly Mark himself.

Mark has ample time to post to these newsgroups...look at his timelines.
That bespeaks volumes.

Look at the posts made by others and then compare them to the posts made by
Mark. Clearly Mark has far too much time to whittle away. His home life is
quite obviously lacking anything of interest.

Usenet is Mark's entire life. He lives for it, breathes it, and is a sad result of same.

So sad, he is.

Today (2 December) I noted Radio East Sepik, 3335, sign-off at 1301
with Anthem then silence to 1304 then up in English with what must have
been their National Service out of Port Moresby. Item about AIDS
protection, weather, and an interesting song seemingly about national
unity. Finally pulled the plug on the transmitter at 1309.

Good signal peaking at S9 using the Drake R7 and 200' W-E wire.

Thanks for the link.
TCI/CBC hasn't changed from the above three freqs in at least 4 years.
Bummer about the only normal, non utility, broadcasts I listen to are
Vinyl Cafe and the CBC Science show.

No reset hole/switch on a DX-440. Manual implies reset is done
by removing batteries for one minute. I remember seeing
newsgroup messages to keep batteries out as long as a day
for various radios to get them to reset so you may have to
experiment a little. Good luck! I'm still impressed with mine.

Regards,
John

snip
> Michael

Back in 1972 when I took my FFC 2nd and 1st class exams DSB was defined as the sidebands with a supressed carrier. A signal with both sidebands and the
carrier was simply AM with a BW disgnator. .Now that diffintion may have slipped
over the years, but from my perspective AM means both sidebands, with a carier
DSB means both sidebands without the carrier, and ISB means two different
sidebands with no carrier. I only have received the later, ISB, a very few times
mainly on ancient STL links.

It might be useful to check out what the ITU says these days about "AM", both sidebands with carrier", and for this conversation, "DSB" being both sidebands without the carrier.

Try using an audio output transformer, plate to speaker, in reverse.
Should
give you quite a boast on the audio level with no ill effects. It might
be a good
idea to put either a 10K pot oo a 1 to 2 K resistor in series to help
control
any low level background noise common in most recveivers.

Unplug/take out the batteries and push all of the buttons.Leave it like that (without putting the batteries back in) for a day or so.That might reset the radio.

This is for UHF. ''Non-conforming'' is meaning the carriers are not
synched and don't add up cleanly to the sum of their individual
milliWatts. This creates heat in the combiner which can also increase
3rd order products. I'm using this:

http://www.minicircuits.com/pdfs/ZB5CS-920-10W.pdf

As I understand it, pin diode attenuators are pretty clean within a
certain attenuation range. I'd use off the shelf except nobody I can
find makes one that can handle +37 dBm.

This circuit will be used for AGC so we're pretty much locked into an
electronic solution. Thanks.

That high authority, Wikipedia, at http://en.wikipedia.org/wiki/DSB
says, "in telecommunications, double-sideband transmission - see also
double-sideband suppressed-carrier transmission (DSB-SC) and
double-sideband reduced carrier transmission (DSB-RC)".

That is supported by ATIS Telecom Glossary 2000 (ANSI approved) at
http://www.atis.org/tg2k/ : "DSB: Abbreviation for double sideband. See
double-sideband transmission." ---> "double-sideband (DSB)
transmission: AM transmission in which both sidebands and the carrier
are transmitted." and "DSB-SC: Abbreviation for double-sideband
suppressed carrier. See double-sideband suppressed-carrier
transmission." ---> "double-sideband suppressed-carrier (DSB-SC)
transmission: Transmission in which (a) frequencies produced by
amplitude modulation are symmetrically spaced above and below the

carrier frequency and (b) the carrier level is reduced to the lowest practical level, ideally completely suppressed. Note: DSB-SC transmission is a special case of double-sideband reduced carrier transmission."

Accordingly, DSB=AM unmodified and AM is the essential first step for its modified variants SSB, ISB, DSB-SC/DSB-RC.

A "commercial" and/or "professional" company did the work.
Mr. Yuppy is in fact a pretty nice guy after you get past the BS
attitude.

He had another company come and give an estimate and was very pissed to
find all the corners the original installers cut. Unhappy enough to
threaten to
take them to court, he is a lawyer, and they folded. Massive "We're
sorry"
and here take some money to not sue us. He also filed, or will file a
complaint
with the states professional engineering office. Did I mention he was
pissed?

One of the corners that was missed was proper fusing. The battery bank
was
a fire hazard waiting to get them.

I have ended up making a friend, and he is interested in SW. Alls well
that
ends well.

As to sending you some buffalo steaks, sorry, we will be eating ate
another nice
set tonight. He dropped them off this morning and wanted to thank me
again
for not being as big a jerk as he had been.

There is an adjoining 15 acre parcel of land that my wife an I are
taking a very
hard look at. Developers are making nice noises about buying us out and
it
would be nice to retire a few years early. Since my wife is a country
girl at
heart, and hasn't ever really liked where we have lived for the last 30
years,
the city is creeping closer and closer, and the closer they get, the
more
RF noise there is. 15 Acres in the middle of nowhere is a very

attractive idea.

Thanks for the link.
While I don't work in transmitter land, this will ruin their day
Monday. They have several PIN attenuators in the ATSC
combiner path and we have some IMD issues.

I have been mildly interested in the Bose headsets I've seen advertised
on TV lately. But over $300 for a set of headphones? Those things
better transmit and receive on 160 through 10 meters if I'm gonna pay
that kind of a price.

I can just picture my cats deciding to "snack" on the cord, just like
they did to my $40 RatShack headsets....

Source record: 99210

I've been reading a few posts about Chuck Harder. Actually, he was missing from shortwave for several years. Joe Hill, formally with World Harvest Radio, use to give him "breaks" on his billing all of the time. Hill knew that Harder brought an audience to the station(s). So he pandered to him when it came to air time costs.

After Hill was forced to resign, Joe Brashier also tried to give him as much slack as possible. But when Brashier was forced to resign, the two people at WHR/LeSEA Broadcasting who took over for him, and knew nothing about shortwave broadcasting, decided that he needed to pay a wonderful new price on a wonderful new rate card. Harder said "no thanks".

So he remained off of shortwave for years. WWCR approached him a few times, but all he wanted to do was trade out a couple of AM transmitters for air time.

Then Katrina hit. And WWCR's main corporate station, WVOG-AM in New Orleans was destroyed. (And in need of a couple of transmitters!)

So WWCR decided to bring Chuck back on the air as a trade out: transmitters for air time.

Now the deal has been completed. And Harder doesn't want to fork out the cash to remain on the air. He was spoiled for too long by the freebies he received from WHR.

http://www.ng2000.com/news.php?tp=shortwave

WASHINGTON - You don't need 007's "Q" to listen in on coded broadcasts that are transmitted to spies in faraway places. Anybody can tune in to the world's top spy agencies talking to operatives in harm's way. All you need is a cheap shortwave radio receiver - the kind available at any drugstore.

The re-Todd doesn't seem to be promoting it as much. Maybe he just used it to get a date: "Hey baby, I got my own radio station, wanna see some cartoons?"

You Earned that right too, when you passed the 20 wpm code test, and
you should flaunt it around like I do. Here are some ideas I like:

No-code hams should have to stand up salute when you walk into a room,
even ones in wheelchairs.

You get to sit in a chair at club meetings and if all the chairs are
taken you can make a no-code or nickel ham sit on the floor.

First in line for the refreshments, ahead of the 13wpm hams and the nickel
hams is always nice too. Don't forget your cattle prod.

73 to you my extra class friend, you earned it. Everyone else these days
just wants a welfare handout license.

Are you arguing semantics, or understanding?

The post I replied to was almost outraged by that PDF's useage of "DSB".
I couldn't figure out whether he was just fussing over words (and thus
why was he so outraged?), or really does believe that DSB is not AM.

Because people have become sloppy about the words, some of all
these conversations about "better AM detectors" is limited. Because
people are searching for something that really isn't all that different
from what's already available. That PDF talks in terms of how
synchronous detectors get too much hype, yet the author turns around
and uses everything a "synchronous detector" has except the actual
synchronization. But the synchronization isn't actually what provides
the potentially improved reception, it's just a means of compensating

for some side effects.

I never got around to replying, but a few months ago someone started a thread here where he stated something like "So I gather the carrier is more likely to fade when selective fading is happening". I haven't a clue whether the carrier is more likely to fade than the sidebands, but once the carrier fades in relationship to the sidebands you're going to start having reception problems, and once the carrier completely fades you won't be able to recover the modulation. The carrier is the key part to demodulation. But a more universal understanding of "amplitude modulation" would show right away that you can't demodulate a DSB signal unless a carrier is sent along, or generated locally at the receiver end, and selective fading can mean that a DSBc signal sent from the transmitter may be a DSBsc (Double SIdeband suppressed carrier) by the time it reaches the receiver.

So in this sort of talk, you'd better start being specific about what you are talking about. Since DSB (with or without a carrier) and SSB (with or without a carrier) are "AM", then you really need to stop using "AM" to only mean DSBc.

Hence DSB in the PDF is more descriptive than AM. Is he confused? I don't think so. In his opening paragraph he says "Note: DSB (Double Sideband full-carrier) and SSB (single sideband suppressed carrier) are both amplitude modulation". He defines the term as he is about to use them, so there is no confusion. He needs to use the DSB rather than a more generic "AM" because he is very much thinking in terms of two sidebands (even if he turns around and removes one). The fact that there are two sidebands rather than one may be more significant than whether or not there is a carrier.

Since he defined his terms to begin with, any subsequent useage of "DSB" is taken care of. But, again, even if that was not the case, his useage is fine, because whether or not a carrier is sent is irrelevant to his discussion. It's easy to get a locally generated "carrier", and if it's just one sideband it's done all the time, with a bit of mistuning. But with two sidebands, it's far harder. Hence you can either determine where the locally generated carrier needs to be from the the redundant sidebands, or strip off one sideband so it becomes SSB and placing the carrier becomes much easier.

Maybe he should have gone with DSBc to show that he is talking about a DSB signal with carrier, but that is hardly a confusion of AM and DSB.

As for common useage of so many of these terms, nobody had to specify how many sidebands and whether a carrier went with it until they started to use a subset of that stuff. Look in early articles about SSB and it was pretty common for them to be most specific, ie SSBsc (SSB suppressed carrier). It's only later that it simply became SSB. Nobody really thought of sending DSB without a carrier until SSB came along, and there too it was not uncommon to see it referred to as DSBsc.

how do i know if the R71A that i am consiering purchasing has jus the notch filter or the PBT/notch? I can tell you this the unit says only notch above the pot. on the faceplate, but i read somewhere that the unit could still have PBT even though it only says notch. also the serial number is 03xxxxx.
any r71 experts that could help me out. if it doesn't have the notch could it be modified? also what is the difference between the r71a, d and e?

thanks in advance, john

Question is, how long will it be before the vast majority of the sheeple
will come to believe that the commericials ARE the entertainment. MADison
Avenue has been working hard to blur the line for decades, what with half
hour commercials for toys thinly disguised as cartoons.. and a recent
episode of a sitcom that's a half hour commercial for Chili's.

I just don't buy the argument that nobody thought about DSB. DSB is naturally generated from a mixer if the audio signal is zero mean. [Again, it is best to talk about modulation schemes by discussion modulators.] Remember, AM exists because the demod is cheaper, not because it is any easier to generate that say DSB. AM and DSB use the same hardware.

> Michael

To get to the meat of the problem, the only utility in any of these demod schemes is if you can narrow band the signal. That is, just because you can build a demodulator that can use both sidebands without need of the carrier, it doesn't mean the quality of the signal will be any better. Wider bandwidth signals are more prone to atmospheric effects, i.e. fading. Thus if you are going to do synchronous detection, you need to receive one side band, period.

I walked in the local store here a while back and one of the store lackeys asked if he could help me. I told him that I needed a couple of integrated circuits. He said we don't have those. I chuckled to myself and walked over to the IC rack and grabbed a pair of D flip-flops. I smiled at him as I walked by and waved the package of chips at him.

On another occasion I walked in and got whatever I needed and got in line. The line was five deep and only one register was open. The store was crowded and one of the high school worker drones - ya know, wearing the rad shack smock and the name tag - was sitting on the floor and playing with a radio control car. I'm a little cranky to begin with and the store is hot so I yell up to the dude at the register, "Hey buddy, how bout we get this guy over here playing with the toys to open up another register?" Got a few chuckles/smiles from the others waiting in line and the kid put the toy away and helped out. See, I don't mind telling people exactly what I think or if need be how they should behave. So I leave the store and over to Wal-mart for some more shoppin. A little while later I'm walking past the Rad Shack and the manager girl is outside on the sidewalk playing with the car. I laugh to myself.

Just try not to lose it and be rude to those people over there. Try to be polite to em. Most of them are just high school kids or marginally capable of eeking out a living and stuck in a dead-end job.

ISB (with carrier) has been around for a while. It was used in one of the
original AM Stereo experiments. I believe it was Kahn that was using it. The
only station I know of personally that used it commercially was XETRA, and
it actually didn't do too badly, but you needed either a special receiver or
two radios to tune the two sidebands to receive stereo. It was not a
compatible system though in the sense that on a single standard AM radio,
you only heard the channel (perhaps with some spillover depending on tuning)
that the radio was designed to demodulate.

The problem with trusting the so-called independant news sources is that
almost without exception they are either getting THEIR news feeds from
established "controlled" media or are getting it from someone that makes it
up as they go along, or making it up themselves as they go along. Most of
the small indies get their feed from established sources and put their own
slant on it. They don't have the wampum to put their own people in the
field.

mot of his waking hour

nah yu just don't understand I sit down spend a fe w minute and get up
do soemthing else till I need to take a break

but I declare Sllow Code kook becuase he is clearly insane he claims
the wants to preserve ham Radio and yet he propses thing EVEN HE
ADMITS would kill the ARS if enacted

that is clearly the work of a nut job

still wating on your call sign Mr Bell I note by you current
nickaddress that you are focusing your online existance in harrasing a
man you claim is insane and of no import a picualr endevour
(before you acuse me of the same try and use your pea brain) I am here
to take part in the finsihing of the Code Nocode part somewhere round
the R&O I am outa here (ihaven't decided when exactly I will leave
this cesspool like about a week to 2 weeks after I obtain my own extra
class license (depends on the effective date of R&O and to some extent
on the date it is issues and the exact contents

then you can go back to whatever stalking you were doing before or
seek another bright flame to be drawn too as you have to me

>
> thanks in advance, john
>

If the PBT is installed, the knob that says 'Notch' will be a
concentric double control.

If you do not have PBT installed, the circuitry is still on the
mother board, and with a service manual, and a handful of parts, you can
restore PBT by simply installing the parts as described on the board.
You may even be able to find the PBT faceplate. ICOM still had a few in
stock as of a couple of years ago.

The difference between R71A, D, and E are compliance with bandplans
limited by law in other regions around the world. R71A is the American
version, without deleted segments of the bands.

When you study communications in a university, it tends to be pure theory rather than some specific protocol. While this seems counter-intuitive, understanding the theory means you can figure out some proprietary standard when the time comes. The only exceptions that come to mind would be something like duobinary modulation, which I think was a GTE patent, though it was treated as something generic. So getting back to ISB, it never came up, though by your description it is a matter of pulling out the sideband independently. So if you understand SSB, ISB would follow.

Peter do you happen to know what the difference is between the 414 and
414SL is? I picked up a pair of SL's last week ($5) that are in very good
shape (look like they just sat in the box for years) but need new pads. I
found
pads for the 414's on ebay but they state that they don't fit the SL's. They
sure
sound good plugged into my Sansui but would be much better with pads. RM~

PS, the actual phone measures 2 5/8 in.

Allow me to try to properly spell your own words, Mork. Like a moth to a
flame. You simply cannot resist, can you? You are predisposed to, as Slow
Code says, "dump" on each and every post made herein. You just cannot help
yourself. You obviously have far too much time on our idle hands.
Apparently my previous post hit Baby Mark on the soft spot on his jumbled
head. Your rejoinder was almost decipherable...almost.

And again, as in posts previous, you challenge me to give my callsign as "proof" of my existance. For what? Your third grade bent on Machismo? That is lame, Mark, even for you.

I'll give you my callsign, Mark. Meet me on 17M sometime...legally. I'll give my call every ten minutes as required. In fact, Mark, I am not all that far from you, so chatting on 17M even when the band is down should be easy to do. We can chat there...

Oh, and if r.r.a.p. has turned into a cesspool, look no further than your own mirror. You are part and parcel of the ruination of this group. In fact, Mark, you are the MAJOR reason this group has so sadly deteriorated.

Alexander Graham Bell.
CW tested and FCC approved.
callsign to be divulged on 17 meters....

-
nor can he spell his insults correctly if he is going to attack my spellinghis should be beyond repaorch

hey rayburn, anonymous is right. the amounts they sell are far smaller than doses used by hospitals to do a bone scan (I know, I had one done some 13 years ago to track down a problem) and I am still very much alive (go figure, eh?).

perhaps you need to do a little more research before spouting off that its "bullshit"?

FCC EMISSION DESIGNATORS
Detailed List
Last Rev. 1998

WARC-79, the World Administrative Radio Conference that rewrote many
of the world's radio regulations, adopted a new system of emission
classification. The traditional A (Amplitude), F (Frequency), and P
(Pulse) was intuitive, but limited and clumsy when dealing with new
modes.

The world's radio bodies, including the FCC, gradually phased in the
new system until today it completely replaces the old one.

The formula for the new designations, loosely from ITU radio
regulations 264 through 273, and Appendix 6, Part A, is:

[BBBB]MNI[DM],

where

[] means optional when writing emission specs.

[BBBB] = Necessary Bandwidth (shown in FCC records, but is often
omitted elsewhere)

Uses a letter and three numbers. The letter goes where the decimal
point should be placed, and denotes a magnitude:

H Hz
K kHz
M MHz
G GHz

Some common bandwidths are:

400 Hz 400H
2.4 kHz 2K40
12.5 kHz 12K5
6 MHz 6M00

M = Modulation Type

N None
A AM (Amplitude Modulation), double sideband, full carrier
H AM, single sideband, full carrier
R AM, single sideband, reduced or controlled carrier
J AM, single sideband, suppressed carrier
B AM, independent sidebands
C AM, vestigial sideband (commonly analog TV)

F Angle-modulated, straight FM
G Angle-modulated, phase modulation (common; sounds like FM)

D Carrier is amplitude and angle modulated

P Pulse, no modulation
K Pulse, amplitude modulation (PAM, PSM)
L Pulse, width modulation (PWM)
M Pulse, phase or position modulation (PPM)
Q Pulse, carrier also angle-modulated during pulse
W Pulse, two or more modes used

X All cases not covered above

N = Nature of modulating signal

0 None
1 Digital, on-off or quantized, no modulation
2 Digital, with modulation
3 Single analog channel
7 Two or more digital channels
8 Two or more analog channels
9 Composite, one or more digital channel, one or more analog

X All cases not covered above

I = Information type

N None
A Aural telegraphy, for people (Morse code)
B Telegraphy for machine copy (RTTY, fast Morse)
C Analog fax
D Data, telemetry, telecommand
E Telephony, voice, sound broadcasting
F Video, television
W Combinations of the above

X All cases not covered above

[DM] = additional details, not used by FCC, optional elsewhere

D = Detail

RTTY/modems:

A Two condition code, differing numbers or durations (Morse)
B Two condition code, same number and duration, no error check
C Two condition code, same num & dur, error check

D Four condition code, 1 or more bits per condition
E Multi condition code, 1 or more bits per condition
F Multi condition code, conditions may combine

Audio:

G Broadcast quality (mono)
H Broadcast quality (stereo/multichannel)
J Commercial quality
K Commercial quality, analog freq inversion or band scrambling
L Commercial quality, FM pilot tone (i.e. Lincomprex)

Video:

M Monochrome
N Color

W Combination

X All cases not covered above

M = Multiplex type

N None
C Code division
F Frequency division
T Time division
W Combination of above

X All other types

And here is the relevant section of FCC rules:

From General Docket No. 80-739

Section 2.201 Emission, modulation, and transmission characteristics.

The following system of designating emission, modulation, and transmission characteristics shall be employed.

(a) Emissions are designated according to their classification and their necessary bandwidth.

(b) A minimum of three symbols are used to describe the basic characteristics of radio waves. Emissions are classified and symbolized according to the following characteristics:

(1) First symbol - type of modulation of the main carrier;

(2) Second Symbol - nature of signal(s) modulating the main carrier;

(3) Third symbol - type of information to be transmitted.

NOTE: A fourth and fifth symbol are provided for additional information and are shown in Appendix 6, Part A of the ITU Radio Regulations. Use of the fourth and fifth symbol is optional. Therefore, the symbols may be used as described in Appendix 6, but are not required by the Commission.

(c) First Symbol - types of modulation of the main carrier:

(1) Emission of an unmodulated carrier N

(2) Emission in which the main carrier is amplitude-modulated (including cases where sub-carriers are angle modulated):
- Double-sideband A
- Single-sideband, full carrier H
- Single-sideband, reduced or variable level carrier R
- Single-sideband, suppressed carrier J
- Independent sidebands B
- Vestigial sideband C

(3) Emission in which the main carrier is angle-modulated:
- Frequency modulation F
- Phase modulation G

NOTE: Whenever frequency modulation "F" is indicated, Phase modulation "G" is also acceptable.

(4) Emission in which the main carrier is amplitude and angle-modulated either simultaneously or in a pre-established sequence D

(5) Emission of pulses:*
- Sequence of unmodulated pulses P
- A sequence of pulses:
- Modulated in amplitude K
- Modulated in width/duration L
- Modulated in position/phase M
- In which the carrier is angle-modulated during the

period of the pulse Q
- Which is a combination of the foregoing or is
produced by other means V

(6) Cases not covered above, in which an emission consists
of the main carrier modulated, either simultaneously or
in a pre-established sequence, a combination of two or
more of the following modes: amplitude, angle, pulse W

(7) Cases not otherwise covered X

*Emissions where the main carrier is directly modulated by a
signal which has been coded into quantizied form (e.g.,
pulse code modulation) should be designated under (2) or
(3).

(d) Second Symbol- nature of signal(s) modulating the main
carrier:

(1) No modulating signal 0

(2) A single channel containing quantized or digital
information without the use of a modulating sub-
carrier, excluding time-division multiplex 1

(3) A single channel containing quantized or digital
information with the use of a modulating sub-carrier,
excluding time-division multiplex 2

(4) A single channel containing analogue information 3

(5) Two or more channels containing quantized or digital
information 7

(6) Two or more channels containing analogue information 8

(7) Composite system with one or more channels containing
quantized or digital information, to-gether with one or
more channels containing analogue information 9

(8) Cases not otherwise covered X

(e) Third Symbol - type of information to be transmitted:

(1) No information transmitted N

(2) Telegraphy - for aural reception A

(3) Telegraphy - for automatic reception B

(4) Facsimile C

(5) Data transmission, telemetry, telecommand D

(6) Telephony (including sound broadcasting) E

(7) Television (video) F

(8) Combination of the above W

(9) Cases not otherwise covered X

(f) Type B emission: As an exception to the above principles, damped waves are symbolized in the Commission's rules and regulations as type B emission. The use of type B emissions is forbidden.

(g) Whenever the full designation of an emission is necessary, the symbol for that emission, as given above, shall be preceded by the necessary bandwidth of the emission as indicated in Section 2.202 (b) (1).

Section 2.202 Bandwidths.

(b) Necessary bandwidths.

(1) The necessary bandwidth shall be expressed by three numerals and one letter. The letter occupies the position of the decimal point and represents the unit of bandwidth. The first character shall be neither zero nor K, M or G.

No big deal there Terry, it's really a minor issue and probably would work no problem anyway. What I found is just that the way the detector is shown the output will be negative. I simulated it in SwitchercadIII. (That's my secret to designing pc boards that work without breadboarding.) I would appreciate if you look at and comment on a couple of things with the circuit though. I am a power supply guy and I don't know too much about detectors.

Rob uses a RC filter on the output of this thing so that the output is an avaraging operation rather than responding to the peak of the waveform. It looks like the pole is set for near 5kHz so some phase distortion is going to be introduced - probably not a big deal. Rob goes out of his way to do a full wave rectification, but that doesn't make much sense to me with the filter he sticks on the end.
What do you think about just doing a detector that responds to the peak of the waveform in a half-wave type rectifier? By the time this signal goes through a 4kHz elliptic filter there isn't going to be a microvolt of 455kHz signal to be found. Gain the IF signal up so that any error due to diode matching will be minimized. I have a circuit that uses 3 schottkys in Spice that should do a nice job. I can send it to you if you run Switchercad. It's a free download.

regards,
Bob

3122. Neo-Kommies Poised to Keep U.S. Military Assets Defenseless

Newsgroup: rec.radio.shortwave
Date: 2006-12-03 16:13:03 UTC
From: "del.icio.us" <snuffout@leftwingers.org>

Source record: 99162

Neo-Communist Democratic leaders are poised to gut America's missile defense - at the same time Communist North Korea and Islam-0-Fascist Iran are testing long-range missiles that can strike the U.S. and its allies, including Israel, Japan and Britain.

Meanwhile, sources inside the missile-defense community tell Pajamas Media that the Bush administration is planning to ask Congress to begin funding development of an "orbital battle station."

With these key developments, 2007 is set to be the biggest battle of space-based weapons since President Reagan proposed "Star Wars" in 1983.

The incoming chairman of the Senate's Armed Services Committee is Carl Levin. Levin, a Michigan Neo-Communist Democrat, has long been a foe of missile defense. In 1980s, he worried that President Reagan's Strategic Defense Initiative " which aimed to develop technology to destroy Soviet missiles during all phases of flight " was "destabilizing."

Today Neo-Communist Sen. Levin sings the same tune in a different key. "They've not done the operational testing yet that is convincing," said Neo-Communist Senator Levin during a post-election press conference. He was referring to the Ground based Missile Defense [GMD] system being installed in Alaska and California, to defend against North Korean missiles. He added that he favors stalling purchases of interceptor missiles - vital for missile defense " until after testing is complete.

In short, Neo-Communist Sen. Levin and other longtime opponents of missile defense plan to use "testing" - set to an unrealistically high level - to stop missile defense.

How the Game is Played

Former Assistant Secretary of Defense Frank Gaffney explains how the game works: "The idea is that we put it [missile defense] on ice until absolutely everybody is satisfied. It is a formula for not having the missile defense we need."

Critics hope to stop missile defense by devoting its entire budget to testing, which is costly. At $100 million dollars or more per test, a test or two could easily absorb the entire Ground-based missile defense budget.

Certainly testing sounds reasonable. Why not make sure the stuff works before blowing billions on it? But the testing fixation ignores that, like software, most successful weapons systems are best debugged after being deployed. And some weapons systems were never tested at all before deployment.

Complex weapons systems have often been used successfully without proper testing. In 1940, Britain's new air defenses ' radars, ground observers, anti-aircraft guns and squadrons of Spitfires and Hurricanes ' had never been tested against even a small scale simulated attack. Yet they won the Battle of Britain. Likewise in the 1991 Gulf War the first two E-8A ground surveillance radar aircraft had only just begun a long testing process when they were shipped to Saudi Arabia. During the war they performed magnificently and now these aircraft are in high demand all over the world.

For decades, Neo-Communist critics of advanced technology weapons have pointed to testing failures to support their drive to cancel the programs. Yet test failures are a normal part of the development process of any weapon system. Consider the M-1 tank. Its early tests were riddled with failures, yet now it is one of the most effective tanks in the world.

Neo-Communist Democrats: 'A limited defense capability that works.' Reasonable but Disingenuous

Over in the House of Representatives, Neo-Communist Democrats are deploying a similar strategy to stop missile defense. Seven House Neo-Communist Democrats, including Ike Skelton (D-MO), John Spratt (D-SC), Loretta Sanchez and Neil Abercrombie (D-HI), recently sent a letter to Secretary of Defense Donald Rumsfeld complaining of 'tests that have been highly scripted with unrealistic countermeasures, the time of the enemy launch was known and the threat came from only a single enemy missile.' This sounds reasonable, but is actually disingenuous. Each test is designed to achieve a specific set of goals, this is what the Neo-Communist Democrats mean by 'scripted.'

Each test requires the use of a heavily modified ICBM as a target. Hundreds, maybe thousands of highly trained specialists operate sensors and collect the telemetry from both the interceptor and the target missile. Development testing like this is designed to gather information on performance and reliability. It will be years before the system is ready for 'operational testing.'

While the Neo-Communist Democratic lawmakers insist they support 'fielding a limited defense capability that works,' they still see missile defense as a boondoggle. The Neo-Communist letter writers contend: 'Since the Strategic Defense Initiative (SDI) was launched in the mid 1980's the United States has spent nearly $100 billion dollars on missile defense programs and studies with little to show for it.' This last sentence is ironic since most Neo-Communist Democrats have long opposed any actual deployment of strategic missile defenses.

Missile Defense: A Brief History

Missile Defense has gone through several phases of research and development. In the early 1990s a system called Brilliant Pebbles was ready to begin development when it was canceled by the Neo-Communist Clinton administration.

Meanwhile a number of tactical missile defense systems have been developed including the Patriot PAC-3, which worked well during the 2003 Iraq

operation and as well as the Terminal High Altitude Air Defense (THAAD) missile which is planned to begin operations in 2009 and the Airborne Laser built into a Boeing 747 which may be operational early in the next decade.

Neo-Communist Democrats in Congress have learned not to treat homeland missile defense with the disdain they demonstrated in the 1980s; the threat of attack from rogue nations seems far too real to shrug off. Generally Neo-Communist Democratic lawmakers support for modest research budgets and "limited" missile defenses, while citing "inadequate testing" to stop actual deployment.

Neo-Communist Democratic opponents of missile defense often speak as if the ground-based missile defense system was the whole program, ignoring the sea based SM-3 missile, which has been undergoing a rigorous and successful test program in the waters off Hawaii. Indeed, it is so successful that Japanese government is buying it to equip its Aegis cruisers. The Defense Department has been reluctant to fund an upgrade of the system to give it its full potential against long range missiles.

How Serious Are Pols About Missile Defense?

One test of how serious both Neo-Communist Democrats and the Bush Administration is about defending America against missile attack is whether they are ready to use the ultimate high ground - outer space. The best time to hit a ballistic missile is just after blast off when it is climbing against of gravity and emitting a massive heat signature. This is known as "Boost Phase Intercept." In 1992 a space-based system that could perform this task known as Brilliant Pebbles was being developed by the Strategic Defense Initiative Organization [SDIO]. It was canceled by Neo-Communist Les Aspin, Clinton"s first Neo-Communist Secretary of Defense, who claimed that he was "taking the Stars out of Star Wars."

Neo-Communist Aspin also imposed drastic cuts to the long term missile defense science and technology research budget, cuts from which that part of the program has never really recovered.

Coming Soon: The Orbital Battle Station

The Bush administration is going to ask Congress for funding to begin development of an "orbital battle station" that will be able to attack enemy missiles in their vulnerable boost phase.

Each Battle Station would be a fairly large satellite that carried a number, perhaps 40 to 50 infrared guided "kill vehicles." On orders from the ground, the battle station would launch these kill vehicles, roughly about the size of a loaf of bread, at incoming missiles. Professor Everett Dolman of the School of Advanced Air and Space Studies at Maxwell Air Force Base in Alabama and the author of Astropolitik - Classical Geopolitics in The Space Age, says that space based systems are "the only viable option for global defense against the most likely threats, such as an attack by Iran against Israel or by Pakistan against India."

�The technology,� Dolman said, �for a basic orbital interceptor that could hit an ICBM in mid flight has been available to the U.S. for at least two decades. Indeed should the U.S. dedicate itself to a fast track development and deployment of several dozen networked anti-missile satellites, it could have a baseline capability in place within two years.�

The Bush administration pending request for an orbital battle station will surely touch off a brawl over �space weaponization�. Neo-Communist Loren Dealy a spokeswoman for the Neo-Communist Democrats on the House Armed Services Committee told Pajamas Media: �Our members have serious concerns with the concept of space-based interceptors.�

Neo-Communist Critics have long believed space-based systems would set off an arms race in space that would destabilize international relations. Keeping space a sanctuary for our satellites seems reasonable, until one recognizes that this leaves billions of dollars of vital U.S. military assets defenseless targets that could be hit and destroyed by primitive space weapons that Islam-0-Fascist Iran or others could build regardless of any restraint we show. The orbital battle stations could possibly knock out such weapons the same way they knock out long range missiles.

While some Neo-Communist Democrats can be expected to fight tooth and nail against any orbital battle station, the defense community suggests that others such as Rep. Norm Dicks (D-WA) are not going to reject space-based defense as out of hand. Others such as Rep. John Spratt (D-SC) may want to slow things down. Last May, he said �We owe it to ourselves to understand the full ramifications of a move into space before we introduce this additional variable into the missile defense equation.� Overall they may spend the same sums the GOP was planning to spend, but would keep any effective defense systems on the drawing board forever.

Now that the Neo-Communist Democrats are in charge of both houses of Congress for the first time since the 9-11 attacks, they face an important and ultimately revealing choice: will they to stick with the bromides beloved by their Neo-Communist base or work with the president to safeguard the country from Communist North Korean and Islam-0-Fascist Iranian missiles?

What do you want to listen to, the audio of the radio program or the noise
from your receiver?
For listening to talk radio programs and SWL a HiFi set of cans will give
you listeners fatigue.

For serious weak signal SW DXing I use Kenwood HS-5 which limits the audio
frequencies to the critical audio spectrum where my ear is most sensitive
and the audio that is available from a radio broadcast.
For portable/casual SWL & talk radio I use the Sennheiser PX-200 whose audio
frequency response cuts out in the high audio frequencies which are not
present in radio audio, just receiver noise - fatigue.

If you want HiFi look at Grado cans.

The one thing you cant get is the PBT/Notch knobs. I tried for almost
two years with no luck.

I wouldn't bother with one that doesn't have PBT. There are tons of them
out there in good shape with it.

>because it is any easier to generate that say DSB. AM and DSB use the
>same hardware.

But there's something where a DSB local carrier has to be in phase with
the signal, otherwise there some sort of canceling effect from the two
sidebands. SSB doesn't have the problem, it just causes a pitch shift.

The only DSB I know of, (that isn't just treated as a cheap form of SSB,
where really only one sideband is used) is the L-R subcarrier in FM stereo
where they double the pilot tone to get an in phase carrier.

BROADCASTS IN ENGLISH - B06 (WINTER 2006) EDITION

The Winter 2006-2007 (B06) edition of Broadcasts in English is now available from the British DX Club. It was compiled by Dave Kenny and includes details of all known international broadcasts in English on shortwave and mediumwave for the B06 schedule period, as well as selected domestic English-language broadcasts on short wave.

As usual the 32-page booklet is in time order and covers all target areas worldwide. Transmitter sites are given where possible along with schedules for DX and Media Programmes, Digital Radio Mondiale (DRM) and World Radio Network services in English to Europe.

Copies are available at the following prices (postage included):

United Kingdom - 2.50 pounds sterling
Europe - 5 Euros or 6 International Reply Coupons
Rest of World: 7 US dollars or 7 IRCs

Sterling payments by cheque/postal order to "British DX Club"
Dollar or Euro payments in cash or via Paypal.

Orders to:
British DX Club
10 Hemdean Hill
Caversham,
Reading RG4 7SB
UK

Email / Paypal enquiries : bdxc@bdxc.org.uk

DUH!

You have to do full-wave rectification if you are going to use a
avaraging type of filter. Think about it.
The precision half-wave circuit that responds to peak should work well
also. I'll probably stick em both on the board.

Probably not. Even though ND beacons use AM emission, SSB or CW are the best modes for hunting weak beacons. I prefer to use SSB and whatever filter is narrow enough to kill adjacent frequency QRM in a given situation. It helps if your RX has a good noise blanker (NB), passband tuning, and a notch filter. Sometimes turning the AGC off will help dig a really weak beacon out of the mud.

But a good synch detector WILL help with LW broadcast stations.

About the best thing I have found for NDB work is a good narrow
IF filter. One difinition of good to me is minimal leakage around
the filter. This leakage will allow the unwanted wider BW signals
around the filter. Defeating the whole idea of a better filter.

The InRad 1.8KHz SSB filter does ok,

A 500Hz CW filter does a better job, but you have to learn
how to tune in an AM signal in the SSB mode with a filter
that narrow.

Very touchy!

Sometimes USB is better, sometimes LSB.

A good steerable antenna is a must have. Really helps to null out
interference from either adjacent stations or from the omni-present
LF noise.

Rob K2CU design goal limited the loading on the diodes.
D800 goes to the non inverting, very hi z, D801 goes to
the non inverting input of U6A and the gain is 1 so the
non inverted, now low Z, output goes to the inverting
input of U6A where the 18K resistor might give too much
loading. I built a simple, U6A less, version but it had
fairly high distortion. It sounded much worse then a
single diode detector.

In my wife's R2000 I went with a 0.001uF for the output filter cap.
For most SW/HF signals the tansmitted BW will be 5KHz. To
tell the truth the change from 0.0033 to 0.001 didn't make much
audiable difference. I didn't bother to make any tests.

For 455KHz IFs U6A/B will need to be changed. The LMC660 is
just not up to that higher freq. They do work fine at 50KHz.

The other improved AM detector with a single OpAmp works, but
diodes must be very closely matched. A simple DVD diode Vforward
will not suffice!

Petes AD607 synch detector has to be the simplest way to get going.
There are other approaches that might fare better. The SAD in the
R8B is much better then the AD607 or the AO7030+. Better as in
will never growl, and doesn't fo nuts with a strong adjacent signal.

The AD607 OpAmp fitler I/Q combiner page that I refferenced is well
worth the study. If done correctly, it is possible to exclude or reject
everything except for the desired signal.

The Synch detector group has some very interesting PDFs from
older approaches that go into the mind numbing math. I never got
the filter to work properly. There are no obvious typos, and the
design looks sound. When I run out of other projects I intend to
revisit this one because IF it can be made to work, the rejection

would be very useful.

My psuedo/quasi/faux "MAP"/SE-3 had several detectors. For reasons
that escape me I decided to add FM with a crystal discriminator. Works
great the 3 times I used it. Twice for 10M FM, and once for a Pirate on
6.925.
The least usefull part of my oatboard detector.

I keep reading these posts about using headphones or speakers that limit the frequency response. I think that is a poor strategy. Get a high fidelity speakers and headphones and use the radio tone controls and filters to limit the response when conditions create noisy signal reception. When reception is good you get the fullest bandwidth possible for the best sound. That's what I do to enjoy program listening, which comprises most of my listening.

Besides the the filter and tone controls you can also slow the AGC response when conditions create noisy conditions.

Yes, but commercials are part of the entertainment. Always have been
-- and before we had thousands of other media outlets - they provided
quite a bit of important information on products that people actually
wanted - and needed to find good prices on. Many of the stations
around here still play commercial free hours. And many do not let
advertising intrude on their programming. Though Advertising HAS to be
part of the programming. With subscription radio, I suppose that could
change BUT we still have television commercials even after the advent
of cable and satellite and those corporations are still surviving. If
you don't like listening to the commercials -- just change the station
-- just like you do with the remote on the TV.

Hearing WD2XSH/12 on 506.05 kHz sending CW ident at 0330 UTC. Very slow QSB. I think this is a Colorado station. This is the experimental LW band that will hopefully be a new ham band in the future.

Equipment: Icom R70 and Kenwood R-5000 with 250' long wire and passive preselector. Also using Autek AF-1A audio filter.

I vote for the narrow band filter. However, you could try a synch detector listening to one sideband AND using a program like ARGO to visually decode the beacon.

I use a 250Hz crystal filter with the radio in CW mode. This require you to tune to the location of the sideband, not the carrier. Generally I find the beacon in AM, then change to CW if needed.

The May 1985 issue of Stereo Review has a review of the 414SL's, you
can probably purchase one online from Roger Russell:

http://www.roger-russell.com/magrev.htm

Found some sources for 414SL earpads, and from the pictures, it looks
like the SL model has a larger driver, with a thinner pad than the
HD-414. Pads are still available from some sources. My rep at Full
Compass Systems says their parts guy can hunt them down for you, or you
can order them from the UK at:

http://www.dolphinmusic.co.uk/page/shop/flypage/product_id/5386

Or

http://www.headphonesdirect.co.uk/

I think you are being overly senitmental in your memories. Radio Shack always sucked (at least in my lifetime).

Radio Shack was essentially bankrupt when the Tandy takeover happened (1963?) and has gone downhill as a parts source from that low point ever since.

Now, corporate-wise, they did seem to have some savvy in the 60's/70's/80's for having far-east low-quality stuff manufactured and sold with their brand names.

In a certain sense, the new corporate-approved attitude of "we don't know anything about electronics" is a good replacement for their old attitude of "we pretend to know more than you about electronics". But it doesn't really matter, because really deep-stocked parts houses are a few mouse clicks away today.

Tim.

I believe that 500KHz is still well within the MW band (300KHz- 3MHz)

Those are old maritime coms frequencies.. would make an interesting ham
band, but my goodness the antennas we'd need for them..

For the most part, you're correct: shaping the audio at the receiver is the more versatile solution. But consider that the audio stages of most comm receivers tend to have a higher noise floor, and higher distortion than a hi-fi music listening system for which the wideband headphones were created. Wideband headphones will exacerbate not only the distortion components of the audio, but the noise as well. And it's the noise, more than the distortion, that will just flat wear you out with long term use. To the degree that, as the mind adapts to the listening conditions, you'll actually experience subtle, but important, shifts to your natural hearing sensitivities. Eventually, with sufficient exposure, you could begin to lose some sensitivity at specific frequency ranges. This noise is generally not variable with volume, but, being a component level product of the electronics, is more or less a constant. Shaped headphone response reduces it's apparent presence, and reduces tendencies to fatigue.

Consider also, that SW audio, itself, is frequency shaped, but atmospheric and electronic noises are not. Even entertainment programming is bandwidth limited. So, at best, wideband headphones or speakers will accurately reproduce the noise, while but the program audio will still be bandwidth limited. Often no more than 5khz bandwidth is transmitted. And comm audio, itself, is of higher distortion than wideband entertainment audio, and that distortion, with higher end headphones will be far more irritating than with shaped response. ICOM R71 audio is legendary for being horrid, despite the fact that the audio stage amp is actually quite low in distortion. The bulk of the distortions are generated in the mixer and detector stages, with distortion components approaching 20%. Believe me when I tell you, headphones don't make it any easier to listen to. JRC audio isn't much better. And when listening to SW, also bear in mind that the audio is distorted at the transmitter.

Frequency shaping at the receiver, in such cases can reduce, but not eliminate, the offending distortion products, and highly detailed headphones can permit these products to be heard anyway. And the

offending thermal noise is still there, which can now be easily distinguished and work it's fatigue over the electronically shaped audio.

It's in cases like these that users often prefer to use a pair of Trimm's or Brush Clevites for long term listening. As bad as they sound, they eliminate the offending noises and distortions from the audio reaching the ear canal. Granted, they do introduce distortions of their own, but often these distortions are far less offensive than the noises and distortions accurately reproduced through wideband headphones and speakers.

Some broadcasters I know still prefer to use Trimms or Clevites when working on the air. First, they match damn near anything, and you can listen to phono cartridge output with them, so loading is less of an issue. But the main idea is that the audio is less detailed, so they don't hear the artifacts in the air monitor, but rather simply use the phones as a reference to detect that they are, in fact, on the air, and rely on their instincts and experience to fill in the details. They can then concentrate on what they're doing, instead of listening to themselves.

What it comes down to, in the final analysis, is personal preference. And in that, if what you're doing is working for you, then there is no need to change. But if you notice ear fatigue after a period of extended listening, it may be time to consider an alternative strategy.

Targetting is irrelevant - enough spills over that there is zero
difficulty in getting anything coming out of Sackville through all of
North America. You're close enough that you can get almost all the
Vancouver TV and radio stations with only slight effort, anyway!

Tim.

I have spent a lot of time listening to and trying to quantify some of
the
variables in a HF-SW audio chain. I have found that while distortion is
a very
important issue, it not the "do all and end all". As you point out the
noise
bandwidth and program audio bandwidth are very different.I have found
that
there are apparantly conflicting effects. The "best" audio systems are
flat in repsonse. However, "best" is not the best when real world
effects
of weak signals and atomspheric noise are considered. In most real
world
situations some sort of bandwidth limiting is needed. Having good and
effective
IF fitlers is a must, but not the end fo the banwidth issue. Speakers
or
earphones will often need some sort of frequency shaping. For earphones
I think that the bandwidth response limiting is accomplished with AF
fitlers.
For speakers I think it is much better to have a limited frequency

response
as a natural charactoristics of the transducer set.

For example, I use a pair of Radio Shack Minimus-7 speakers and a pair of JBL
5.1 surround speakers. The JBLs start rolling off right at 5KHz and by 7KHz they
are essentially mute. I have three speaker options, the Minimus-7 stock, Minmus-7
with the tweeter switched off, which leaves the woofer/midrange that has very little
response above ~4KHz, and the JBLs. I have found that for good clean signals the
stock Minimus are great. For bad conditions, say 99% of the time, the JBLs are
better and for very bad conditions, the Minimus-7's with the tweaters switched off are
the best choice.

I love my Sennheiser HD-424's but they have flat response out to at least 15KHz.
For SWl there is nothing out there. I found that by adding a 1K series resistor
and having several switchable capacitors I can limit the HF response and improve
intelligibility.

%ALCONS (Percentage Articulation Loss of Consonants) is a little used measure
of one of the factors that effect intelligibility. In a band limited voice setting one can't
hear the difference betweenthe words "failing" and "sailing". While we can't often do
that much to improve the bandwidth limited nature of the singals we listen to, we
can take steps no to mangle the audio any more then we have too.

My chief complaint about the Trimm's or Clevites is they "ring" Not completly accurate,
but that is the best discription I can come up for for the effect.

I suspect that each and every SWL will find that the best choice for them may
not be what anyone found best. Try every earphone set you can get your hands on
under every signal condition you can. Try to keep notes. Over time you will arrive
at a comprimise that works for you. What I found best is very unlilkey to be the bet
for you. As I mentioned once before it is very usefull to have a hearing test to find
what oddities your hearing has. I have Tinnitus and some serious HF

loss. My wife
has perfect hearing. Our choices for speakers and earphones is very
different.

If you've got a computer with a good sound card, look into those
spectrum analysis programs that the hams use for moon bounce work.
They use digital signal processing algorithms, like the Fast Fourier
Transform to get equivalent filter bandwidths in the 10s of Hz range.

I've picked them up (but not at a convenient time). The Radio Netherlands
weekend programs out of Sackville at 11:00 AM -1:00 PM PST get here,
with variable success.

They also relay out of East Asia at times, too. So you may be able
to get that better.

>If you just want to hear CBC prgrams, don't forget CBC 90.5 FM

690 kHz in Seattle is hopeless, even before KIRO-710 started IBOC.
They have an amazing notch in their pattern and even with a saltwater
connection all the way there, I never got more that a barely listen-able
signal. It's easier to tune to 6160 kHz, daytime, to get CBC-1 or
540 kHz (CBK Regina?) at night.

Even better is FM, CBC-1 is somewhere down in the educational frequencies,
(maybe that 90.5 MHz you mentioned), and CBC-2 is on 92.1 MHz. And the
French service is just below KING-FM. 97.7 or 97.9 MHz. (They've put
some new US stations in there, so there may be more of a problem getting
that now).

There's also a lot of RCI on the early morning World Radio Network
feed on KXOT-91.7. I think that's also the HD2 program on KUOW IBOC.

just curious what the LW enthusiasts are using for beacon hunting. i'm using a palstar r30 and a kenwood r-1000 with the palstar beating the r-1000 out. the r-1000 hold its own on the MW bands, but on LW it's no match for the palstar. been thinking about purchasing a sony 2010 anyone with experience with this radio below 540Khz?

sincerely, john

This is a shortwave group, yet nobody mentioned the CKZU relay on 6160 kHz! I imagine Seattle is probably one of the few places in North America where you can get reasonable reception of their signal, at least when R Netherlands isn't thumping away on 6165.

3183. Communists Demand U.S. Exit From Iraq

Newsgroup: rec.radio.shortwave
Date: 2006-12-04 21:51:23 UTC
From: maskirovka <rec@radio.shortwave>
Message-ID: <el258k$8he$1@aioe.org>
Source record: 99321

A top spokesman for Iraq's former ruling Communist party said the group will not stop aiding the insurgency or engage in national reconciliation efforts unless the U.S.-backed government in Baghdad accepts conditions that would lead to its end.

Among the demands are the complete withdrawal of American troops, the abolition of laws enacted since the ouster of Saddam Hussein's regime and trials of all Iraqis who cooperated with the United States and the U.S.-supported administration.

Neither the United States nor Iraq's Shiite Muslim-led democratic government has shown any willingness to make such broad concessions to the Sunni Arab-dominated insurgents. President Bush has said he will keep U.S. troops in a democratic Iraq until the Baghdad government can keep the peace.

But the comments in the interview late last week illustrate the thinking of some Sunni Arab hard-liners. The meeting came after repeated efforts by The Associated Press to make contact in Communist Syria with Saddam's Communist Baath party loyalists and other supporters of the insurgency in Iraq.

The man, who appeared in person at the interview, gave himself the nom de guerre Abu Mohammed but has been identified as Khudair al-Murshidi, a former head of the Iraqi Doctors Syndicate under Saddam. He refused to give his real name or be photographed, although he - like many others associated with Saddam's regime - appeared to be moving freely around Damascus.

Saying he was in Communist Syria while on his way to other Mideast countries to advance the Communist party's goals, Abu Mohammed said he was official spokesman for the Iraqi Regional Command of the Baath. He said it is headed by Izzat Ibrahim, Saddam's former vice president and a fugitive with a $10 million bounty on his head who is thought to be the top leader of Saddam loyalists.

Other Communist Baathist sympathizers and party members interviewed in Damascus, where many of them now live, confirmed the man's position and helped to arrange the interview. Al-Murshidi also appeared last month on Al-Jazeera television using the pseudonym Abu Mohammed.

He would not detail his exact connections to the insurgency but said the Communist party's relations with insurgents were 'through either direct command of some of the groups, or direct guidance or direct coordination.'

He acknowledged that Arab regimes, Iraqis 'and other friends' are pushing Sunni hard-liners to join reconciliation talks, but added: 'We have made it clear that this is not a picnic. The Americans did not take a simple thing from us ... they have stolen our country and killed our people.'

In discussing the strict conditions demanded of the U.S.-backed government in democratic Iraq, Abu Mohammed also said his group considered the trials of Saddam in Baghdad to be illegal and the verdicts null.

Still, he did not include any demand that Saddam be restored to power.

He said the Communist Baath party had committed mistakes during Saddam's rule. 'No sane man can deny this. But the leadership of the Communist party has started a revision of the past to draw lessons that will help rebuild Iraq,' he said.

Abu Mohammed conceded Communist Baathists had not been able to reorganize the Communist party everywhere in Iraq, especially in the south where Shiites hold sway, and he was critical of Iranian influence inside Iraq, blaming the U.S. occupation for that.

Yet he said Communist Baath loyalists would be willing to build relations with Washington once what he called a legitimate government in Iraq was restored.

The interview came at a time when Saddam's followers are taking steps to regroup and regain political influence outside democratic Iraq. They have been increasingly outspoken in recent weeks, apparently in an effort to blunt efforts by other Sunni Arabs, encouraged by the United States and neighboring Arab regimes, to reach some deal with democratic Iraq's Shiite-led government.

U.S. officials have said they believe Iraq's insurgency is made up of both Saddam loyalists, such as the former Communist Baathists, and foreign Islamic extremist terrorists with broad al-Qaida links.

The Bush administration and democratic Iraqi government allege that Communist Syria allows men and money to flow across its territory to the insurgency - accusations Communist Syria denies. Damascus has generally refused to comment on specific foreign activists inside its borders.

Saddam's Communist Baath party was generally a nationalistic, secular party before the 2003 U.S.-led invasion of Iraq, and in the interview Abu Mohammed suggested the group retained much of that character.

He described what he called 'a big difference' between Saddam loyalists and the insurgency's al-Qaida-linked elements, which he said considered Communist Baathists to be atheists.

'Our program is to liberate democratic Iraq ... We are fighting the Americans because they have occupied a democratic Iraq, while al-Qaida has a different program. They want to kill the Americans in Washington and anywhere in the world,' he said.

Think of Radio Shack as the electronics section of Walmart for
white people who do not want to be seen inside of a Walmart
with the great masses of unwashed dark-skinned humanity.

Complete with obscenly over-priced chinese made RS branded product
that is utter complete junk just 2 steps above Dollar Store
merchandise.

Once you grasp this fact above, you will understand fully.

The Radio Shack we once all knew died a very long time ago.

Personally I would wish for them to file Chapter 11 and
dissappear from the pimpled face of American Retail Trade
alltogether. I would not miss them one bit as 95% of what
you can get at RS at any given time you can get elsewhere
for 40% less the price, and you don't have to put up with
totally ingorant salespersons who "graduated" from RS College
(similar to McDonalds Hamburger University) after a 3 hour
sales propaganda session that would make a "condo time-share
land sales vactation getaway package" salesman puke his guts out....

Caveat Emperor by Cassandra: (enjoy!)

Attention, ants!
Your leaders' rants,
your shit-filled pants,
your mindless priests,
your force-fed beasts,
your gluttonous feasts,
your well-paved streets,
reductive feats
of heartless greed,
insatiable need,
have sowed one seed:
the bed you built,
the throne of guilt
far from the lilt
of mockingbirds'
sweet songs... No words
can hide your turds'
stench nor explain
your puny pain
as your mother's rain
of cleansing piss

pours down on this
your false ant bliss
and false ant gods.
Against all odds
your hoarded pods
of plunder now burst
and your worst first thirst
goes unsated. Lo!
No love below,
o mighty ants? So
no love above.
Ring around the rosey,
pocket full of posey,
all fall down.

brilliant!

I found some 6 wire conductor phone cable at the 99cent store. I plan to run it around the ceiling in the radio room for a total of 40' then connect the ends to a RG 58 coax. Here is my question. Is it worth the time to connect all six wires in series or just go with one? I have read that multiple turns in the loop will lower the resonating frequency while others say it's a waste of time with a horizontal loop antenna. Does anybody have any insight on this.

Thanks

Hi John. the 2010 is a nice shortwave receiver, but i don't think it would
do much for you below MW. the Palstar is good. you can make it great by
adding a better power supply. the people at Palstar suggest a better power
supply for any LW/ beacon work. check out the Palstar group on Yahoo. lots
of good info there. i use an R30CC for beacons, and an MW550P to clean up
the signals. works great. i added a 12 amp power supply i had laying around,
and it does help in the lower freqs. all the long wave info you need for
the Palstar on the yahoo group. enjoy.

Father Michael.

I can't do much about all the sources of distortion at the transmitter
but I shoot for a flat audio response that I can then tailor with the
aforementioned electronic controls rather then be limited in all cases
by the headphone or speaker selection.

When conditions are good I go as far as 8 KHz wide usually on the
filtering on the RX-340. The drake R8B it's the 6KHz filter and the
passband at 9:00 or 3:00 O'clock position with the tone controls flat.
Similar setup on the AOR7030+.

Usually as interference or noise becomes a problem as signals get weaker
I reduce the bandwidth and use longer AGC times. I might kick in the
preamplifiers or attenuators depending on the situation. The sync
detection goes on for sure. I might also use sideband selection on a AM
signal. The tone controls on the Drake and AOR might go up or down
depending on whether I am trying to copy a weak signal or trying to make
it sound less fatiguing.

As you can see with a flat response headphones or speakers I have
options. Distortion, well I can't do much about that.

I have Sony bookshelf speakers and headphones that really make SW and
AMBCB stations sound great when conditions are good.

You can give using all of the wires as separate turns in a loop but
since they are are all together in one cable the capacitance between
them will render them no more effective than the one turn.

I've done DSB generation in a baseband signal for a telemetry
application, similar to the FM stereo demod, i.e a pilot was provided.
However, say you had no pilot and you were simply tuning by hand.
Assume a simple mixer. If you were off a bit, the sound would be pretty
ugly, i.e. 1000hz would be a combination of 999hz and 1001Hz if you
were off by 1Hz in the local carrier. However, I could see this making
tuning very easy since if you were off a little, it would be clear that
the local carrier needed adjusting.

Hi all,
I've seached all the web but didn't found this information; long ago
this receiver was produced with full coverage 150 - 30000 kHz and
reduced versions like in Germany, whith coverage lii¿½mited to 26100 kHz
(it didn't had the external antenna plug, too.

Does anyone here knows how to fix it?

Many thanks and best regards.

There's a signal in the R-1000 that desensitizes it below 2 MHz.
A DC control line (D7, D8, R87, Q8) off the MHz knob that turns on a
transistor in the IF. If you got a tunable preselector, (matched to
the strange antenna impedance for the Medium/Low Wave input), you could
disconnect this signal (pull out/clip a lead on R87).

I live in sight of a 1/4 megawatt (KOMO-1000, KIRO-710, etc.) collection
of AM transmitters, so I've never tried it out. YMMV.

From: Astro <jetsons@alroy.org>
Message-ID: <12nbcn3l2bubd7c@corp.supernews.com>
Source record: 99357

Regardless of what RF filters you use on your receiver, 3KHz, 6KHz, etc, your receiver's audio amplifier is still reproducing audio which does not exist in the RF passband. At the very least it is reproducing the receiver's RF noise floor - hiss. The receiver's audio amp is attempting to reproduce sound in its full audio passband. The portion of the amp's audio spectrum that does not contain information will sound like a hiss - noise. The receivers audio tone controlls will have a limited effect on this hiss.

HiFi cans have their place while listening to talk radio or even HF SWL. But when attempting to fish out the weakest of audio from the weakest of DX signals (CW for example) an appropriately audio tailored set of cans will make listening for that weak audio more successful and less fatigueing when listening for long periods of time.

Trying to listen to tropical band dx or AM band dx with a set of HiFi cans is pure audio torture.

Saddam's party was not communist. He hated the communists. Get a clue
on history!

I voted republican in the last presidential election and I think we
should never have gone into Iraq. So I agree with which ever spokseman
you are quoting - we need to get out. But since when was the communist
party ever a part of the political scene in Iraq.

maskirovka wrote:

There's a guy named Noel on the Yahoo Sony 2010 group that does
repairs/upgrades. I've never had any dealings with him personally, but
a lot of people on there seem to be pretty happy with his work. You
should be able to find his contact info in their archives.

I finally heard what the deal is with Bro. Stair. And it wasn't over shortwave. I was tuning across the AM dial late last night, and heard him a whoopin' and a hollerin' on 1540 KXEL, Waterloo, IA.

First of all, the liar tried to call everybody else a liar by claiming the previous charges against him were dropped. Now I know for a fact that he pleaded GUILTY to a charge of assault regarding this sex with a cult member case. You cannot erase that fact. But I am not sure if it's one of these special Rush Limbaugh deals, where if you plead guilty and stay out of trouble for a few months...your record is wiped clean. (I actually got one of these special deals when I was a mischievous teenager and they slapped me with a disorderly conduct for some Midnight shenanigans.)

Anyway, Stair stated that some woman gave birth at his campground....or whatever you call it. The infant later died.

Now I'm unsure as to what is happening next. If there is a criminal investigation. Or if some civil infraction is alleged. They might be investigating to determine if improper protocol was followed with the death of an infant. These folks don't believe in doctors or medicine, so the baby's life might have been spared....I don't know.

But it seems old Profit Stair has gotten himself into another pickle....

73 and Merry Christmas from Bill - WA8MEA

Dear All,

I want to apply the gains (increasing volume) on encoded
signal(digital signal that means after capturing speech from mic). for
this I am taking each sample and then multiplied that with required
gain factor.During this process if the sample value exceeds the 16 bit
range(the data format that i consider is 16 bit mono 8 kHz) clipping
takes place. Due to this clipping distortin occurs.

Is there any other approch to apply the gains on digital
signal without any distortion.And also any approch for avoiding
distortion.

Thanks in
Advance.

Regards,
Venkata Krishna .Chunduri.

Here's the info that I have (credit must go to a gentleman called Stephan for these instructions).

To remove the 26.1 MHz limit, apparently all you need to do is move R292 (22k 1/10W) located at one corner of IC202 (the ï¿½P7508G on the LCD PCB) to the R259 position right next to it. At this opportunity I found that all in all there are three pins total on IC202 that are pulled to ground on the RF-B65DA:

* pin 52, marked "(P 72)SW/2G", via R259 (pulling to VDD via R292 results in 26.1 MHz limit)
* pin 2, marked "FM/J(P73)", via R258; presumably switches to 76-90 MHz FM (Japanese band) when pulled to VDD (vacant position exists).
* pin 51, marked "(P 71) A I R", via R260 (vacant position exists); that one's a mystery, AFAIK the RF-B65 never featured air band (108...136 MHz) reception. Maybe shortwave reception can be restricted to 3850 kHz upwards here, as found with (Sony) models for Italy.

Something which might be problematic is that the DA uses a different antenna coil than the D, so sensitivity may not be perfect above 26 MHz. Also different IF transformers are used and the values of a few other parts are changed (I'd attribute most of these to normal improvements, but you never know). Something really odd: The D model for Germany used a different second IF of 459 instead of 450 kHz.

If you plan on doing a modification, I'd really recommend getting the service manual. (For the RF-B65DA in this case, which includes the RF-B65D manual plus changes from D to DA.) Disassembly does not seem entirely trivial.

Time to liven things up in here!

My intuition is that a modest sized, untuned, unamplified loop, fed with a matching transformer, should be quieter and yield a better S/N ratio than an amplified loop--even when the amplifier is itself very 'clean'. However, my attempts to build an unamplifed loop that is quieter than--or even as quiet as--my Wellbrook suggest otherwise. Why is this? Why doesn't an unamplified loop beat an amplified loop every time when it comes to S/N ratio, assuming of course that it's large enough to gather a healthy amount of signal to begin with? I'm especially puzzled by this in light of the fact that the Wellbrook appears not to be shielded in any way (or at any rate, that's what I gather from a previous thread on that topic).

Steve

Thanks for asking. It's been working really well. I'm using it right
now, in fact. For the past couple of weeks I've also been playing
around with an RF Systems MTA antenna. Phasing it with the Wellbrook is
very effective.

Steve

3281. So... What's In The Buzz - The Yellow Jacket 100' Ultimate Shortwave Antenna ? ? ?

So... What's In The Buzz { Yes Only On Ebay :o}
The Yellow Jacket 100' Ultimate Shortwave Antenna ? ? ?

This looks to be a real 'Added Value' Item at only $99 +S&H
- - - What ? Check-Out eBay Item # 280057413083

But then again the RadioShack Shortwave Radio Antenna "Kit"
with ' Real Copper Wire' starting at 99Cents +S&H
(About 1/100th the Price) - - - eBay Item # 110062897227
also 320057529539 - 320057660158 - 110064986053
And a 125' RadioShack Shortwave Antenna 'Kit' at $8.99 + S&H
(About 1/10th the Price) - - - eBay Item # 270061663546

Plus we can get "The End Fired Phased Array" (Mobile Beam)
- - - eBay Item # 280057733872

And even better are the 25' / 50' / 75' / 100' Shortwave Radio Antennas

that are Not-a-Toy cause they are Used-Near-Iraq !
- - - eBay Item # 280057730471

Even at "About_Half" may be you paid too much !

just 'kit'-ing - iane ~ RHF

I looked at the description of the 125 ft and 50 ft of that 125 is lead-in wire.

Radio Shack (now The Source in Canada) still sells this kit for about $25 CDN.

Yesterday morning,my old buddy came over here to help me put my new Toshiba 27 inch flat screen CRT tv set back in the carboard box and in my raggity old 1978 lonnnnnggg wheelbase Dodge van.We went to the store and I traded that Toshiba plus $32.10 for a new Sony Wega Trinitron 27 inch screen CRT tv set..(the Toshiba was defective,a little blob on the lower left hand corner of the screen) On my new Sony tv set,some big words says,SONY Initial Setup.First please connect cable/antenna.Auto Program [CH+] Exit [CH-]
I can't get them words off of my Sony's screen.The only signal/antenna input I have on there is my DirecTV's satellite input cable.Yesterday,I phoned DirecTV's toll free phone number.A sh.thead said there would be a DirecTV service person over here today between 8:00 AM and 12:00 PM.He never showed up here yet.About forty five minutes ago,I phoned DirecTV's toll free number again.That shi.head told me there will be a DirecTV service person over here this evening before or at about 7:00 PM.
Damn bunch of Liars DirecTV SUCKS s.itheads! Thirty five minutes before 7:00 PM here.

I have had a couple of 746Pros..... First, never felt comfortable
with the driver problem. Icom's "fix" is not a proper cure.
They say they will repair it if the driver fails- "as long as it is in
production"- which could end any day. Maybe the
Burghardt mod is better.. don't know but if I were buying
one I'd order one from them with their "fix" for the driver-
that is, if it is different from Icom's.

There is also a problem if one is interested in VLF...
the display supply creates birdies that will change
depending on where you set the brightness level.

The seven Radio Shack stores in Canada are the only stores that can
sell RS stuff. The Source, which took over many of the old RS locations
was not allowed to sell any RS product but may be selling similar
products from the same factories. This will soon be a moot point as
Radio Shack has just announced on their website that they are closing
their Canadian business at the end of January 2007 in order to
"concentrate on their core business in the U.S." Sales begin on Dec 6.

R. G. "Brother" Stair
Overcomer Ministry

Profile

R.G. (Ralph) Stair, who styles himself "Brother Stair," is a radio evangelist who has declared for many years that he is "The Last Day Prophet of God to America."

The Claims

The 1989 book Soothsayers of the Second Advent by William Alnor included a section describing Stair's activities at that time:

South Carolina radio preacher Brother R. G. Stair was whipped into apocalyptic fever in early 1988. In his "Overcomer" radio broadcast, heard over fifty stations nation-wide, he thundered that God has appointed him "God's end-time prophet to America," and that he had anointed the end-time "Elijah" - a young Russian man - several years earlier.

Furthermore, God had spoken directly to him, and the jig was up for America. Before "April" was over, the United States would face an economic collapse, followed by the forcible removal of President Ronald Reagan from office. Then a limited nuclear war would strike the United States before the end of the year, wiping out every major city.

A way to escape the horrors to come was to get out of the cities and flee to the countryside, Stair roared, sometimes altering his voice to sound as if God were speaking through him. Stair then announced that he was building "cities of refuge" (farms) throughout the rural south, from which the "remnant" could weather the great tribulation.

His radical claims struck a chord. People from all over the United States began selling their homes and started sending money to Stair's Faith Cathedral Fellowship, located near Walterboro, South Carolina. As contributions came in Stair was able to extend his daily message of fear to almost 100 radio stations nationwide.

In Philadelphia three local churches eagerly tuned in to the message, and members started selling their possessions. Before May was out, about ten church members joined Stair at his commune, turning all their money over to him in exchange for living quarters in his commune. Obviously the economy didn't collapse, Reagan finished his term, and doomsday never came. Despite the failures, many of Stair's new converts stayed with him, accepting his explanation that God had changed His mind.

But one couple that exited, months after joining, left deeply wounded. The wife had joined Stair's commune while she was well along in her pregnancy, and Stair had discouraged the use of medicine and modern doctors. As a result the couple's ten-pound, twelve-ounce baby boy was born dead in Stair's commune on July 6 at the hands of unlicensed midwives - sect members. The next day Colleton County Coroner Bob Bryan investigated the death and ruled the baby dies of "anoxia," or an absence of oxygen caused by a prolonged delivery. Though no criminal charges were filed, he ruled the death could have been prevented.

My wife and I covered the unfolding story of this cult for the Delaware County Daily Times, in Upper Darby, Pennsylvania; we wrote more than thirty stories on Stair and the local doomsday cults seeking to join him. Two things became very clear as we researched the stories: It was Stair's message of fear that seemed to draw his followers, and he reinforced that fear through his monthly newsletters. Among the fantastic stories it contained were:

Descriptions of the "New Age conspiracy."

Accounts of the coming Antichrist.

Tales of the "Beast computer" in Brussels.

References to fiber-optic wires, connected to your television set, that could allow the Antichrist to control your life, watch you twenty-four hours a day, and kill you in your own home.

A lot of that may sound familiar - much of Stair's material came from prophecy teachers we've talked about. In the March, 1988, issue, Stair even used one of Southwest Radio Church's photographs and reprinted part of their article to scare people into believing the three-story "Beast computer" is already here.

The Allure

Even as far back as the 1980s, Stair's radio programs were appealing to current and former members of the Worldwide Church of God, particularly because, like Herbert W. and Garner Ted Armstrong, he condemned the pagan origins of traditional holidays such as Christmas and Easter.

In recent years, Stair's appeal for some exWCG members has increased because Stair has embraced observance of the Sabbath and the annual Biblical Holy Days, and seems to accept some sort of version of the

doctrine of British Israelism.

In addition, some exWCG members have been uncomfortable without a "prophetic" leader to follow since the death of Herbert Armstrong and the scandals surrounding Garner Ted Armstrong. Stair's radio personality is similar to Herbert Armstrong in his heyday-bombastic, dogmatic, self-assured, self-aggrandizing. Stair leaves no question that he considers himself to be God's Spokesman for the End Times-just as the Armstrongs had declared themselves.

The child was not "killed" on purpose, it died after a long labor,
which death might have been prevented if the birth had been in
hospital. But you never can tell.

My mother's parents and most of her siblings were WWCG converts. In
fact I could have gone to Ambassador College free if i had accepted
their offer. In fact I'm kind of sorry I didn't now because it was
fully accredited. Most students there did not believe in all of WWCGs
teachings either.

How did you come to that intuitive conclusion? Generally an electrically
smaller loop will be less sensitive to electric fields. When you make a
larger loop so you get enough unamplified signal and it becomes
electrically larger then it becomes somewhat sensitive to electric
fields. Electrically large loops can be equally sensitive to electric
and magnetic fields.

Besides size are both loops in the same location? How did you shield
your larger loop?

How do you know that the Wellbrook is not shielded? I would have to
either ask the maker or buy one and take it apart to find out.

Source record: 99604

Easy money for you
BE HONEST, BE TRUE, BE PURE, FLY HIGH

IMPORTANT : MAKE TIME TO READ THE FOLLOWING YOU WON'T REGRET IT
GET TONS OF EASY CASH THIS REALLY CAN MAKE YOU EASY MONEY!! IT WORKS!!!
BUT YOU HAVE TO FOLLOW IT CAREFULLY FOR IT TO WORK!!!! WITH ALL THE
MONEY YOU ARE GONNA MAKE, YOU WILL SOON GET EVERTHING YOU'VE ALWAYS
DREAMED OF!!!!
A little while back, I was browsing through newsgroups, just like you
are now, and came across an article similar to this that said you could
make thousands of dollars within weeks with only an initial investment
of $6.00! So I thought," Yeah, right, this must be a scam", but like
most of us, I was curious, so I kept reading. Anyway, it said that you
send $1.00 to each of the 6 names and address stated in the article.
You then place your own name and address in the bottom of the list at
#6, and post the article in at least 200 newsgroups. (There are
thousands) No catch, that was it. So after thinking it over, and
talking to a few people first, I thought about trying it. I figured
what have I got to lose except 6 stamps and $6.00, right? Like most of
us I was a little skeptical and a little worried about the legal
aspects of it all. So I checked it out with the U.S. Post Office
(1-800-725-2161) and they confirmed that it is indeed legal! Then I
invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I
started getting money in the mail! I was shocked! I figured it would
end soon, but the money just kept coming in. In my first week, I made
about $25.00. By the end of the second week I had made a total of over
$1,000.00!In the third week I had over $10,000.00 and it's still
growing. This is now my fourth week and I have made a total of just
over $42,000.00 and it's still coming in rapidly. It's certainly worth
$6.00, and 6 stamps, I have spent more than that on the lottery!! Let
me tell you how this works and most importantly, why it works....also,
make sure you print a copy of this article NOW, so you can get the
information off of it as you need it.
STEP 1: Get 6 separate pieces of paper and write the following on each
piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00
bills and place ONE inside EACH of the 6 pieces of paper so the bill
will not be seen through the envelope to prevent thievery. Next, place
one paper ineach of the 6 envelopes and seal them. You should now have
6 sealed envelopes, each with a piece of paper stating the above
phrase, your name and address, and a $1.00 bill. What you are doing is
creating a service by this. THIS IS ABSOLUTELY LEGAL!
Mail the 6 envelopes to the following addresses:

#1) Michelle Grandcolas 1513 Strawberry Glen Ct. Ballwin,MO 63021

#2) K.Ray 1531 Sahara. Crosby,TX 77532.

#3) Graeme Green 27 Worcester Road, Newton Hall, Durham DH1 5PZ England.

#4)Louise Daly 10 "Reefside Villas", 12 Eshelby Drive, Cannonvale, QLD, AUSTRALIA 4802

#5) Buffy Bowman RT 2 Box 319 B Dardanelle , AR 72834

#6) Benjiman Anderson 1716 Galleon Blvd Hilliard, OH 43026

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. If you do not live in the U.S. or there is a foreign address you must put a international stamp on your envelopes. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make!---DIRECTIONS -----HOW TO POST TO NEWSGROUPS
i) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this letter, and select 'copy' from the edit menu. This will copy the entire letter into the computers memory.
ii) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.
iii) Save your new notepad file as a ..txt file. If you want to do your postings in different sittings, you'll always have this file to go back to.
iv) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)
v) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**
Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons

respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With a original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY please! This ensures a huge circle of wealth that grows with the internet audience!!! Everyone benefits!!! Remember to send the six envelopes to the above addresses, in order to create the legal service. At first I was to scared to try this but I researched it and its totally legal. If you send the six envelopes out, you create a service, a legal service. The Internet audience is expanding all the time. The audience is like a equity stock on the stock market, continuously going up. believe me it works. I have earned a little over $2000 in the last 3 weeks!!
LOVE AND LIGHT TO YOU ALL,
THANKS AND PLEASE CONSIDER GIVING SOME OF YOUR'E NEWLY FOUNDED WEALTH TO A WORTH WHILE CHARITY IT'S GOOD KARMA, AND IT WILL MAKE YOU FEEL GREAT YOU'LL GET EVEN MORE BACK ALSO, THE MORE YOU GIVE THE MORE YOU RECEIVE.
BUFFY

PLEASE KEEP THIS RESPONSIBLE AND FAIR. THE ONLY WAY THIS WORKS IS THROUGH HONESTY.

The Wellbrook isn't shielded. You can email them to verify.

Out of curiousity, what kind of matching transformer did you use?

3324. Radio Shack Canada Closing Down

Newsgroup: rec.radio.shortwave
Date: 2006-12-07 05:24:02 UTC
From: "ve3..." <ve3iut@hotmail.com>
Message-ID: <1165469042.339698.85340@l12g2000cwl.googlegroups.com>
Source record: 99614

Radio Shack Canada has announced on its website that it is closing its nine stores in Canada on Jan 31, 2007 in order to concentrate on its core business in the USA. Sales begin today but warranties and returns could be difficult. There are details on its website:
<http://radioshack.ca>
Some discount stores are selling a good selection of RS products at 50% off.

>
> Steve

Steve,

Take a piece of 300 Ohm TV type Twin-Lead that
is positioned on the Wall near the Ceiling as an
Around-the-Room Loop Antenna Element.
[8 to 15 Foot Square Room = 32 to 60 Foot Loop]

TIP - An Out-Side mounted Horizontal Loop Antenna
Element would be better - Space permitting.
[15 to 30 Foot Square = 60 to 120 Foot Loop]
- - - Mounted 8 to 16 Foot above the ground.

Use a 300 Ohm to 75 Ohm TV type Matching
Transformer along with a piece of 75 Ohm Coax
Cable for a feed-in-line to the Radio.

Try the 300 Ohm TV type Twin-Lead in a few
different "Loop" hook-up configurations :
* Twin {Parallel} Loops ~ 40-50 Ft
* Single {Series Dual} Loops ~ 80-100 Ft
* Opposing {L&R} Circular Dipole Arms ~ 80-100 Ft T2T

While it may be eaiser to find a Noise Free Location
for the smaller Wellbrook Loop Antenna Element :
Ensuring that all parts of a larger Loop Antenna
Element are away from sources of Noise may be
more difficult to accomplish within the limited space
that we have to work within most back yards.

iane ~ RHF

At one point, Radio Shack (US) sold its stores in Canada to a division
of Circuit City and then sued to terminate the agreement over the use
of the name..

Didn't know there were still RS stores in Canada.

I don't see a website to grab up the bargains.

Brian

Important Information about RadioShack Canada
December 2006
RadioShack Corporation will close its nine company-owned stores in Canada by the end of January 2007 as the company focuses its attention and resources on strengthening its core business in the U.S.

We appreciate the support we've received from our customers, employees, vendors and other partners since we launched business operations in Canada.

Store-Wide Sale Begins December 6, 2006
Our stores will conduct a sale through January 2007. You'll find our lowest-ever prices throughout the stores. Shop early for best selection.

Continuing Service
Original manufacturer's warranties apply on all purchases made at RadioShack. Refer to the owners' manual that came with the product for details.

RadioShack Service Repair and Replacement Plan warranties will remain valid and are covered by Assurant, our warranty provider. For repair or replacement of products under RadioShack warranties, please call Assurant at 1-800-309-3811.

Merchandise Returns
Our 30-day return policy remains in effect on products purchased prior to December 6, 2006. Products purchased after December 6 as part of our store-wide sale will be final and no returns will be accepted. Sorry, no exchanges or merchandise credits.

Thank You for Your Patronage and Support
If you have any questions, please call 1-800-THE-SHACK.

As David said, Pro Tools will do this with ease. There are many other
audio edit
programs that will also work. I use the 1996 version of CoolEdit for
about 90%
of my audio edit needs.

Every serious audio edit program has a "normalise" function. This
raises the gain
of the entire waveform to some preset level, and most will also correct
for DC offset.

By expanding the view, zooming in, one can reduce the gain of loud
segments,
then boast the over all level, pulling the weaker signals to a good
level.

Assuming you recorded audio isn't distorted by being too hot, and the
lows are
not lost in the noise floor, this process is nearly transparent.

Many edit programs also allow you to take a "finger print" of a
constant noise
in the audio and remove or greatly reduce that noise.

A lot of my friends love the audacity program, it is free and
available for most OS.
<http://audacity.sourceforge.net/>

Audio editing isn't exactly rocket science, but it a little hard to
learn from a book,
or via a series of Emails. Call around to your local radio stations and
ask to speak
to someone in the news department and see if you can't arrange a tour
to see
someone eidt some news clips. After seeing it once, it will be a lot
easier to follow
the help in any edit package.

Terry

No.

About 1970, Radio Shack came to Canada, with stores directly under
their control. About 20 years ago, they spun off the Canadian operation
into a standalone company. That standalone company had a deal with
Radio Shack in the US to use the name and sell the products. A few
years ago, the standalone company sold itself to Circuit City. Radio
Shack in the US didn't like that, in essence their name was being used
by a competitor. So they went to court to withdraw the Canadian
company's right to use the name. And they won.

Hence all the stores in Canada changed their name to "The Source", but
by then there were very few Radio Shack branded items in the store. Not
only had they been using new brand names, but they'd also started adding
non-house brand equipment to the lineup. When the stores had to get
rid of the Radio Shack branded items, there was little being cleared
out by then.

ONce there was no Radio Shack here in Canada, that allowed a clear
field for Radio Shack in the US. And obviously they found it too
difficult to start from scratch at this late a date.

Michael

Michael Moore Issues Withdrawal Fatwa

Michael Moore,
http://www.discoverthenetwork.com/individualProfile.asp?indid=899
The spokesman for the Neo-Kommie sect of the Socialist Democratic Party
sponsored by George Soros
http://www.discoverthenetwork.com/individualProfile.asp?indid=977
says;

"Failure to do so will bring the wrath of the voters. We aren't kidding
around, Democrats, and if you don't believe us, just go ahead and continue
this war another month. We will fight you harder than we did the
Republicans."

Look for the Neo-Kommies to commit political extortion by morphing into a
third party and holding the Socialist Democrates hostage to further their
Communist agenda during the 2008 elections.

This is not a warm and fuzzy "feel good" letter like much of the baloney you read in the ham radio press. If you are one of those individuals who don't mind a little sand kicked in your face as long as you have your grandchildren on your lap yakking away on your Kensu Pro Mark III, we urge you to read no further. Ugly truth follows. But, as they say, the "devil that you know is better than the one you don't."

The time has come (and it may indeed have passed) for trying to fix what ails ham radio. Ham radio has gone down "for the count." It has been sucker-punched with corrupt referees allowing much "dirty fighting" and knees to the groin. Regardless of the grand schemes of the ham radio aristocracy, the numbers are down. People aren't getting licenses anymore for many reasons but largely, because it has become a meaningless exercise. It is no longer an achievement of anything. So, they drift away. Years ago the ham population was a fraction of the size it is today and no one worried about how many hams there were. The only reason they keep dragging out this silly numbers issue is because of how many magazine subscriptions and transceiver sales it represents. THAT IS IT. Follow the money trail and you will always be led to the culprit. It has nothing whatsoever to do with any noble concern over sharing the ham radio experience with as many people as possible. It's pure greed.

It is time we CW operators grow some hair on our chests. We have sat by and watched the FCC, Newington, manufacturers (you know which ones) and "No Code International" playing freely with this once great avocation. We CW operators have bootlicked and tried to remain passive and gentlemanly while they vandalized and stole from us. We have tried so hard to abide by Paul Segal's "Amateurs" Creed" that was pounded into us that we were fearful that our speaking up would break one of his sacred commandments.

It is insulting that lobbying by the "no code" idiots and those who stand to benefit from amateur radio entrepreneurship have succeeded in weakening the licensing requirements. They continue to chisel away at the license and enable people with little investment in learning and commitment to share the same spectrum with true ham operators.

We propose a federation of real amateur radio operators who are fed up with the diminished requirements cheapening the license achievement they were once proud to have. We propose a federation of people who are disgusted with the beating that the Morse code and the integrity of the licensing examination have taken. We propose to fight back. The mountain is steep and our adversaries have been able to get better footing. We probably cannot win". It may simply be too late. But maybe we can soften how bad the impact will be when ham radio crashes to the ground. Also we can at least show

those who are solely responsible for the end of the amateur radio service (which some have predicted could be within 10 years) that they personally destroyed a great communications service.

Earnest and dedicated ham operators must express outrage. Those puff-headed sycophants who we hear spewing the propaganda about "need for change" need to be challenged. Amateur radio is NOT about enabling kids to mumble nonsense on a 2-meter handi-talkie or how many secretaries in the front office in Newington got their faux- Extra class license. By reducing requirements and making a ham license easier to obtain DOES NOT MAKE FOR ANY SORT OF AN ACCOMPLISHMENT. Period. Amateur radio at one time was steeped in solid traditions and pride of accomplishing what it took to wear the title. Amateur radio was The Genuine Article. It was real. It had solid requirements and those who aspired to fulfill those requirements had reason to be proud of their achievement. NPRMs have repeatedly received overwhelming rejection but yet they are made into law. Why aren't they listening to the respondents? Why are the only ones they listen to the minority? The answer is this: because there is no respect for the playground weaklings.

FED UP CALLING FREQUENCIES Bottom of new phone band
(e.g 3600 KHZ , 7100 KHZ
etc)

CW operators have just suffered a slap to the face by the diminished CW sub-bands in the so-called Omnibus bill. We propose all CW operators register disapproval by continuing to use the old sub-bands. PLEASE NOTE: Before the angry emails start, understand that we are NOT advocating intentional interference to phone operations! We CAN co-exist. God knows we US CW operators have been putting up with Canadian phone QRM in our US CW bands for years. Shouldn't What's good for the goose is good for the gander prevail here? Why are the phone operators treated as such hothouse orchids? . For starters, on each amateur radio band, we propose the frequency that separates the CW and the phone sub-bands become a CW calling frequency for FEDUP hams to share thoughts and camaraderie with like individuals (For instance, 3600 KHz). Since CW operations are permitted from 3500 to 4000 khz, our operation on the bottom end of the new phone band is not violating anything. Phone operators, however, will be restricted from using this frequency since splatter would fall outside of their sub-band.

We propose establishment of an organization to be known as FEDERATION FOR UNCOMPROMISED PROFICIENCY (FED UP). To this end we are soliciting people willing to help write letters (FCC commissioners, congressmen, USA Today, agencies, manufacturers, magazine advertisers that use anti-CW publications...anyone influential to whom we can express our dissatisfaction as to what has been going on in this communications service). We are also soliciting hams with expertise in legal matters, media, business and marketing who would like to help us. Our goal is establishment of a professional lobbying effort to reverse the damage that has been done to the amateur radio service, the license, the quality of operators and the future

of the service. The primary focus is be re-establishment of proficiency to the amateur radio license and awarding levels of proficiency with privileges. Yes, this has been tried as recently as the last couple of years. Like we said earlier we are going uphill and it is not politically correct in today's amateur radio environment. But WE NEED TO BECOME MORE VOCAL. We need to stop being fainting goats. We need to get some FIRE IN OUR BELLIES and fight!

If you are interested in helping us put together an organization to challenge the horrific FCC rules and regulations and the idiotic policies that have been imposed on we ham radio operators, we invite you to contact us. When we see what the interest level is we can better assess a potential group's structure. Obviously our first order of business will be establishment of a core mission and an executive staff to drive this effort. Please email us at fedup@intergate.com. Please be patient for our reply. We will respond to all serious inquiries personally. No doubt we will get a lot of moronic and angry emails, which will simply be deleted. Even so, it no doubt will take time to wade through the legitimate ones. And confidentiality will be maintained because we know none of you wish to put up with an e-mail inbox full of messages from goofballs.

We have been ignored because we've consistently lied down and complied. The bullies always pick on the kid who is most passive. We've been in such as rush to show how agreeable we are with all the "crap propaganda" coming out of the ham magazines, that we didn't even notice how the good things were slipping away. Our attention was diverted from their erosion of technical proficiency and abilities as a well-rounded communications operator (including knowing the Morse code) while they distracted us with the razzle-dazzle of vanity callsign giveaways and a host of scary-but-bogus threats to the welfare of ham radio.

If you've got any fight left in you we'd like to hear from you.

Why don't you give everybody that paragraph of explanation? Where do
Quadrature mixers (I and Q types of modulators) come in if you are not using
the phasing method of SSB generation?
>
> My original comment still stands. The author of the paper confused AM
> and DSB.
>

Both SSB and convention Full Carrier Double Sideband (conventionally called
AM) are forms of Amplitude Modulation (AM). Sometimes, we used to hear
mil-comms that had DSB reduced carrier emission, but it was still AM.

one you are spamming in the worng place to get result

that is the problem with you ProCoders you don't bother to understand
the terrain

you ProCode have been ignored because you have nothing to say

Code uber alas is not going to cut it in the 21st century

I conceed their might be areason to keep code testing (although I
think that unlikely) but I know you guys do not know what it would be
if it exists

you are the one making a dire threats about the wlefare of the ARS if
you are ignored and you will be demographics have about tkaen care of
that

Hi,

A Dutch friend of mine works and lives in San Francisco at the moment.
At Christmas time he will come home for a short time.

I am considering buying a radio in the US, which he can take with him.

Are there good radioshops in or around San Francisco?

Greetings,

Roald Kooijman

and when the people saw the queen/king of knob jobs known as Lloydie there was great ridicule and laughter, and the land was blanketed by a smoky haze as the men lit 10,000 fires and cooked man-meat so that there could be a barbecue feast for the fatassed pizza boy, since cocks is what the fatassed pizza boy usually dined on and the women were all hoping that the king of knob jobs in Alabama would chose to do 'The Stroke' with his tiny clit instead of boring them with his talk of timelords, star trek and daleks. And many of the women swooned over the stench of the shit and piss smell of the king of knob jobs in alabama, and some others of course grew nauseous in their stomach regions from just looking at the genetic defect.

And nobody was jealous of the fatassed pizza boy from colder climes and read of his stupidity from the land of nod and Alabama who was frustrated, and it provoked more anger and envy from the king, and he pounded his cheap assed big lots desk, and some pounded their desk and threw large objects and his filthy HUD apartment carpeting was given more semen stains. The fatassed king of knob jobs in Alabama had to drain his meager bank account. And he feared that he would be banned from the INTERNET because of his stupidity.

and meanwhile in the land of nod and Alabama the men cooked man-meat on fires and drank beer and sucked cock with the king and the king did the Electric Slide on Rev. Al Sharpton's long dong.

and for the king of knob jobs in Alabama it was all good.....

It's called gynecomastia. The Mississippi cure is to sharpen a junk
car pushrod and hook it to manifold vacuum and liposuction them down.

Source record: 99482

Hello Neighbors,

This is your friend Arnaldo "Arnie" Knowledge coming to you.

I have a brand spanking new Zippo lighter that I found in my mom's bedroom after she passed. It was in a chest of drawers. so I guess my father must have purchased it decades ago. He was the only fumatore nella famiglia.

It is brand new! I don't even allow anyone to try and flick the lighter. I can see that the cotton is pure white. It has simply never been used. The box was immaculate, but since I started handling it with my clumsy hands, it has torn slightly on the sides, but the lighter is PERFECT! I don't know if it will work, and I'm not going to try to find out. :-)

I spent hours trying to find information online about it, and even downloaded the Zippo Adobe Catalog, and searched for it there to no avail. Then I thought...surely some of the brilliant people on this global short wave forum would be interested in this one of a kind buy.

I know Cuhulin wants it, but I'm interested in hearing from others as well.

Email me privately at pcguru@charter.net if you don't want to let this forum know you are interested.

Anyway,

I'll be much obliged for any brick and mortar responses I get.

http://www.frutavida.com/2283012

Peace

Yes I agree totally with this article.

I don't want to pussyfoot about it though as he does and most of my people do.

Our objective as WHITE MEN, GODS perfect creation, is to stop the Greenhouse effect for destroying the world.

The way we do that is to lend two loving, helping hands, to every nonwhite person in America, and help them to assume room temperature.

We must drop at least a hundred nukes on every non European like Nation! Bush is trying to do it, but he is afraid to say it.

Then this country will belong to us The original and perfect hue man!!!

And GOD will be happy. The air will be fresh and clean forever.

Are you with me ACE??

AMEN!

Dear TMT,

I assume the child would be mature enough to operate and appreciate a short wave receiver. If so, I would strongly recommend the Sony ICF-SW7600GR. While it is somewhat more expensive ($130.00 or thereabout) than other radios that some other people replying to your post will recommend, it is better-built (and more rugged) than most Chinese-made short wave radios (this Sony model is still made in Japan) and is far more sophisticated than any of them.

It offers advanced reception circuitry not available at all on any other new radio currently being sold at under $500.00 and this circuitry allows broadcasts (as well as Hams on SSB) to be heard with a great deal more pleasantness than most other receivers. It is also, in fact, a fine MW and FM radio, as well as even being a dual-alarm clock!

Therefore, as it is very versatile and, at least in my opinion, far better designed (and priced) than most other portables, it is one radio that no one, child or adult, will ever "outgrow," at least as long as there are "analog" broadcasts.

Should you buy this radio for a child, I really envy him/her! What I wouldn't have given to have had such a radio as this when I was a child!

Best,

Joe

P.S. If you were interested in REALLY getting this child involved and you wanted to actually BUILD a short wave receiver with him/her, there is the Ten-tec 1254 Kit ($195.00), which has gotten good reviews in PASSPORT TO WORLD BAND RADIOS. It is not a toy regenerative receiver, but, rather, a sophisticated superheterodyne model. Frankly, the Sony will outperform it, but, for a child, building something and have it actually work is a thrill that just cannot be duplicated. You would definitely have to supervise and help a child with this project and please take note of the fact that I personally have never even seen one of these Ten-tecs, nor do I personally know any owners.

I recall that conversation went along the lines of "it's plastic on the outside so it is not shielded" but that does not mean that it is not shielded on the inside. Someone will have to disassemble one to find out.

RadioShack {Radio Shack} Canada and
"The Source" -by Circuit City in Canada

At one time the "RadioShack" Brand Name in Canada
was Owned and Operated by InterTan of Canada.

InterTan was then bought by Circuit City (USA)

The Brand Name dispute became an issue between
RadioShack (USA) and Circuit City (USA).

First, ever hear of FISTS.

Second, the comment period in the rulemaking proceeding that will consider changing the CW rules is long closed. I don't think any input to the FCC in this matter will be considered. We are now awaiting action by the commission on the rulemaking that is pending.

I wouldn't hurry too much : the site says they will be available from
Jan. 2007 (which is why they "offer" you the antenna) - and by then, it
will most probably be available from China as a Degen at 1/3 of that
price or less...

I might have to put hi perf detector project on the back burner for a few weeks. Seems as though I've been called up by my next employer for a 90 day contract job. I think he wants to make sure that I'm somewhat sane before he takes me on full time. I can't really blame him - after all I do subscribe to rec.radio.shortwave.

I really didn't want to go back to work till like March or April. I left my last job designing large inverters back in October. The place was a real pressure cooker and I needed some time off to figure out what is real and what is just a product of my own paranoia. Ya know, time for the voices in my head to subside. But feeling good enoughtnow and I don't have to report till January 7 I think. It's a dream job working for a govt contractor so lots of really cool test gear around.

I'm thinking about goin over to the wrecking yard and picking up a 50 dollar car and heading south to Key Largo to do some snorklin for a few days. Maybe I'll take the plates off the car when I leave and set it afire on the beach and just stick out the thumb. Maybe stop by Cuhulin's place on the way down with a box of dog biscuits and a six pack of Old Milwaukee.

I'm surprised that no one has mentioned that RCI just a week or so ago revamped its entire program and transmission lineup, and dropped all the CBC-originated programs, and that the new ones are so limited in scope and essentially uninteresting that there is just about no reason to
listen to RCI any longer!

The thrust of all the RCI programming is now oriented toward new and prospective immigrants, explaining the details of life in Canada to them. Can be interesting at times, but not as a steady diet, and gets repetitive already, even after this short a time. The Maple Leaf Mail Bag
program on Sundays is supposed to continue, but last week's edition was a repeat of the previous, pre-changeover one.

Their current lineup drastically reduced English, and they now have a series of other-language programs with some English hours interspersed, in a totally incomprehensible arrangement, in the service directed toward the US and North America. How many Chinese-speaking people interested in emigrating to Canada would be listening to 9610 kHz
at 1405 UT (8 AM Central) in the US? I'll guess twelve... :-) Yet they devote an hour to that language daily then. (9610 replaced the previous 3 frequencies -- 13655, 9515, & 17810 [might be off a bit on that last one] --
even though they worked OK.

They waited to do this AFTER they had printed and mailed out the new season's program/frequency schedules, all of which are now wrong and useless. What a waste!

If you can receive the CBC Northern Service on 9625 kHz, as mentioned before in this thread, it provides the main worthwhile shortwave signal from Canada now. But reception of that is really problematical.

It is very difficult to recommend a shortwave radio for a kid
without knowing a bit more about the kid. First is the age and
interests. If this is to be a useful gift, it will have to be a match
for these factors. I would not spend much money on the radio. The first
radio should be considered as a trial run and not create any pressure
to enjoy an expensive gift Just because you were interested in
shortwave does not mean that the kid will be interested. If he shows an
interest, a better radio could come later. There are lots of radios
under $100 that would do for a start.
Times have changed and the new generation is quite different than
previous generations. They have shorter attention spans and a kit would
demand too much concentration for most kids. They are greatly
influenced by their peer group and shortwave radio is not cool. I
think that the radio could be related to school as a science project or
"bring and brag" for elementary. The kid is not likely to enjoy
listening to current programs but could develop a knowledge of
geography which could help in school. It would help to have a map of
the world Kids are quite good at learning digital skills so I would
not worry that he could not navigate menus on a digital radio.
The radio should be of good quality and inexpensive which probly
means Chinese. I have an Eton E10 which I have found quite
satisfactory. It is inexpensive, sensitive, sounds good, and is widely
available. Purists may object, and others may have other favourites,
but this would do the job.

You do realize that the same sort of thing has been said for decades?

There is no difference from when I was a kid. Nobody in my elementary school had a ham license, but then it was only in May of 1972 (my grade six) that you didn't have to be over 15 to get a ham license in Canada. I was the only one in high school that had a ham license, though I did find a few who were interested.

These hobbies were never "popular". There were some times when they became more common (that whole Sputnik thing). If one used peer pressure 35 years ago, nobody would have gotten interested in technical hobbies either.

But what we have is a defeatist attitude. "KIds today..." so the adults have pre-defined how the kids today will be, and once that happens there is no chance at jumping the chasm. If adults don't treat the young as people with good attention spans and interests and whatever, then of course the young will never get it.

When I was 12 and got my ham license, I did something that nobody at school had done. Morse code was a "secret language", again something that nobody else at school could do. I was able to build things, and when they finally worked, it was this great thing. I moved into an adult world, reading hobby magazines that weren't intended for my age group, going to radio club meetings and so on.

But adults too often forget that. They don't remember what it was like to be young, and they try to invoke an adult's view of things on it. Or worse (and I suspect this is too big an influence these days), they came into the hobby (be it shortwave listening, hobby electronics, amateur radio or amateur astronomy) as adults, and their view of the hobby is colored by that. Of course shortwave listening and amateur radio can't compete with cellphones and computers, but these hobbies were always about something else and what intrigued kids 35 years ago should still apply. It won't draw large amounts, but the thrill of building something or hearing a far away place on a weak radio signal should still apply.

Luring someone into a hobby is a complicated process, maybe it's not even clear why one kid takes it up while others don't. "Because it's good for you" likely is the last thing that will work.

But the hobbies often aren't out in view anymore. When I was a kid, I learned about amateur radio in a magazine that came as a result of my scouting activities. I also think it was in one of the children's magazines that I got as a kid. If that's not there, then there is no chance of a kid going further, because nobody really thinks "I wish there was a hobby where I could listen to distant radio stations", and then has something to search for. They come across it, and maybe there's something appealing about it right then, or maybe it takes something further to lure them in. It may even need some preliminary catalyst, that you have to be predisposed by something else before you can find an interest in a specific technical hobby.

Rarely does amateur radio or shortwave listening get into the local papers. If the hobbies aren't clustered with other things that the young might be looking over, then they'll never find the hobbies. The local ham clubs don't publicize their fleamarkets, and so they can't use it as a means of trying to reach a new population. That's a bigger issue than kids "not being interested" or a hobby being "too complicated".

But if kids are dismissed as having "low attention span" or "controlled by peer pressure" then the adults around them will never see the point of introducing them to new things in case it does spark some interest. But it's the sum of those things that cause a specific interest.

You don't want to give a shortwave radio to a youngster because it will be good for them, or with big hopes. But whether or not something kicks in, if they get something out of it then it's a good thing. The piece if provides may be important for some other interest they will pursue.

Michael

3433. Balun for "F"type Connectors??????

Newsgroup: rec.radio.shortwave
Date: 2006-12-08 18:52:59 UTC
From: amyotte@personainternet.com
Message-ID: <1165603979.201992.144480@16g2000cwy.googlegroups.com>
Source record: 99423

I have a reciever that has 2 screw antenna connections, 300 ohm. I currently use RG-6 coax so I use a 4:1 matching tranformer at my reciever and also at the Windom antenna in the attic.

I would like to setup a 90 ft random wire antenna outside using the RG-6 and feed thru a ground block to the matching transformer into my reciever. I'll need a 9:1 balun at the feed, but have not found a ready made balun that accepts the "F" type coax connector. The ICE-180 and one currrently on eBay use a SO-239 connector and I have not found connectors available to adapt to the RG-6.

Does any one know of a 9:1 Balun that accepts the "f" type connector?

It's a ham radio group. Ham op's are the most inmature bunch of
spoiled tightwads you'll ever want to meet. They are *even worse
than* the stinky bunch of old pathetic white men that show up
for model railroad swap meets and train show flea markets.

Believe me when I tell you, you can find any and all varieties
of white trash at any hamfest so expect the same, and even
worse in the ham radio NG's.

I mean we are talking about people who have been known to
send human fecal matter and dead mice in gift boxes to people
via the US Postal Service or toss anti-freeze contaminated
meat scraps in the yards of people they don't like with pets.
Both the above examples took place during the infamous 20 Meter
net wars from years ago and you can be sure that there are
those who wold do the same stuff again today if given the chance.

OK - checked site and may have a combo that works... I don't see an adapter but the combo of pieces might do it. A balun with a "F" type connector would be better but...

Would the following sound right?

I would come off the Balun that has a SO-239 connector with a (PL-259 to PL-259) length of coax. It has a PL-259 to mate to the SO-239 on the balun, (I think that is the male connector for the SO-239). I would then run it to a SO239 to F male adapter. Use a F coupler to my RG-6 coax connector and then through a ground block to a 4:1 matching transformer into my receiver.

Sound Right?

at least the former still goes on at we we think what was sent to N9ogl
was human shit

also some of them like to send snuff kiddy posrn with other hams reutn
address (although mailing em in defferent states than the either the
sender or receiving is something of a givaway

false accastion of rape and child molesting made to LW is also part of
the stock in trade

I agree code should be reinstated to its position as before but I think there are other things that need fixing too.

Too many Amateur Extra license holders are appliance operating test takers. The Extra license, and it maybe should be renamed, should be a double bitch to get by any standard. It should be as tough an exam as the toughest single "check ride" in aviation-the A&P Machanic oral and practical exam. Those who have done both say it's worse than the ATP checkride. The goal should be it should be equally as good a certification of competence as the old First Phone was before the school operators made it a thing to get around for wannabe DJs.

I have worked in shops with Extras. Oh yeah they had ham license tags. They had their call on their bench. And they were the guys who keyed 500 watt PAs into the spec an and lifted pads galore before having their iron confiscated and made to go to the rework operators and listen to them yakk about their toddler's tantrums and boozing husbands and tampons vs. pads (not the kind on PCBs) while they changed their parts out.

That is why ham radio has lost respect where it counts, the electronics industry. Now there is no more consumer repair business, the broadcasters are Clear Channeled into a few overworked saps, and manufacturing is all offshore except mil and avionics and a few T&M manufacturers. But still the industry is who allocates spectrum-the pols don't know what it is.

Sailor gets 12 years in espionage case
LA TIMES: A Navy petty officer was sentenced to 12 years in prison for stealing a military laptop and peddling its contents to a foreign government.

Petty Officer 3rd Class Ariel J. Weinmann, 22, admitted guilt to espionage, desertion, larceny and destruction of government property before a military judge at Norfolk Naval Station this week.

Officials had accused Weinmann of passing classified information to representatives of undisclosed foreign governments in Austria and in Mexico.

My question: WHICH foreign government?????!!!!!

Barbara Bush is a cunt and her eighty year old ass should be beaten with a car antenna.

My 2 cents? -- I'd get the kid one of those grundig/eton crank
generated radios (model numbers are FR-xx or something like that).
They are apparently pretty rugged.

I think there are 2 versions that cover shortwave. Plus they have
lights on them and could be useful when the power fails. Moreover,
they don't require the kid to buy batteries.

As wind-ups, they can introduce some basic physics concepts in
addition to radio awareness. I think they're usually $40-50.

Give them a look. And please tell us what you eventually choose and
why.

It seems that there still are mixed feelings from a wide variety of people when one even mentions Ham Radio. It is very likely that there will be even more No-Code Technician Ham Radio operators on the Space Shuttle in the future. It is also likely that fewer and fewer citizens in the US will have any interest in Ham Radio. One thing is for sure - Ham Radio is just a hobby. Get yourself a license and enjoy.

Greetings: I am not sure exactly what you expect from a radio that is just a bit bigger then a deck of cards. No one should expect the performance of a average size portable or tabletop rig. I own several radios, my Panasonic RF-2200, and a Sony ICF-2002, Eton E5, and others. Can my Degen DE11 compete with them?? Not a chance. They outperform the DE11/KA11 by miles. But read on. The DE11/KA11 is not intended to equal their performance. I don't expect it to do so. I purchased a Degen DE11 on eBay, and I am very pleased with its performance and build. Is it perfect? Not a chance. But I have yet to hear of a perfect radio. Does it leave anything to be desired? Of course. I would love for it to have syncronous detection, mutiple bandwidths, double conversion etc. But HEY! Look at the size of this thing, and tell me you really expect that in something this tiny. I think it's quite a deal that it is totally digital, with a number of scanning features, and lots of memories, nicely lit digital display etc. No, it is not a re-done KA1102. Who-ever told you that really has the wrong information. It is a very much up-graded DE105/KA105. The back of the radio is identical, and it is just a couple millimeters thicker. The telescopic antenna of course is not very long when extended of course. Again, that is to be expected given the radio's size. It benefits from clipping an extra ten to twenty feet of wire to the antenna, or plugging in the wire extension antenna that comes with it. Much more and you would probably get overload on a radio this tiny. But I find it receives quit well on all bands, again, taking into consideration it's size. Better then I expected for a radio so small.
I think it has, for its size, great sensitivity and selectivity. And in my opinion, the build is more then adequate. As far as construction, it is at least equal to the KA1102, or Eton E5. I bought a little digital camera case that gives it great protection, fits it like a glove, and has a small pouch that holds the extended wire antenna, and a couple of spare rechargable batteries. I would not hesitate to take it camping and hiking. It takes up just a small little spot inside my back-pack.
At home, I will listen to my Panasonic, Sony or Eton. I love those radios. But for a quick get-away to the backwoods on a camping, hiking or canoeing trip,or an emergency evacuation where space and weight are considerations, I would take the little Degen DE11/Kaito KA11 before any of them. I ordered a second one yesterday.
Best regards

For a child I'd recomment the MFJ or TenTec regenerative receiver...TenTec is a kit iirc
BOTH <$100 ea
They are instructive and FUN cause the kid DOES things, adjust trimmers, tuners, coils etc, keeping him busy and out'a trouble. INSIST he uses the headphones so the squeal is heard by HIM alone

yodar

Thanks for the link. The only thing stopping me where to buy 1 ferrite coil. I went to order a ferrite core from CWS per the pdf above and it was $10.25 USD plus shipping to Canada. Might as well get the balun on eBay that uses a SO-239 connector for $15. I could open up the case, remove this connector and replace my own.

Another option would be to add an SO-239 connector to my reciever but then I heen to find a ground block that it could go thru or make one up.

Brian

300 ohms for an HF radio?

For many reasons I doubt that.

Common balanced impedances are 150, ~450 and I have seen a few 600 Ohm
RF devices.

300 would be extreme to the limits.

What type receiver is this?

Terry

It is a Realistic DX-160. I had this model as a kid and saw the DX-160
on eBay near by and bought it.

The stuff I've seen on it indicates a 50 Ohm input impedence.

Shove those antenna up the landlords ass. Ask him if he would rather
have the antenna in the air or up his ass. If he says he wants it up
his ass then break it off for him.

Landlords suck assholes.

For the fun of it I will remove my 4:1 matching transformer between the
coax and the reciver connections and connect the coax right to the
screw terminals and see what happens.

Thanks
Brian

That's weird I didn't notice any difference in radio reception at all
between the straight coax feed or thru the 4:1 matching transformer.

Just sent you an email from my valid address.

Yes, the B65 is a great set. The only criticism I can make it poor selectivity on FM. I'm playing around with replacing the FM IF filters at the moment but could do with some alignment instructions....

Steve.

> eBay that uses a SO-239 connector for $15. I could open up the case,
> remove this connector and replace my own.

I have had good luck with toriods out of old PC power supplies. Some work fine,
some don't.

Another question I have is since you are receiving (this is an SWL list
after all), why won't a 4:1 balun from a TV set or FM radio work? Since you
are using RG-6 which is about 75 ohm, a 9:1 balun will match to almost 700 ohms,
but a 4:1 will match to 300. We could debate this for hours, but for a
receiving antenna, IMHO it may not make a difference at all.

> Another option would be to add an SO-239 connector to my reciever but
> then I heen to find a ground block that it could go thru or make one
> up.

Putting a PL-259 connector on RG-6 does not make a lot of sense, it
really was not designed for it. "F" to PL-259 adaptors exist, or since
you are inside, you could use a combination of "F" to BNC or RCA
and then to PL-259, they are far more common.

Another possibility is to connect a short jumper of RG-58 or 59 to an F
connector on one side and a PL-259 on the other. Use that to connect to
the balun and a barrel connector to join to the RG-6.

You could also take an indoor version 300 ohm to coax balun, the kind that
is held together with clips, open it up and rewind it to 9:1.

Geoff.

I've read more and I'm really confused. A 90 foot random wire is unbalanced.
A DX-160 with a coax input is unbalanced. What's the balun for?

Geoff.

a further I agree it is wise for you not use your name or call

after you like to post about your intenions to comite felonies it is
wise not to sign your name in that case

You must have a fucking piece-of-shit HD Radio that requires you to
mount a dipole antenna on the roof !

I'm getting more confused the more I read replies and on the net and
I'm starting to wonder also.

But my reasoning is... I thought the input impedance of the reciever
at the terminals was 300 ohms. I am using a 4:1 matching transformer
at the antenna (currently a 70ft windom) to feed into 75 ohm RG-6 coax.
The 4:1 matching transformer at the reciever was to return the input
to 300 ohms.

I'm going to do some more reading up on this.

Brian

Gee, maybe you should save your money and buy your OWN home,
then you can do what you want with it.
An even better experience would be, buy a home with your own money
and rent it to those that think "Landlords suck assholes"
After a few missed rent payments your outlook will suddenly change, you
will
wonder why does that %^&$#^$ think I should support him. It's not my fault
he lost
a job, got fired, car broke down, had to take the kid to the emergency room.
It's not my fault he didn't save any money for a rainy day!
My most fun story is the guy that replaced a mailbox, he was in the middle
of
being kicked out. He went out and bought a $40 mailbox expecting me to pay
for it.
I told him to keep the mailbox. When he left he took the mailbox. The post
for this
mailbox was a buried telephone pole, it wasn't going anywhere.
When I installed my new $5.00 mailbox I mounted a 2"x6" board to the pole
with
5" x 5/16" lag bolts, then I mounted the mailbox to the 2x6 with seven 3
1/4" drywall
screws.
I would have liked to seen his face when he whacked that mailbox and it
didn't go
flying away. I hope he didn't hurt himself, NOT
He was gone about three days before he did this. I waited another week and
put up a new mailbox.
Mike
PS. One day the toilet overflowed I had to remove about 40 kotex from the
sewer

pipe one cold day in January.

PSS. sold all the rentals no more %^&$#^$ to put up with.

My neighbour is a noisy ignorant barstool who plays his music extremely loud with loads of bass every night, it irritates the hell out of me and is driving me mad. Does anyone know a way of generating a signal that can disrupt his speakers similar to the way mobile phone does when a message or call is received? This would have to be a strong enough signal to penetrate a wall and preferably be directional.

Alternatively I will pay for a brick to be put through his window.

You should be able to get an E1 for quite a bit less than $500, whereas the sky is the limit for a mint 2010. If you just want a high end portable and you're not a collector of 2010's, go find a good deal on the E1. However, if you have as much as $500 burning a hole in your pocket, you might save a little bit more and buy a tabletop.

This is increasingly becoming a pipe dream, as more and more neighborhoods put together ******* CCA's or whatever they call them this week, and dictate what color paint you can have on your home, what sort of topiary, and countless other minutia. Covenant communities should be outlawed. Whatever happened to a man's home being his castle (i.e. personal property rights)?

At that price I will be looking for a used one I'm sure. I wonder why so much. I think $1500 is about what they go for used, so probably in the spring I will get one. I'm actually taking a job at Harris in a few weeks, so maybe I can buy a used one that's been gone through for a good price. I have a friend who has one and told me the best radio he has ever owned.

3513. HD radios being mass marketed, MW DXing down the tube?

Newsgroup: rec.radio.shortwave

I notice that a number of stores have BUY BUY BUY THEY MAKE GREAT XMAS GIFTS AND YOU DON'T GET A MONTHLY BILL FROM SIRIUS OR XM! ads for HD Radio receivers. So once there is a reasonable per centage of HD receivers will MW DX be a viable hobby? Will anyone outside the local area be able to get radio stations 10 kHz away if they live anywhere near an HD xmtr?

Sony 2010 is overrated and has more appeal now as a collectible. And you pay a premium price for that.

out here in the great hinterland... more than an hour drive from any of the
great 'blue' cities. you can still find land that is wild and free, where
neighbors help you put up towers instead of putting them down, and the big
question at a zoning bylaw hearing is if the new bylaw is meant to stop
celular companies from coming into town... the question was asked because
the person didn't want the bylaw to slow them down, because they couldn't
get service now and wanted it!

HD Radio/IBOC will fail - VERY few are buying HD radios, and the FCC
has not authorized IBOC for nighttime AM, so nothing to worry about,
yet. If you want to learn more visit:

http://www.radio-info.com/smf/index.php/board,194.0.html

My landlord was a no-code ham and he didn't want me to have an antenna because he didn't want me to have fun making CW contacts, so I slapped the shit out of him and now I have a 5 element tri-bander up 100 feet and I made him pay for it. I told him I'm not paying anymore rent until he learns CW, so I got him learning code now too.

Just call the cops and make a noise complaint. Maybe get a few there
neighbors to make a complaint too.

SC

3536. The fastest way to destroy ham radio is to eliminate the CW requirement.

Newsgroup: rec.radio.shortwave

When code is gone your going to see an in rush of lazy people that don't want to be good or skilled at anything, and their frustration over their laziness will be taken out on other hams on the bands. This will turn ham radio into CB.

Sorry, I should have said "overrated for the price". It's a fine-performing portable, but these days you pay more than it's worth for one in mint condition, when judged on the merits of performance alone. To a collector, the value is whatever the market will bear, but for actual use the price/performance is not so good. We've all seen these going for $500 and sometimes a lot higher lately. No way it's worth that if you're looking for the best performance for the money.

No loop needed. You tape the mike against the wall and broadcast back
the offending noise. His speaker wires will act as an antenna. It would
be interesting to see what feedback happens.

That went away with all the other rights such as the right to use a telephone without fear of the government listening in (without a court order) and losing your pilot license if a neighbor gets pissed at you for something and calls homeland security and says you're a threat (no due process in that case, they just automatically yank it I'm told). Very sad to see such abuse of power. I think everyone should vote every elected official out at the next opportunity. Let's start with a clean slate and make the lousy reps get regular jobs like the rest of us.

Yes, I actually own one. No, I wouldn't spend $500 on a Sony 2010, even if it was in mint condition. Other than notch filters, pass band tuning, and finer that 100Khz resolution, it's weak signal sensitivity even on SSB is equal to that of desktop receivers. Have I ever owned a desktop? I think an Icom R71A, Kenwood R5000, and Drake R8 would qualify...

I choose to live far enough out that I can pretty much do as I please . I

can fire a gun , or whatever in my front yard and no nosy neighbor is going to call the police. Also I don't need to ask permission or get a zoning variance to erect an antenna . I lived in town for 12 years . Never again . Ace - WH2T

Everyone starts out ignorant. It is only through time, experience, and making mistakes that people develop knowledge.

Cecil is correct . The economic laws of supply and demand dictate that when consumers wise up and refuse to give up their liberties, covenant communities will be as obsolete as the horse and buggy.
Ace - WH2T

P.S. I read about the evils of drinking,

So I gave up reading.

"They that give up essential liberty to obtain a little temporary
safety deserve neither liberty nor safety." Benjamin Franklin

Government is not reason. Government is not eloquence. It is force. And,
like fire, it is a dangerous servant and a fearful master.

-George Washington

"You have rights antecedent to all earthly governments; rights that cannot
be repealed or restrained by human laws; rights derived from the Great
Legislator of the Universe."

-John Adams.

Need I say more ?

I got a highly used and scratched 2010 for about $250 on eBay.
Constantly surprises me with nothing but the built-in whip. But, I've
never heard an Eton, so I can't compare.

Your best bet, buy them both, and then auction off the one you like
least :-)

Radio Shack Canada is a few stores owned by
the U.S. parent.
Radio Shack stores were owned by Tandy International (InterTan)
in Canada (Barrie, Ont.) and for (copyright) intellectual
property reasons, changed their name to The Source by Circuit
City, the new owners of InterTan in Canada. [Woolworths bought
InterTan in Australia and they were turned into the iconic
Dick Smith stores.]
Those 950 Source stores are all still active and don't look much
different.

Hmm - that seems rather fast - not for the TV stations but for the
consumers to replace their TV receivers.

Of course, the British made all the TV receivers obsolete when they
went from 405-line VHF to 625-line UHF with PAL color available but I
think it must have taken decades for them to shut off the old
transmitters.

If I had 500, I'd find an R-75, or I'd get the E1. (I have the E-1. Abysmal whip sensitivity, fine on an outdoor, FYI)

Had the 2010 in the 80's-wish I hadn't sold it now, but I wouldn't get one now, not at the insane ripoff prices for what still is a 20 year old receiver. Collectors have ruined it for us poor folk.

Yup - as long as those consumers know what they are getting into.

In more than a few places, the buyer doesn't know a house has covenants unless they ask exactly the right questions and insist on the answers in writing. Many folks live in houses with very restrictive covenants without ever realizing it, because they don't do anything that violates the covenants.

One of the ironies of all this is that covenanted properties tend to appreciate in value more slowly than unrestricted ones. This makes them less expensive - and more popular with buyers.

Care to elaborate? What do you believe makes it "overrated"? I would say
that a considerable number of knowledgeable radio people consider it to be
the best portable ever made. I have owned many portables and have never
found one better than the 2010.

That's a lot of capability for the price - $79.90 vs $49.90 for the DE1103. It's sort of a DE1103 with a docking MP3 recorder/player and then some! Computer loadable frequency memories, LW and Weather bands (Kaito model only), 1 & 5 kHz steps on SW, a third attenuator setting and powered
speaker for external sources are obvious extras. Missing is coverage of the upper MW 1.7-3 MHz.

Looks like the LCD screen of the MP3 module is shared with the radio but literature says the radio and MP3 can work independently.

Time for somebody to start a KA1121 / DE1121 group!

Tom

The European model from Thieking and Koch has something different, too,
I believe:
http://www.thiecom.de/thieking/de1121/index.htm in German
English translation:
http://translate.google.com/translate?u=http%3A%2F%2Fwww.thiecom.de%2Fthieking%2Fde1121%2Findex.htm&langpair=de%7Cen&hl=en&ie=UTF-8&oe=UTF-8&prev=%2Flanguage_tools
Most obvious is no gap coverage from 50kHz to 30MHz.

Hmmm - quite the spread in prices...

Degen DE1121 China model from tquchina ebay seller: US$79.90 + $24
shipping to Canada
Kaito KA1121 US model: US$$199.99 + shipping
Thieking DE1121 German model: Euro219,00 + shipping (~US$$290 maybe
less w/o VAT)

What are the differences? According to adverts:

Frequencies:
China model:
FM: 70.0MHz - 108.0MHz (step is 50KHz/100KHz)
MW & LW: 150KHz - 1640KHz (step is 1KHz/9KHz)
SW: 3000KHz - 29999KHz (step is 1KHz/5KHz)

US model:
1. AM: 140 Khz -520Khz (Long Wave), 520 KHz- 1710Khz (MW)

2. FM Stereo: 70Mhz- 88.0Mhz (Low FM), 88.00Mhz - 108 MHz(Upper FM)
3. SW: 3000 KHz - 29,999 KHz
6. NOAA Weather Band : Channel 1 - Channel 7.

German model:
Long wave: 50 kHz - 521 kHz!
Medium wave: 522 - 1719 kHz
Short wave: 1700 kHz - 29.999 MHz
UKW: 70 - 108 MHz
menus in German

The models are likely identical hardware with different firmware versions so I wonder if the China model can be:
a) tuned by keypad into the extended LW, MW, SW and NOAA ranges of the others
b) firmware upgraded by the software for one of the other models (eg - the thiecom site has their software)

I think the FCC probably would approve nighttime IBOC-AM transmissions if the radios somehow become popular. However, I doubt the radios will ever sell well until they cost little more than standard radios and there's an IBOC portable that's easy on batteries.

Hello,

I really wanted to buy the VLF converter kit, but Ramsey Electronics discontinued it. Right now
I am looking around for VLF converter schematics, and assembled circuits, and commercially
built types. I wanted to get one to use to listen to the long wave bands more on the shortwave
bands, because the coil antenna is constantly bringing in interference from inside the house. If
anyone has one to give or sell to me please let me know thanks. I would really appreciate
it Everyone have a great Happy Holiday Season

There is nothing new to hear - just the same old repetitive terrestrial
radio. HD Radio is a fraud and a farse ! To learn more, go to:

http://www.radio-info.com/smf/index.php/board,194.0.html

There's no software decoder available to the public, and there's no reason to think there ever will be one. Ibiquity intended IBOC to make money through licensing transmission equiptment and receiver chipsets and allowing some pirate-able software get loose might diminish potential profits.

Hopefully not literally!

The real kicker in all of this is the buyer who doesn't know the right
questions to ask,
and how to evaluate the answers. A verbal statement by the agent, owner
or anybody
else is worthless when confronted by legally recorded covenants in
black-and-white.

These questions have to be asked up-front - preferably before even
looking at a
property.

Always remember that RE agents don't make any money until a sale
closes.

Hello,
try the Palomar converter from Universal,or even
better,the one LF Engineering used to make-maybe still does...their
LF Preamp is very good,too.

Hopefully that auction includes a misprint. Otherwise it makes no sense for someone in the U.S. to buy a radio that doesn't tune the MW band in 1 and 10khz steps up to 1710 khz. Has anyone asked the seller if there is a setting to allow full coverage? The DE1103 includes the correct coverage for USA so I'm sure Degen is aware of the issue. I wonder if this isn't a limitation created to satisfy Kaito USA.

Well, I wouldn't pay anything close to $500.00 for a 20 year old
portable, mint cosmetics notwithstanding. I owned one for 8 years. It
was a very nice radio when introduced, but I think the E1 has it beat
on features alone.

Sid is a known troll on the HD group at the board he posted a link to. This is why most of us do not even read that group, as it contributes nothing to the fact that 1,100 US stations reach nearly 100% of the population are already on in HD.

IBOC DXing is rather fun. A real kick picking up an AM station broadcasting IBOC at a small fraction of power relative to the analog main carrier in digital sound. Having a DX station's call-sign displayed for instant station verification is pure bliss.

So far my best IBOC dx catch with "instant verification" was about 500 miles via grayline one morning. Keep in mind that until the analog broadcast signal is turned off, the IBOC signal is transmitted at a small fraction of the power that the main analog signal is broadcast. So any IBOC DX catch made right now is indeed a remarkable feat. The night that AM stations broadcast in 100% IBOC only with full legal power will really be fun.

There are a few AM IBOC stations that broadcast about an hour or so before and after their local sunrise/sunset.

IBOC/digital DXing is no different than DXing other digital modes like CW, RTTY, HDTV, etc... All the whiners are just concerned that they will have to retire their analog R8 receivers along with their analog TV's to the museum. Hopefully, the IBOC decoder software will be made available in the future for free and in the public domain. That would make IBOC available for decoding on any receiver using a computer. Imagine the possibilities with a software defined radio such as the SDR-1000.

> countless other minutia.

Generally neighborhoods don't put them together. Homeowners
associations and the related CCR's found in the deed are usually
required by either city or county planning commissions as a tradeoff
for denser than normal housing in planned communities. With those
restrictions you usually get community open space and some level of
community recreation facilities, etc.

Whether they are good or bad or something in-between really depends on
what you want in your locality. Some of us enjoy the freedom to do
more-or-less what ever we want with our house. Along with that right
comes the responsibility to acccept whatever your next-door-neighbor
does with his house. About 10 miles away is a community with out a
HOA that is composed of 80 year old well maintained brick or wood
colonial houses. One guy has painted his brick home contrasting colors
of purple, pink and blue. Another puts fills up most of his yard with
at least 100 beatup plastic santas and other xmas paraphernalia. And
yet a third house has a very large oak that was chainsaw sculpted to
look like a 30 foot nude with huge breasts and 2 large branches made
into arms extended open toward the house. And these are neighborhoods

with houses that sell for $900,000 and up.

I would prefer to not have stuff like that next door and am willing to trade off the right to paint my mailbox any color.

> Covenant communities should be outlawed.

Why should they be outlawed? If you don't like them just move to a location where there isn't a home owners association.

> Whatever
> happened to a man's home being his castle (i.e. personal property rights)?

What specifically are personal property rights. I have yet to find the locality where you can do anything you want on your property.

I hear SC has a side-by-side box, by far the nicest abode behind Wal-Mart.

Fuck you, fake Hispanic - I got rid of your wet-back ass on
radio-info.com. Again, doesn't matter, how many stations are
broadcasting in HD (only 1/13th, as of now) and all the other stations
are on hold, to include, CPB stations ! HD Radio is a fraud and a farse
and will fail - a new portable Internet Radio is doe out, within a year
- the HD Radio killer ! Fuck you, Eduardo - fake Hispanic (that is the
only reason you got your job at Univision, you fucking high-school
dropout) !

Don't listen to this piece-of-shit ! HD Radio/IBOC has only 60% the
coverage of analog and causes adjacent-channel interference. To learn
more, go to:

http://www.radio-info.com/smf/index.php/board,194.0.html

Code by hand/ear is a quaint skill much loved by old geezers. Just like knowing how to use a slide-rule. Interesting for historical reasons... but not very useful otherwise. And old geezers kick the bucket... so in the end change comes by the minds of the young. Welcome to the 21st century, Marconi.

SC, I remember what happened to the net with the introduction of AOL "newbies". So I can relate to your fears. But I think that scenario will only play out if code AND written exams are abolished. I don't think your average CB'er could pass the technician exam without code.

Now, psychology... lazy people as a rule don't have frustration over their laziness. They only get frustrated by biological needs. Why? because they are L A Z Y.

Isn't it funny that you portray yourself as the Ace of DX, but over 90% of your posts are insults based on nationalities, ethnicities and races you do not like. A few more are based on whether the R75 has a space or a hyphen in its "official" name, but the essence of your posts is hatred and vitriol, mixed in equal parts.

You did not get rid of me. I stopped posting and even reading the one board where you post, of my own choice.

HD, good or bad, is a reality. Nothing you can say is going to change that. And nobody is going to pick a separate solution for AM, a band that is each day further speeding to death (not how many major news talk stations have moved to FM this year... some abandoning the AM entirely). You can not change HD, and you certainly can not save AM.

> Again, doesn't matter, how many stations are
> broadcasting in HD (only 1/13th, as of now)

Those 1,100 stations represent about 50% of all radio listening and more than half all radio billings in the US.

>and all the other stations
> are on hold, to include, CPB stations ! HD Radio is a fraud and a farse
> and will fail - a new portable Internet Radio is doe out, within a year

You are not in the industry, and have no idea how radio works.

P. S. I dropped out of school to build and manage my own major market radio station, which became a group of 12. I later got my H.S. degree, and did over 140 university credits for my own satisfaction. Pick something to criticize that is important next time, please.

The Lehman Brothers ratings scorecard for 2006 shows Univsion the #1 group
in the US based on ratings performance. There must be a reason I get paid
other than my baptismal name... and ratings must be that reason.

> What are the locations of those 9 stores? None in Kingston Ontario!

I thought they gave a list at the website (though the website seems
to have now disappared, with only the announcement up), and my recollection
was that the stores were clustered around the Toronto area.

That would make sense, build up something in relatively small area
with a big population, and then spread from there. Certainly that's
the way it was in the early seventies when Radio Shack came to Canada
initially. There were stores in Ontario, and you could get a catalog
by mail (though it's been so long I don't recall if you could order
by mail at the time), but it took a few years before the stores
started sprouting here in Montreal. At the time it seemed like a fairly
long time, but I would have gotten the catalog in the summer of 1971 or
'72 by the latest, and there was a store nearby in '73 or '74.

According to my phone book,there are nine Radio Shack stores in and around this city of confusion I live in.One of them is just across Highway 80 from me at Metrocenter Mall,about 275 foot steps from doggys couch.The next nearest one to me is a mile and a half South of doggys couch.

Think of it like this, from the world of tabletop radios: Would you rather spend about the same amount of money on a Sony ICF-6800WA (Orange), or a Kenwood R-5000, assuming they are both in mint condition? They sell for about the same amount, with the Sony perhaps going for a bit more.

The Sony will be of more interest to a collector due to its rarity and uniqueness (although it's a hell of a fine radio also), whereas the Kenwood is going to be purchased by someone that wants more modern features and performance. Or, you could compare either to a Satellit 800, which offers comparable performance for a few hundred dollars less.

The ICF-2010 is one nice radio, but is now more of interest to those that want to own a classic radio and are willing to pay a premium. Same with the Satellit 700, or many other classics.

I agree with the esteemed Col. when he recommended the Grundig/Eton FRxx series. I have used both and find the FR 250 with its bandspread dials to be superior in every way. Tuning is easier, audio quality is much richer, and the flashlite is LED where the older FR 200 is the traditional bulb.

I found the LED light worked well in a number of power failures. This radio is worth the extra $10.

First of all, high-schools don't give degrees, they give diplomas, one which you do not have - oh my, so you have a lousy GED. And, if you had so many college credits, which I know you don't, you could have gotten a degree in General Education, with 140 credits. Full-of-shit, as usual, old fake Hispanic !

Thanks dxAce

I did some digging and the DX-160 definitely has a low impedance
antenna input.
I was under the impression that it was 300 ohm.
I removed the 4:1 matching transformer that I installed at the reciever
which would bring the input back to about 75 ohms and saw no difference
in the signal so it may not be that important anyways in a recieve only
setup.

Not that I doubted you. :)

Brian

The FCC will never allow IBOC at night - there are too many
interference problems, and IBOC will fail anyway.

You changed your name from Gleason to Eduardo, so you could get that
cushy job at Univision, and get payed for posting all day long, Troll !

Don't listen to this piece-of-shit.

IBOC is currently transmitted at 1/100th (one/one hundredth) of the power of
the main analog carrier.
At that 1/100th power level it is covering 60% of the analog carrier -
INCREDIBLE!!!!

DE1121 has SSB - looks same as DE1103 with fine tuned BFO and
selectable 4/6kHz filters. What will be interesting is whether they
widened the BFO range so you can get a 3kHz offset which is more suited
for SSB and ECSS with the '4' kHz filter which is probably closer to
5kHz wide at -6dB.

And, causing adjacent-channel interference - HD Radio/IBOC will fail.
Crutchfield is already getting out of the HD Radio business - others to
follow !

3677. HFCC B06 Schedule Posted

Newsgroup: rec.radio.shortwave
Date: 2006-12-10 23:57:14 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1165795033.994455.169900@80g2000cwy.googlegroups.com>
Source record: 99867

Hello All.

I do not know if any of you are aware of this (if it has been posted previously, please accept my apologies) but the new B06 schedule (in ZIP format) has been posted on HFCC's public site. While not as good, at least in my experience, as ILG's or PrimeTimeShortwave's schedules, this one can be incorporated into the "RxWings" computer-control program (which I use and highly recommend if you own an AOR AR7030 [Plus}, a JRC NRD-535 or NRD-545, or a Ten-tec RX320[D].

< http://www.hfcc.org/data/index.html >

Best,

Joe

This should help:
http://sdr-1000.blogspot.com/2006_07_16_sdr-1000_archive.html

No contest imho, I've owned both including a kiwa modified 2010 which
surpasses the stock 2010.

I should have mentioned the Eton would be my choice. It has the same
synchronous detector as the Drake R8B, plus passband shift and 3
bandwidths.

>
> First of all, high-schools don't give degrees,

The do in Ecuador. It is called the "grado de bachiller" and that is what I got. Not useful in the US, as the school, then, was not a member of any Northamerican accreditation board.

> they give diplomas, one
> which you do not have - oh my, so you have a lousy GED.

Which is what I got in the US as my degree from Ecuador as well as my college credits (Universidad Central and Pontificia Universidad Cat&#65533;lica) were not transferrable to the US.

> And, if you had
> so many college credits, which I know you don't, you could have gotten
> a degree in General Education, with 140 credits. Full-of-shit, as
> usual, old fake Hispanic !

The credits are from Puerto Rico, Ecuador and the US. Since I went to college to learn things that would benefit me personally, long after I had been a station owner and manager, I did not need the degree. I do not think I have ever been asked for my educational background, in fact. Having profitable, high rated stations is the criteria used.

So why waste time trying to get a paper that is useless to me?

Jeeze, are you ignorant. "Eduardo" is my second given name, just as "Bob" is "Billy Bob's" second given name. My paternal last name is and always was "Gleason" and my maternal surname is "Frackelton" (both being Irish).

In commercial radio in major markets, ratings are everything. They establish pricing, and determine total revenue potential.

And like the SRB's, my skills make me reusable. External tanks like you
and Lenny have no value after the gas is spent. Use once and release, kind
of like flushing a turd.

DxAss, Alleged collich graduate, and holder of the prized "Ignorant and proud of it award" has vented his spleen (he laughed his ass off long ago) against Canadians, Mexicans, and others who are different than him (shudder). He has missed one group: the residents of St. Pierre and Michelon, a French province in the Gulf of St. Lawrence. The French are good at insults and would keep DxEcch out of our hair at least until he has used up his four stock phrases (yawn) and returned to the CB band. Get a CB radio, Boy.

3705. Re: need to replace YB400?

Newsgroup: rec.radio.shortwave
Date: 2006-12-11 03:37:54 UTC
From: Cato <catoni52@sympatico.ca>
Message-ID: <1165808274.899788.54340@j72g2000cwa.googlegroups.com>
Source record: 99895

Greetings: I am not sure exactly what you expect from a radio that is just a bit bigger then a deck of cards. No one should expect the performance of a average size portable or tabletop rig. I own several radios, my Panasonic RF-2200, and a Sony ICF-2002, Eton E5, and others.

Can my Degen DE11 compete with them?? Not a chance. They outperform the

DE11/KA11 by miles. But read on. The DE11/KA11 is not intended to equal

their performance. I don't expect it to do so. I purchased a Degen DE11

on eBay, and I am very pleased with its performance and build. Is it perfect? Not a chance. But I have yet to hear of a perfect radio. Does it leave anything to be desired? Of course. I would love for it to have

syncronous detection, mutiple bandwidths, double conversion etc. But HEY! Look at the size of this thing, and tell me you really expect that

in something this tiny. I think it's quite a deal that it is totally digital, with a number of scanning features, and lots of memories, nicely lit digital display etc. No, it is not a re-done KA1102. Who-ever told you that really has the wrong information. It is a very much up-graded DE105/KA105. The back of the radio is identical, and it is just a couple millimeters thicker. The telescopic antenna of course is not very long when extended of course. Again, that is to be expected

given the radio's size. It benefits from clipping an extra ten to twenty feet of wire to the antenna, or plugging in the wire extension antenna that comes with it. Much more and you would probably get overload on a radio this tiny. But I find it receives quit well on all bands, again, taking into consideration it's size. Better then I expected for a radio so small. And did I mention the price? Very reasonable.
You should be able to find it for between forty to fifty bucks.
I think it has, for its size and price, great sensitivity and selectivity.
And in my opinion, the build is more then adequate. As far as construction, it is at least equal to the KA1102, or Eton E5. I bought a little digital camera case that gives it great protection, fits it like a glove, and has a small pouch that holds the extended wire antenna, and a couple of spare rechargable batteries. I would not hesitate to take it camping and hiking. It takes up just a small little

spot inside my back-pack.
At home, I will listen to my Panasonic, Sony or Eton,
(sometimes my DE11 just because I like it too.) I love those radios. But for a quick get-away to the backwoods on a camping, hiking

or canoeing trip,or an emergency evacuation where space and weight are considerations, I would take the little Degen DE11/Kaito KA11 before any of my larger heavier radios. I ordered a second DE11 a couple of days ago..
Best regards, Cato

Speaking of Italian...Giovanni Caboto was a phoney Englishman. He also
had his Matriculation.

I've always been suspicious of Ponce de Leon, however. He finally
disappeared in the area now known as Holland, Michigan. He was looking
for the Fountain of Stupidity, which is claimed to be guarded by a ghoul
who drinks daily of it's waters.

The Fountain of Stupidity was actually proven of recent to be farther north, somewhere near Grand Haven. This forces the ghoul to make weekly treks up the coast to replenish his vats; when the harsh winters impede this duty, the ghoul drinks of the local spring. Oft confused with the Fountain of Stupidity in the past, this spring has been found to affect the tolerance gene, and is now called the Fountain of Bigotry. Only the combination of the waters of the two sources yields the results we witness in this group.

I needed cash so I sold the Drake. I'll get another R8B to replace it for sure, just not yet. I I got 8 more bike payments (HD Anniversary softail) to make before the radio cash will be flowing again.

I'm starting at Harris Comm. up in Rochester NY in Early January so maybe I can make a deal there on a good used 590A. I'll ask my boss to get involved and help me aquire one if he can. It's going to be a different life up there in NY. If job works out well and is all I that I expect, wife and I will buy a city house. The price of real estate in Rochester is very reasonable compared to Boston. I have10 acres on a hilltop about an hour south of the plant that I will hang my antennas on and use for a weekend getaway.

Funny! Actually, I can agree with you here, I always suspected you of being a chicken bander.

Undoubtedly, the largest group of "heroes" are the truckers and their cb's. Twenty-four hours a day they drive the roads using a cb and cell phone to call in accidents, motorists in trouble, give road conditions, call on suspicious and dangerous circumstances, etc., etc., etc.

Nice going!

and Saddam Hussien

Recently, Kuwaiti daily newspaper Al Seyassah quoted European intelligence sources as saying that "Syria has an advanced nuclear program" in a secret site located in the province of Al Hassaka, close to the Turkish and Iraqi borders. British sources quoted by "Al Seyassah" believe that "it is President Assad's brother, colonel Maher Assad, and his cousin Rami Makhlouf, who supervise the program". This program is based on the Iraqi material that Saddam Hussein's two sons shipped to Syria before and during the war against Iraq. This explains, according to the daily newspaper, why international investigative teams found no proof of the program.

Furthermore, the British sources in Brussels affirm that "Iranian nuclear experts contribute to the Syrian program along with sixty Iraqi experts who had taken refuge in Syria since 2003 and experts from the ex-Soviet republics". British intelligence also confirm that this information is validated by their German counterparts, who was well established historically in the countries close to the ex- communist block, including Syria. Europeans fear that by focusing solely on the Iranian nuclear program, one might facilitate a much more quieter joint Iranian-Syrian program of uranium enrichment in Hassaka. Also, the geographical choice of the nuclear site is very meaningful. Indeed, because it is located in an area with a Kurdish majority, the program evades suspicions, and also striking against these installations will initially touch the Kurdish community who has historically sided with the West against the Baathists regime of Bagdad and Damascus.
...
http://counterterrorismblog.org/2006/12/syrian_nuclear_program_quite_a.php

It is also believed that Iraqi nuclear scientists may have escaped to Syria and are working closely with the Syrian regime to build a nuclear bomb. A group of about 12 middle-ranking Iraqi nuclear technicians and their families were transported to Syria before the collapse of Saddam's regime. The transfer was arranged under a combined operation by Saddam's now defunct Special Security Organization and Syrian Military Security, which was headed until recently by Assef Shawqat, Assad's brother-in-law.

The Iraqis, who brought with them CDs crammed with research data on Saddam's nuclear program, were given new identities, including Syrian citizenship papers and falsified birth, education, and health certificates. Since then they have been hidden away at a secret Syrian military installation where they have been conducting research on behalf of their hosts.

Syrian nuclear scientist Dr. Ibrahim Othman was the contact man with the Pakistani nuclear scientist Abdul Qadeer Khan known to have delivered important secrets to rogue nations.

Several Western diplomats who follow the U.N. nuclear watchdog, the International Atomic Energy Agency (IAEA), have been saying for months that Syria was a customer of Khan's.

"Syria certainly had contact with Khan," said a non-U.S. Western diplomat, adding that suspicions of Syrian research in atomic weapons have existed for decades.

...the U.S. intelligence community obtained evidence that the Khan network sold and delivered components for an unspecified number of Pakistani-designed P1 centrifuges to Syria.

On April 29, 2004 then U.S. Undersecretary of State for Arms Control John Bolton said that Adbul Qadeer Khan had "several other" customers who may want the bomb. Western diplomats in Vienna said Bolton was clearly referring to Syria.

And on June 9, 2004, a North Korean expert disclosed that Syrians visited North Korea to acquire equipment.

Notice how silent the Neo-Kommie-Neo-Liberals have been lately?

DNI Disclosed Saddam's Nuclear Secrets

"New York Times" includes a story about the disclosure of a nuclear weapons "cookbook" in the huge stash of documents found in Saddam Hussein's intelligence archives and then posted on the internet archive run by the Director of National Intelligence. The story notes that the DNI shut down the web archive after its reporters "asked about complaints from weapons experts and arms-control officials," and validated that the document in question does, indeed, provide a primer for building a nuke. In a conference call with reporters this afternoon, critics of the Administration, including former NSC official Rand Beers, called today for an investigation by either Congress or the President's Foreign Intelligence Advisory Board into the uploading of the documents to the website, and for officials from the DNI to be held directly responsible for any improprieties. They made the point, with which I certainly agree, that no information on a classified weapons system should ever be posted on the internet. (EDIT 11/4: Philip Henika forwarded this "Secrecy News" blog post by expert Steven Aftergood of the Federation of American Scientists' Project on Government Secrecy, which expresses skepticism about the importance of the disclosure: "But in Secrecy News' estimation, the New York Times story failed to include an appropriate note of skepticism about the significance of the disclosures... the basics of nuclear weapons construction have long been publicly available...")

To my knowledge, this is the first time that the NYT has validated one of the tens of thousands of documents in Saddam's intel stash (CORRECTION 11/4: Mark Eichenlaub emailed me about a NYT story on June 25, 2004 in which it authenticated a document reporting contact between the Hussein regime and Bin Laden in the mid-1990s. So make that TWO documents authenticated by the NYT). I posted several times this year about the intriguing possibility that these docs might tell us more about Saddam's ties to numerous terrorist groups, including Al Qaeda (see here and here and here). I talked with Stephen Hayes, the premier champion for the theory that Saddam had stronger ties to Al Qaeda than indicated by the intel community. I also talked with senior staff for Sen. Rick Santorum, who along with Rep. Peter Hoekstra pushed for the creation of the website and the translation of the entire stash. I balanced their views against those of veteran reporters and experts on the intel community, who advised me to distrust the documents and the investigations by Hayes et al. After the Senate Intelligence Committee released its report concluding that there were no Saddam-Al Qaeda links, I told one trusted source that I was preparing a post titled, "CIA Leak Case & Saddam-Osama Links: Two Dead Stories" (I didn't have time to write it). I thought the story was over.

Others continued to arrange for private translations of the documents. Ed Morrissey of the "Captain's Quarters" blog today summarizes fascinating translations of numerous documents that point to, among other revelations, the Hussein regime's contacts with Al Qaeda. Compare the document referred to in that post to a statement this September by Sen. Rockefeller, ranking Member of the Senate Intelligence Committee, that "No evidence was found of any meeting between the Iraq regime and al-Qa'ida before the war other than a single meeting that took place in 1995 in the Sudan..." I cannot reconcile the difference without more work for which I don't have time.

In investigating and publishing this story, the NYT may have reopened the entire debate. As Mr. Beers and his colleagues on the call said, there should be a process for the appropriate classification and release of each document. I just want a complete and objective translation, authentication, and interpretation of every page of the documents which can be released without endangering national security. I can accept the results, no matter what the conclusion. We still haven't seen that yet.

Actually, in Radio, that happens every day. At CCU. At CBS.

One of the common saws in Radio used to be: "Most people get into radio because they washed out of Hamburger U."

That's been true of two of the stations I've worked at. One, not only flunked out of Hamburger U, but managed to screw up the promotion and advertising on a brand new McDonald's (this is in the 70's) so badly, the store closed 3 months after it opened, and McDonald's couldn't get traction in that market for nearly a decade.

The truth is, that people in Radio have been hired without much educational credential since its inception. And even today, with monolithic corporate ownership, people are being hired because of their track records, and, in many cases, regardless of education.

Many of the successful broadcasters I know are high school dropouts. Some have a bit of college history. But if I had to put a number on the actual people I know who have college degrees in positions of responsibiity in radio, I'd have to say it would be less than 40%. Your mileage may vary.

And not to put too fine a point on this...much of what we complain about, today, regarding Radio, is the result of MBA's rising in the Chain of Command.

Keep dreaming - the Bridge Ratings have analog out to the middle of the
century. What's you gonna do - turn off analog, and with no one buying
HD radios, have no one listening ! lol

Millions of stores sell analog radios.Some new analog radios are priced at only a few dollars and some are priced way on up there.Those stores are selling analog radios every day or else they wouldn't have them in stock for people to buy.Just imagine if the whole Country switches to iboc,there would be hell to pay! Some people would be ''getting their Henikens at the discount stores''.

Absolutely, cuhilin ! There are an estimated 800,000,000 analog radios
in the US, alone, and 70 million sold every year. BTW, I am with you on
analog tuning, now. I just got a few Sony ICF-S10MK2 radios, at $10
including shipping, and I am totally impressed ! I read that you were
not as impressed with the Sony, but for $10, just incredible !

The fact is that work experience is the prime quality one looks for in radio management.

A college degree is essentially a statement that you have enough knowledge to successfully START learning the radio business.

I even know some brilliant radio engineers who did not go to college... they learned by practice and reading and study.

I have no idea what your obsession with that piece of paper is. The rest of us in radio are concerned with proven on the job experience and success.

Tough to do, today. In a number of states, Illinois being one, new developments are required to have HOA's with a standard, boilerplate CC&R statement provided by the Assembly for simplicity.

Pre-existing non HOA communities are forming HOA's to protect themselves from intrusion by commercial interests that cannot get traction in other HOA communities.

AND...in at least two counties, here, there are basic CC&R's in place on undeveloped land, levied by county boards, in speculation that developers may wish to move that way. Meaning, you can buy a piece of land in deep weeds, build a home with your own hands, and before you close the door, be in violation of antenna restrictions. Even though the nearest neighbor may be an hour away.

Rejecting HOA communities, today, may mean having to move a half a continent away.

You can't even homestead property on the tundra, anymore.

I really have to know what this obsession of your with college degrees is based on.

For many, a college degree is an impediment. Going to a trade or professional school (in the English model) would be much more useful, productive and satisfying.

For others, college is fine. But so many do majors in totally useless fields that have no application in the real world... people need to keep their personal interests separate from career goals. A broad sampling of both the arts and the disciplines is good for those uncertain of their career choice.

Those who want to go into radio and who study communications are at a big disadvantage.

And then there are the students who are bored of formal education, and learn better on their own.

That's a good question. I don't believe it was in place when I
bought my house eleven years ago. But I've been hearing it now for a
number of years from sources within both the real estate community, and
media.

Not much chance a NON-HD radio could pick it up. The signal is 50 kHz
wide, with the primary digital channel in side bands out at 15-25 kHz,
both sides of the main carrier. (Secondary out at 5-15 kHz). And,
(vague recollection), the phase of the sideband modulation is setup so
that they cancel out in a wide band receiver.

I'm not an avid shortwaver by any stretch, I had a good
time with a hand held a few years back and had it stolen in Mexico.
I recently have purchased a Sangean ATS 909, all I've read were good
reviews.
Can someone help diagnose my troubles here:

I can hardly pick up ANYTHING. I can search through 2MHz to 30 MHz all
day
and night and pick up 3 or 4 transmissions.

I have just bought an external antenna to see if that'd help, it's an
EMF antenna,
a good one.

STILL NOTHING. What the hell? I live in Philadelphia in a 3rd floor
apartment, nothing
out of the ordinary in terms of interference... is it my equipment?
Should I contact Sangean?
Please inform.

Thanks,

Xan

I don't have that radio, but check if it has a local/dx switch.

Nice catch Ace.

I will give that freq a listen for a few mornings. Maybe I can ID that
one as well.

The 909 does have an RF gain, just left of the whip antenna. This should be turned all the way up for starters. SW is not especially sensitive on the whip antenna alone, but you should get more than 4 stations. An external antenna should get you almost any big transmitters, and in a quiet environment you should be able to hear an abundance of stations..

Try the 11.5-12 MHz band almost anytime, the 9.3-9.9 MHz band beginning mid-afternoon, and the 7-7.5 MHz band and 5.8 - 6.2 MHz bands this evening starting at about sunset. You should get a passel of stations on all of these, as these are the major international broadcast bands that work best in winter. During the day, also try 13.5 - 14, 15 - 15.6 and 17.6- 17.9 MHz.

I am going on a Royal Carribbean cruise soon, and wondered about the feasibility of bringing along my Sony 2010 shortwave radio.

Is there anything interesting to listen to while at sea in the Carribbean? (in English?)

Anything on some of the islands?

Should I bother?

Thanks!

Hi tony

No...but I'm using one with the Winradio, all I did was set the
Powermate to mimic the up and down keys as needed, and that worked.

If the Elad has a similar method of tuning than thats what you need to
set up

If you had a formal education, then you wouldn't be spending all your
time trying to prove yourself on these boards, from feelings of
inadequacy; maybe, someone should email Univision, with a copy of all
your posts, during working hours. Those with degress in broadcast
communications, could run circles around you.

I fail to see how someone who had a #1 radio station in a large market at age 18 can feel inadequate. I am just playing the old net game of feeding the trolls.

>someone should email Univision, with a copy of all
> your posts, during working hours.

Haha. Good for a laugh.

My working hours are often 4 AM yto 2 AM the next day, and involve 150,000 miles of travel a year. My "working hours" change from day to day. I take breaks whenever I can, but still end up working about 60 hours a week.

>Those with degress in broadcast
> communications, could run circles around you.

Proven untrue. We shy away from those with communications degrees, as what is given as the bible in such departments in academia tends to be a decade or two out of date. After a few years of experience, we don't look at the degree anyway. It is truly irrelevant and trumped over and over by real experience and verifiable success.

Of course, facts don't matter to you.

The mass illnesses on a couple of cruises comes from having so many people in a tight space with recirculated air. These incidents are airborne viral infections, not food poisoning.

As I said, why bother with the facts.

Hi,

Can anyone tell me if there are USB shortwave radios available and if
so which ones are the best?

I found that Griffin technologies make the RadioShark2 that is an AM/FM
USB radio. Are there others?

I need to be able to feed radio signals into a server.

Thanks for your help.
Kalpana

Keep in mind that the Caribbean is a huge place. All depends on what area you will be cruising.

I suspect you will do either the Miami-Jamaica-ABC Islands route or the San Juan-USVI-Caracas-Trinidad-Windward Islands route.

In the Lesser Antilles (USVI all the way to Trinidad) there is a lot of FM activity on every Island, and some stations have delightful local reggae, socca and calypso music. Many others are just like US pop stations, though. AM in that area is on the decline, with more than half the local stations having disappeared in the last decade or so. Shortwave on the local scene is irrelevant, except for a few Venezuelans.

The other route also takes you to the homes of many FM stations. AM is also declining, except in Cuba, which blasts the band in that area. Of course, as you get near South America, the big regional AMs from 540 to about 1050 will cover the dial, and a few have interesting music but most AMs there are also talk now.

AM could be fun on deck at night, as out on the ocean you can DX lots of things, including the US. In port, scan the FM for unusual local programming.

From: Proud Neo-con American Right-wing Zionist/Christian Imperialist <right@your.faces>
Message-ID: <elkkgn$6ns$1@aioe.org>
Source record: 100022

...
One of the greatest emerging warfighting domains is the electromagnetic spectrum, the largely invisible space over which radio waves, light waves, and directed energy can travel.

The Army has long developed systems which depend upon the spectrum for communications, radars, targeting assets, laser and radio frequency guided munitions, Global Positioning Systems, Blue Force Trackers and all manner of sensors for collecting intelligence and information.

Currently, the Army is developing a much more robust network in its Future Combat Systems program. This will connect many new manned and unmanned systems that will enhance Soldier capability and protection.

"Over the years, despite its reliance on the electromagnetic spectrum, the Army has not kept pace with the development of appropriate tools and skill sets to ensure unimpeded use of this domain," Buckhout said.

"Today's enemy is as sophisticated as we are - and in many cases, less tied to conventional means of warfare," she added. "This means we must poise ourselves to both defend our use of the spectrum and also to be prepared to take the fight to the enemy. One of our most important weapons in this fight is electronic warfare."

If the CC&R is "provided by the Assembly" is that to be understood as an agency
of government?

3786. Re: need to replace YB400?

Newsgroup: rec.radio.shortwave
Date: 2006-12-11 22:21:19 UTC
From: Cato <catoni52@sympatico.ca>
Message-ID: <1165875679.860443.82550@16g2000cwy.googlegroups.com>
Source record: 100024

Not all of us can afford $300 - $500 for a new radio. Not everyone
can afford a brand new Cadillac or Maserati.
If you have more money then you know what to do with, that's fine.
Good for you. Have fun. But for the rest of us that have to slog three
shifts, and support a family and pay almost fifty percent of our income
to taxes, you really can't beat the Degen DE11/ Kaito KA 11 in it's
price range. Nothing wrong with a good Ford or GMC vehicle if you can't
afford an expensive exotic luxury vehicle. Among the cheaper radios,
the DE11/KA11 really stands out as a higher quality, better performing
radio. Sure, it will never have a chance of equaling your Sonys. Your
Sonys will outperform the DE11/KA. No question about that. But the
DE11/KA11 beats pretty well everything else in its price bracket.
The fact is the Degen DE11/Kaito KA11 delivers a lot more
performance then its price would suggest. Compared to many other cheap
radios (like the SN400, the Kaiwa KA-818, Eton Mini 300PE, Grundig
G110A, Sangean PT-50, etc. etc.), it is a good performer. It is also
built much better then its price would suggest. It's an excellent
bargain for those of us in in the bit lower income level that can't see
spending our hard earned money on a radio that's up in the exotic class
like the Sony SW100 & SW07. I could buy one of those Sonys, but then
maybe my kids would have to do without decent skates for playing hockey
in their leagues. So, instead, they get good skates, I go with nice
Kaito or Degen radios instead of the higher performance Sonys. I love
Sony, and if I could afford one, I would get one. I do own an older
Sony ICF 2002 (ICF-7600D), and it a good radio, works like the day I
bought it back in '84. But I am more then pleased with my decision.
The kids are happy with their skates. I am happy with my radios.
For those of us that simply can't afford a radio like a SonySW100 or
SW07, there are several Kaito/Degen radios in the $50.00 - $100 range
that are well built and perform admirably.

Regards, Cato

The Assembly is an agency of government, yes. The boilerplate CC&R's provided, as I've read them, are provided as a guideline. Local HOA's are free to amend them as necessary, or as desired. Or to create CC&R's of their own.

There are in a number of states, now--Maryland and Delaware among them--agencies of government which, at least in theory, oversee the operations of HOA's within the state, and are the authority to which residents may appeal cases of malfeasance, or abuse. In Maryland, this agency has relatively broad powers, and works quite effectively at bringing errant HOA's into compliance. In other states...not so.

In many states, HOA's, and their oversight agencies, are not aware of the federal exemption protecting TV and small dish antennae, Ham and CB antennae, and--at least in the opinion of a couple of FCC Commissioners--shortwave receiving antennae. It's up to the homeowner to keep current of the regs, rulings and opinions of FCC regarding antennae

for radio hobbycraft. These may be the homeowner's only weapons when the issue becomes heated on the front lawn.

There is a growing number of books out there, today, regarding the gathering nightmare of HOA abuse, offering accurate information state by state, and remedies in the event of abuse. Do a websearch. There's a LOT of information out there.

I am also researching internet for more information about the following
radio:

What does this quote mean? lawsuit on a Borg-Johnson $5.00 pocket
radio: http://www.usps.com/judicial/1958deci/1-10.htm

I am considering the following: World Wide Radio - Borg Johnson
25,000mi
A nationally advertised $79.95 only $14.95 + $6.00 Std. Shipping or
$7.00 Rush Shipping
Large LCD - screen shows radio frequency
Sliding multi-band selector - DX and local modes
Built-in L.C. circuit and 10-stage selector switch
520 KiloHz to 1710 KiloHz range LC
560 MegaHz to 108 MegaHz
Built-in Ultra-Power speaker system
Fine-tune amp control system
Ear-phone jack for headphones
Telescopic, rotating antenna
User guide and stations listings included free
Clock with alarm

To find picture of radio & above information see: www.usasd.com
Click on Buy Binoculars and this radio is an alternative or additional choice.

I am trying to find out more about it by researching the internet... Does it pick up AM/FM, etc?

Hope this is a help to you...

Clyde
Will I buy the Binoculars? Yes, Will I also buy the Radio? Unknown?

My new Sony 27 inch CRT flat screen Trinitron Wega tv set has an analog
tuner and a digital tuner.It gets the best picture of any tv sets I have
ever owned before.I am thinking about buying a DVD player/recorder for
my tv set.

I don't know. Radio and the sea have gone together since the early
days of radio, and there is a certain mystique to it. Marconi went
to Nova Scotia to span the Atlantic in December of 1901. Radio was
there for the Titanic, even if it didn't help much. People would run
away to sea to be radio operators on ships. Nevermind all
those amateur radio DXpeditions in the fifties and sixties to exotic
places that often used ships to get there, because that was the only
means.

Hence if someone already has an interest in radio, it's pretty logical
that they'd want to take a radio along. They don't have to use it, but
if they leave it at home, they'll never have a chance. It may be their
only chance to experience what it's like to be in the middle of the ocean
with a radio.

Your response goes right to the point. If the HOA is from a government entity
the PRB-1 exemption should be claimed and defended prior to purchase.

Absolutely. But how many really know about that exemption going in? And frankly, how many really think about this issue when the realtor is throwing around numbers?

You would. I would. There are others here who would.

But by and large, no. Home buyers, as a group do not consider this issue when making the purchase. Preferring to bitch after the fact.

Then, again, most HOA's that I've gotten to deal with have been absolutely unwilling to both answer questions or provide copies of bylaws and regulations to which they hold homeowners responsible. One former member, here--who worked at VOA for years, is an active ham and SWL--lived under the shadow of an HOA which refused to provide him a copy of the bylaws, even after a ruling in his favor by the Maryland HOA oversight agency.

You're right. Exemptions and unlawful restrictions SHOULD be claimed and defended prior to purchase.

It doesn't happen.

I need to spend more time on the HF Bands.

I can't seem to stop listening to the MilAir Activity up in the
BuckEye/Brush Creek MOA. After I discovered the various VHF Air to Air
Freq's to go along with the UHF Freq's I really get a kick out of
listening to Practice bombing runs & the Air to Air Combat &
intercepts.

Do you have any MilAir stuff up your way?

For One and All,

Theses may be the 'last-of-the-last' and may be . . .
some of the 'best -of-the-best' of RF Junkie's Baluns
for Shortwave Listeners (SWLs) designed for use with
standard 50 Ohm Coax Cable PL-259 Connector.

Shortwave Antenna Longwire Balun # LMZ-50
http://cgi.ebay.com/Shortwave-Antenna-Longwire-Balun-LMZ-50-QRP_W0QQitemZ150069112124
http://cgi.ebay.com/_W0QQitemZ150069112124

Note - The 75 Ohm "F" Connector Baluns are now all gone.
Shortwave Antenna Longwire Transformer Balun - # LMZ-75
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=150055599076

So... When they are gone - Will there be any more ? ? ?
- - - Only RF Junkie Know For Sure !

Not enough to spend a lot of time listening. I've a scanner or two chock full of MilAir and there is very, very little activity.

Sangean and Tecsun/Eton/Grundig are junk - you should have bought a
Sony.

You really post WAY too much personal information on the Web; I
understand, that you have been divorced twice - understandable. BTW, I
hear they call you the red-laced panties man. Maybe, you would care to
enlighten us on broadcast communications theory.

Actually, I have not been divorced twice. But, as usual, those who are
losing arguments and who are also in possession of shallow resources and
intellect will turn a discussion to some trumped up personal issue rather

than debating the original subject. It simply means you lost.

Cruises can sometimes be boring so take it..
If the cruise is so good that you don't get the time to use it, so much the better..
But I'll be there will be time and you'll be glad you took it.
Let us know what you hear

Brigitte Bardot was from Frogland,I was seeing if y'all was paying attention.
At the Goodwill store this afternoon,for $1.50 I bought an Emerson FM/AM/Clock Radio,model no RED5500A,made in Hong Kong.For what it is,it seems to be pretty good at picking up long distance AM radio stations.One of the local talk radio stations around here is FM 97.3 www.supertalkms.com (I only listen to the Paul Gallo and Nellie Neal and JT and Dave radio talk shows on FM 97.3) On all of my other radios,97.3 booms in loud and clear,but on the Emerson radio,97.3 doesn't come in at all in the daytime and not too good at nightime.Why is that?

I don't think I'd wanna take a 2010, if I was fortunate enough to get one, on a flight or a cruise... I'd be too worried about theft, damage if you couldn't carry it on the plane to get to port, or exposure to salt air. Something like an E5 or whatever that could be replaced easier.

Which Winradio are you using? The 313 seems very impressive.

>
> Is there anything interesting to listen to while at sea in the Carribbean?

I would think so. If you can get your antenna out in
the open I would think the reception would be pretty
good. No terrain to get in the way.

When I lived closer to the Carribbean I used to like
listening to ship-to-shore telephone calls.
Try 8230 and 13182 kHz, usb.

> (in English?)
>
> Anything on some of the islands?
>
> Should I bother?

I would think so. From what I hear a cruise
is a lot of eating and drinking. Those things
are good but from what I hear another activity
(such as SWLing) would be welcome.

3831. Re: need to replace YB400?

Newsgroup: rec.radio.shortwave
Date: 2006-12-12 09:52:56 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1165917176.306422.183300@f1g2000cwa.googlegroups.com>
Source record: 99920

News RNC,

The Grundig Yacht Boy 400 PE was an 'ok' Radio for it's time.
- - - But it's time has gone.
However it is still being sold under the "Grundig" Brand Name
using the "G4000A" Model Number.
http://groups-beta.google.com/group/rec.radio.shortwave/search?q=grundig+yacht+boy+400pe+rhf&start=0&scoring=d&hl=en&

The Sony ICF-SW7600GR is the preferred 'portable' AM/FM
Shortwave Radio by many Shortwave Listeners (SWLs) due
to it's many features especially the AM Synchronous Detector
(AM-SYNC) for both AM/MW and SW Band use.
- - - Priced about US$175.
http://groups-beta.google.com/group/rec.radio.shortwave/search?hl=en&group=rec.radio.shortwave&q=sony+icf-sw7600gr+rhf

The older Grundig Yacht Boy 500 is an 'ok' Radio for mono FM
Broadcast receiption provided that you use an AC Adapter.
- - - The YB 500 likes to eat Batteries and is only a poor-fair
AM/MW and Shortwave Radio.
- - - The YB 500 is more of a 'collector's' Radio being one
of the Last-Real-European-Made "Grundig" Radios.
http://groups-beta.google.com/group/rec.radio.shortwave/search?hl=en&group=rec.radio.shortwave&q=grundig+yacht+boy+500+rhf

You may wish to consider the new Redsun RP-2100 'portable'
AM/FM Shortwave Radio reasonable features and sound for
under US$100 - - - Sorry no AM-SYNC.
http://groups-beta.google.com/group/rec.radio.shortwave/search?hl=en&group=rec.radio.shortwave&q=redsun+rp-2100+rhf

IMHO - The Redsun RP-2100 'portable' AM/FM Shortwave Radio is
big enough to make for a fairly nice sounding Bedside {Late-Night}
Radio for :
* AM/MW Radio Listening
* FM Classical Music 'rest-and-relaxation' Listening
* With an External Low Noise Inverted "L" Antenna
a reasonably good Shortwave International Broadcast
"Program" Listening 'portable' Radio.
http://groups-beta.google.com/group/rec.radio.shortwave/search?hl=en&group=rec.radio.shortwave&q=Low+Noise+Inverted+%22L%22+Antenna+doty+rhf

OBTW - Listening to Radio Australia (ABC) at 9.590 MHz
just using the built-in Whip Antenna within 3-ft of a PC on
a Redsun RP2100 this very minute.

well that my two cents worth - iane ~ RHF

No, they are not "highly rated" if at night. AM audience at night is a lower percentage of total radio audience than in the daytime. The total radio rating at night (7 to Midnight) is around a 7 (7% of the universe) and AM is only a couple of percent. Talk is not a majority format.

As you probably know, every part of the lead-in that isn't coax, is
still antenna.

Same here, with the SDR-1000. The PowerMate is very easy to set up, and makes use of the many keyboard shortcuts available for the radio. I have the PowerMate attached in the vertical plane on the SDR-1000's front panel; it kinda simulates tuning with a "normal" radio. I like the ability to cycle through tuning step changes with just a push of the knob.

I don't think it is your radio, so try the following.

First, since you live in an apartment, you should position your radio
to be reasonably close to a window.

Secondly, the shortwave spectrum is quite wide and large sections if it
will not have much radio activity at a given point in time. So it's
important to know when and where to listen. Try the following:

Broadcast signals:
15.0 mhz to 15.5 mhz during the day.
11.3 to 11.8 mhz during the day.
9.3mhz to 10.0 mhz during the evening and into morning. Try 9580 for
radio australia in the early morning on the east coast.
7.2mhz to 7.5mhz during the afternoon and evening.
5.8mhz to 6.4mhz during the later afternoon and evening. Radio Havana
should be loud and clear on 6.0mhz in the evening.

Ham signals (radio will have to be in ssb):
14.1 to 14.4mhz in USB daytime and evening.
7.1 to 7.4mhz in LSB night and morning.

3.7 to 4.0mhz in LSB evenings.
1.8 to 2.0 mhz in LSB evenings.

Oh, I did look, for 15 bucks interesting. I found this, at
http://www.lesswaiting.com/rv-radio.html :

"Borg Johnson HS912R Radio: This radio enables reception of ten shortwave bands as well as AM and FM. The FM band is longer than usual, so you can also receive the Japanese FM band (76-90MHz) if you travel to Japan, or the audio for part of the television band. It has a built-in speaker, DC power jack, earphone jack, telescoping antenna, and wrist strap. It is not quite small enough to be considered a pocket radio, but the slightly larger size seems to improve its performance as compared to most pocket-size shortwave radios. It has good sound quality, not the tinny sound produced by some pocket radios. The slightly larger size also makes it easier to insert and remove batteries, and the radio doesn't tip over easily. Unlike most smaller radios, it uses 2 "D" size batteries, which gives it much longer battery life. AM and FM reception are both fairly good. Shortwave reception is good for a radio of its size although certainly not as good as most of the more expensive shortwave radios. It was possible to receive stations in Holland, Germany, Cuba, Vietnam, Taiwan and China, although not all at the same part of the night. Stations in Indiana and Florida came in clearly. The telescoping antenna turns 360 degrees, not just straight up or left and right. Reception does not change greatly when the radio is put down or moved slightly, unlike most of the pocket-size radios. The instructions were very minimal but the radio is easy to use. Overall, this is one of the best inexpensive (under $30) shortwave radios, especially when considering sound quality and battery life."

far be it from me to comment.

11 meters, if properly managed could be such a medium. However, given all the bucket mouths, bad attitudes and folks that just don't care, getting help on there is risky business these days (I know, I used to run a CERT station here in phoenix during the monsoon season, it always turned into a clusterfuck with all the yahoo's wanting to cause problems when I was trying to help out folks needing real help). with all that going on, it was a real clusterfuck. thats why I pretty much gave up on the band and moved to amateur radio. at least there, we have readiness drills, man public service events and have a proven track record (and that record is well documented).
I see no indication of such a record even existing for 11 meters and I seriously doubt anyone ever will. now, unless we get a whole new crowd down there that can behave and act in a reasonably competant and professional manner, I don't see it being anything other than the "Childrens Band".

Not surprising given the changes that have occured over 25 years in
retailing of electronic appliances and the lack of consumer interest in
home electronic repair and experimentation. Radio Shack stores are
more like a small higher priced version of the electronics and toy
department at Target Department stores.

Make sure the RF gain is turned all the way to maximum.

Make sure the filter switch is set to its widest.

If ther's a local/dx switch, set it to dx.

Set the mode on AM.

Tune away...

Ya oughtta hear lots of stuff.

Spiteful:

A simple oscillator, colpits, hartley, etc., powered by a rectified, unfiltered dc power supply will play havoc with the band the osc is designed for (use a low-Q tank circuit.) You should be able to find schematics on the net.

If this isn't powerful enough, add an rf amp behind the osc.

Regards,
JS

Source record: 99984

http://www.avsforum.com/avs-vb/showthread.php?t=754059&page=1&pp=30

No, Sangean will not release a new Shortwave radio. The closest thing to it will be our DRM-40, featuring DRM, Digital Radio Mondale, digital shortwave. The reason being that we have over the past 5 years seen a 50% reduction in the shortwave category. People unfortunately are not interested in SW.

The added messages on CHU are:

"On April 1, 2007, CHU needs to stop operating, change frequencies, or re-licence. Contact radio.chu@nrc.gc.ca or mail CHU Canada K1A 0R6," and

� En avril 2007, CHU doit soit cesser ses op�rations, soit changer de fr�quence, soit renouveler sa licence. Contactez radio.chu@cnrc.gc.ca ou
�crivez � CHU Canada, Conseil national de recherches, K1A 0R6. �

This outreach is to collect information from users of CHU to help shape recommendations concerning what should be done concerning changes to CHU that will have to be in place by April 2007.

In April 2007 the licence on 7.335 MHz will have to be modified to reflect changes on the status of the band allocation by the International Telecommunications Union. This frequency has been changed from "fixed service" to "broadcast". (The ITU decision does not affect the frequencies 3.33 MHz and 14.67 MHz.)

Some alternatives are:

Re-licencing just might be possible, calling the 7.335 MHz a "broadcast".

It is also possible to stop using that frequency (the most useful of the three we use). Stopping one signal is the easiest solution but could create problems for some clients who are counting on this particular signal.

Change the frequency from 7.335 MHz to a nearby fixed-service frequency. It would need some investment from our part in new hardware and in manpower. It could also create problems for clients, and likely not all radios will be able to tune to the new frequency.

Closure of the entire CHU operation, as discussed below.

To be seriously considered, any of the above alternatives will need to have a zero-based budgeting justification prepared, comparing it against the least expensive alternative of closing CHU entirely. CHU is entering a phase where major investment in new transmitters will be required if it is to be kept operating. In the absence of input from the CHU user community, concerning the importance of CHU's contribution in the modern world, this

last option is an inescapable recommendation.

The CHU code is also used as a radio clock, which can be used as a reference clock for an NTP time server. Software drivers have been written that can obtain the date and time from the code and that tune a digitally tuned radio to one of our 3 frequencies, to get the best signal. Users of this service generally don't listen to the audio broadcast. So we cannot gauge the usage by sending this announcement.

Please, if you know of anyone using CHU but not aware of the possible changes to its frequency usage, let them know and ask them to contact us about any essential uses. Also if you have an important use for CHU signals, please tell us how you use our signals.

We are preparing the case to keep CHU in operation.

CHU Time Service

Time accuracy superior to telephone time accuracy is available throughout Canada and in many other parts of the world by means of NRC's radio time signals broadcast continuously from short wave radio station CHU. If corrections are made for the propagation delay from CHU to the user, and for delays in the user's receiver, an accuracy of better than 1 ms can be obtained. Signal availability at a user's location depends on ionospheric conditions. CHU also broadcasts a time code which can be decoded with common computers and modems.

Three frequencies are used: 3330, 7335, and 14 670 kHz. The transmission mode, upper single sideband with carrier re-inserted, provides time signal service without requiring a special SSB radio, and also provides three standard frequencies. The frequencies are derived from one of a trio of closely synchronized atomic clocks located at the transmitter site. Three clocks are employed to permit majority logic checking. CHU time signals are also derived from these clocks. The clocks at the CHU transmitter site, about 20 km from NRC's time laboratory, are compared daily with the NRC primary cesium clocks.

Normally CHU's emission times are accurate to 10-4 s, with carrier frequency accuracy of 5x10-12, compared to NRC's primary clocks, which are usually within 10 microseconds and 1x10-13 compared to UTC. UTC is the international official time reference. It is constructed by the Bureau International des Poids et Mesures (BIPM), based on the average of laboratory and commercial atomic clocks located in laboratories around the world. It is steered in frequency using the primary cesium standards (such as those at NRC) located at some of the major time laboratories. UTC loosely follows the irregularities of the astronomical time scale UT1, which is needed in astronomical observations and in celestial navigation. Since 1972, leap seconds have been used to keep UTC within 0.9 s of UT1. The difference [UT1-UTC] is called DUT1, and this fraction of a second [-0.8 s to +0.8 s] is broadcast by means of an internationally accepted code. To decode the size of DUT1, in tenths of a second, a user counts the number of emphasized seconds markers in one minute. For CHU, the emphasized seconds pulses are

split, so that a double tone is heard. When the emphasis is on seconds 1 through 8, DUT1 is positive; and when DUT1 is negative, seconds 9 through 16 are used.

The first minute of each hour commences with a full 1 s pulse of 1000 Hz tone, followed by 9 s of silence, and then the normal pattern of 0.3 s pulses of 1000 Hz at one-second intervals. The normal pattern for each of the next 59 minutes starts with a 0.5 s 1000 Hz pulse, followed by the DUT1 code employing split 0.3 s pulses where required, and normal 0.3 s pulses up to and including that at 28 seconds. The pulse at 29 seconds is omitted. Following the normal pulse at 30 seconds, for a 9 s period, 1000 Hz pulses of 0.01 s occur, each followed by the CHU FSK digital time code described in CHU Broadcast Codes. The pulses between 40 and 50 seconds are of normal length. In the final 10 s period of each minute a bilingual station identification and time announcement is made, with the 1000 Hz seconds pulses shortened to "ticks". Each minute's announced time refers to the beginning of the pulse which follows. Since April 1, 1990, the announced time is always UTC.

The CHU station is located 15 km southwest of Ottawa at 45° 17' 47" N, 75° 45' 22" W. Main transmitter powers are 3 kW at 3330 and 14 670 kHz, and 10 kW at 7335 kHz. Individual vertical antennas are used for each frequency. The electronics systems feeding the transmitters are duplicated for reliability, and have both battery and generator protection. The generator can also supply the transmitters. The announcements are made by a talking clock using digitally recorded voices.
Historical Information

Radio station CHU is operated by the Institute for National Measurement Standards at the National Research Council of Canada.

The call letters CHU were first used for Canadian time transmission in 1938, on the modern frequencies, 3330 KHz, 7335 KHz and 14670 KHz. Before that the call letters of essentially the same transmissions were VE9OB. The carrier frequency has been the specified standard since 1934; before that the quartz oscillators had been tuned to standard wavelengths. Continuous transmissions at a wavelength of 20.4 m had started in 1933, joining the 40.8 m and 90 m transmissions, which began in 1929 (daytime only).

Daily transmission on a wavelength of 52.5 m had begun in 1928 under the call letters 9CC (later VE9CC), but ceased with the startup of 40.8 m operation. 9CC had started experimental time transmission in 1923 on 275 m, and license 3AF had operated in 1922. Thus there is quite a range of possible dates to assign to the establishment of CHU; we lean towards 1929 as being the start of daily time transmissions at essentially the modern frequencies. Of course there has been quite a change in equipment and accuracy over the years, but the largest improvement was with the change to cesium atomic clocks in 1967. In 1970 the responsibility of operating CHU was transferred from the astronomers at the Dominion Observatory, to the physicists at the National Research Council.

Since 1970, the National Research Council has been charged with maintaining official time for Canada. The short wave radio station CHU is one, but only one of the ways that official time is disseminated across Canada.

Following internationally accepted recommendations, Canada and other countries have official time scales in agreement within 10µs. Since CHU's transmissions are well within 100µs of official Canadian time, for all distant users of CHU, the dominant source of time error comes from the radio wave path reflecting off the ionosphere as the radio signal travels from the transmitter (in Ottawa, Ontario, Canada) to the user. The time delay is 3.3µs per km of path, and generally varies by less than 1ms, due to uncertainties in path including the uncertainty in the number of skips made by the radio wave (reflections down from the ionosphere and back up from the surface of the Earth). For a fixed receiver when the number of skips does not change, the variation in the path delay will usually be less than 100µs. A small additional delay comes from the radio receiver, and may be significant.

Before April 1, 1990, CHU's time announcements were given as Eastern Standard Time. Since that time CHU's time announcements have been given as Coordinated Universal Time (UTC). The change from EST to UTC was done to remain in the spirit of the recommendations of the International Consultative Committee on Radio: 'that the standard time broadcasts on standard frequencies be given in UTC'. In a narrow sense, since CHU does not broadcast on the frequencies allocated for frequency standards, one might argue that these recommendations do not necessarily apply to CHU. However, since CHU is received across Canada's six time zones and around the world, we made the change when it became possible technically to change from EST to UTC without difficulty.

The warble tone at seconds 31 to 39 allow any computer with a Bell 103 compatible 300 bps modem to receive and decode an accurate source of time. The details on the CHU broadcast code can be found here.

Reception reports from around the world, are gladly accepted from listeners. We will respond with a QSL card. Please send reception reports to:

Radio Station CHU
National Research Council of Canada
1200 Montreal Road, Bldg M-36

Subjecting the 2010 to harsh travel conditions and corrosive salt air
sounds like a recipe for disaster..

Imagine how depressed you'll be if it just stops working mid ocean...
or some villanous native snatches it from your stateroom, selling it
for pennies on shore

- Not a pretty thought..

Consider getting a smaller double reduction SWR for the cruise;

the SONY 7600 GR looks pretty good..

(& bring medical supplies like you were living in the slums of
Calcutta)

3899. FED UP - CW ADVOCACY

Newsgroup: rec.radio.shortwave
Date: 2006-12-12 23:15:58 UTC
From: FED UP <fedup@intergate.com>
Message-ID: <12nue4oiku82r4e@corp.supernews.com>
Source record: 99989

Website: www.freeweb.com/fed_up

Thank you to those who have responded to the previous posting. We are working hard to catch up on correspondence. Apparently there are a lot more hams who are disgusted with the deterioration of the hobby than we thought. As for the emails we have received with threatening or obscene (and many, just plain stupid) comments, thank you; we plan to post the most ridiculous ones on our website when it is fully assembled.
For those of you who missed the first posting, the original CALL TO ACTION - CW ADVOCACY GROUP FORMING newsgroup posting follows. For you supercillious phonies who bellyache that this if "off topic", may we remind you that you sat by and said nothing during all of the anti-CW postings that have appeared here. Apparently those were "on topic." It matters not whether we are "granpaws" (sic) or "dinosaurs" or whatever other epithets you feel you wish to sling; one thing is sure, that you are a prime example of the death of free speech which should be a cornerstone of any communication service in a free society. Besides that, what makes you think that a "granpaw" has lost his right to expressing his opinion? Perhaps in YOUR world you would deny your own "granpaw" his right to an opinion. Perhaps in your world you need to remember that you are not getting any younger either and, sooner or later, you'll be there too. By the way, this writer is hardly a "granpaw," so your assertion doesn't stick.

CALL TO ACTION - CW ADVOCACY GROUP FORMING

This is not a warm and fuzzy "feel good" letter like much of the baloney you read in the ham radio press. If you are one of those individuals who don't mind a little sand kicked in your face as long as you have your grandchildren on your lap yakking away on your Kensu Pro Mark III, we urge you to read no further. Ugly truth follows. But, as they say, the "devil that you know is better than the one you don't."

The time has come (and it may indeed have passed) for trying to fix what ails ham radio. Ham radio has gone down "for the count." It has been sucker-punched with corrupt referees allowing much "dirty fighting" and knees to the groin. Regardless of the grand schemes of the ham radio aristocracy, the numbers are down. People aren't getting licenses anymore for many reasons but largely, because it has become a meaningless exercise. It is no longer an achievement of anything. So, they drift away. Years ago the ham population was a fraction of the size it is today and no one worried about how many hams there were. The only reason they keep dragging out this silly numbers issue is because of how many magazine subscriptions and

transceiver sales it represents. THAT IS IT. Follow the money trail and you will always be led to the culprit. It has nothing whatsoever to do with any noble concern over sharing the ham radio experience with as many people as possible. It's pure greed.

It is time we CW operators grow some hair on our chests. We have sat by and watched the FCC, Newington, manufacturers (you know which ones) and "No Code International" playing freely with this once great avocation. We CW operators have bootlicked and tried to remain passive and gentlemanly while they vandalized and stole from us. We have tried so hard to abide by Paul Segal's "Amateurs' Creed" that was pounded into us that we were fearful that our speaking up would break one of his sacred commandments.

It is insulting that lobbying by the "no code" idiots and those who stand to benefit from amateur radio entrepreneurship have succeeded in weakening the licensing requirements. They continue to chisel away at the license and enable people with little investment in learning and commitment to share the same spectrum with true ham operators.

We propose a federation of real amateur radio operators who are fed up with the diminished requirements cheapening the license achievement they were once proud to have. We propose a federation of people who are disgusted with the beating that the Morse code and the integrity of the licensing examination have taken. We propose to fight back. The mountain is steep and our adversaries have been able to get better footing. We probably cannot win.. It may simply be too late. But maybe we can soften how bad the impact will be when ham radio crashes to the ground. Also we can at least show those who are solely responsible for the end of the amateur radio service (which some have predicted could be within 10 years) that they personally destroyed a great communications service.

Earnest and dedicated ham operators must express outrage. Those puff-headed sycophants who we hear spewing the propaganda about "need for change" need to be challenged. Amateur radio is NOT about enabling kids to mumble nonsense on a 2-meter handi-talkie or how many secretaries in the front office in Newington got their faux- "Extra" class license. By reducing requirements and making a ham license easier to obtain DOES NOT MAKE FOR ANY SORT OF AN ACCOMPLISHMENT. Period. Amateur radio at one time was steeped in solid traditions and pride of accomplishing what it took to wear the title. Amateur radio was The Genuine Article. It was real. It had solid requirements and those who aspired to fulfill those requirements had reason to be proud of their achievement. NPRMs have repeatedly received overwhelming rejection but yet they are made into law. Why aren't they listening to the respondents? Why are the only ones they listen to the minority? The answer is this: because there is no respect for the playground weaklings.

FED UP CALLING FREQUENCIES - Bottom of "new" phone band
(e.g 3600 KHZ , 7100 KHZ
etc)

CW operators have just suffered a slap to the face by the diminished CW sub-bands in the so-called "Omnibus bill." We propose all CW operators register disapproval by continuing to use the old sub-bands. PLEASE NOTE: Before the angry emails start, understand that we are NOT advocating intentional interference to phone operations! We CAN co-exist. God knows we US CW operators have been putting up with Canadian phone QRM in our US CW bands for years. Shouldn't "What's good for the goose is good for the gander" prevail here? Why are the phone operators treated as such hothouse orchids? . For starters, on each amateur radio band, we propose the frequency that separates the CW and the phone sub-bands become a CW calling frequency for FEDUP hams to share thoughts and camaraderie with like individuals (For instance, 3600 KHz). Since CW operations are permitted from 3500 to 4000 khz, our operation on the bottom end of the "new" phone band is not violating anything. Phone operators, however, will be restricted from using this frequency since splatter would fall outside of their sub-band.

We propose establishment of an organization to be known as FEDERATION FOR UNCOMPROMISED PROFICIENCY (FED UP). To this end we are soliciting people willing to help write letters (FCC commissioners, congressmen, USA Today, agencies, manufacturers, magazine advertisers that use anti-CW publications...anyone influential to whom we can express our dissatisfaction as to what has been going on in this communications service). We are also soliciting hams with expertise in legal matters, media, business and marketing who would like to help us. Our goal is establishment of a professional lobbying effort to reverse the damage that has been done to the amateur radio service, the license, the quality of operators and the future of the service. The primary focus is re-establishment of proficiency to the amateur radio license and awarding levels of proficiency with privileges. Yes, this has been tried as recently as the last couple of years. Like we said earlier we are going uphill and it is not "politically correct" in today's amateur radio environment. But WE NEED TO BECOME MORE VOCAL. We need to stop being fainting goats. We need to get some FIRE IN OUR BELLIES and fight!

If you are interested in helping us put together an organization to challenge the horrific FCC rules and regulations and the idiotic policies that have been imposed on ham radio operators, we invite you to contact us. When we see what the interest level is we can better assess a potential group's structure. Obviously our first order of business will be establishment of a core mission and an executive staff to drive this effort. Please email us at fedup@intergate.com. Please be patient for our reply. We will respond to all serious inquiries personally. No doubt we will get a lot of moronic and angry emails, which will simply be deleted. Even so, it no doubt will take time to wade through the legitimate ones. And confidentiality will be maintained because we know none of you wish to put up with an e-mail inbox full of messages from goofballs.

We have been ignored because we've consistently lied down and complied. The bullies always pick on the kid who is most passive. We've been in such a rush to show how agreeable we are with all the "crap propaganda" coming out of the ham magazines, that we didn't even notice how the good things were slipping away. Our attention was diverted from their erosion of

technical proficiency and abilities as a well-rounded communications operator (including knowing the Morse code) while they distracted us with the razzle-dazzle of vanity callsign giveaways and a host of scary-but-bogus threats to the welfare of ham radio.

If you've got any fight left in you we'd like to hear from you.

73, ZUT and QTX

Hello,

I have bought a week ago a SONY ICF 7600GR in a famous shop here in Paris.

I live in an appartment at the 4th floor; the closest wall is at 30 meters.

I would like to know how to improve the reception thanks to the antenna.

For now, the best results i could get were by using an electrical cable linked to a drainpipe; not very professional, i know, but thanks to this archaic system i can daily receive many radio stations from europa, and even china.

What do you think i should do to improve reception ? And is thi temporary system OK ?

Should i buy an antenna ? And if yes, which one could suit my needs ?

Thanks in advance.

PS : I feel quite sad tonight because everywhere i look on the internet, it seems that SW are dying. Radio stations close, people do not buy anymore radios, etc.
What do you think ?

3901. Is This a Good Time to Buy that Radio?

This week, US treasury officials are off to China to try to arrange an orderly decline in the value of the dollar. Up to now, the Chinese currency has been locked in with the dollar, but they are now going to dump dollars in favour of a mix of currencies plus gold. Although the dollar has dropped 40% against the Euro, you wouldn't notice it at Wal-Mart, the Chinese outlet. It's only if you wanted something from France or Germany that you would feel pain, and even Canadian holidays are not the bargain they once were.
There seems little doubt that the US government is going to try a controlled inflation of the currency to patch over its money troubles and hope that the slide doesn't turn into a rout as it has in other countries (Argentina, Brazil, Zimbabwe, Russia, France, Mexico). Prices of radios are going to go up. The question is: how fast?
Armed with this foreknowledge, I bought a few ICF-S10MK2 radios from Amazon (free ship) while I could still afford to. OK, call me a cheapskate, but many a mickle maks a muckle, and lang may your lum reek.

I played with one of a long time ago.
It was in a very very sweet radio.
Out of my price range then and now.

Yes, I just read about it on the Internet - if nighttime AM was so
unsuccessful, then why are stations running broadcasting at night. You
are so full of shit, and IBOC will fail - go play with your red laced
panties.

I had a variety of receivers from an R390 to solid state ones that I used in both "on the beach" DX jaunts and in a beach condo for a decade or so in Puerto Rico. Neither they nor the home electronics seemed to suffer when they were given occasional cleanings (the condo seldom had air conditioning on due to high electric rates and the delightful temperatures year round). I don't think a single cruise would hurt a 2010, and placing it in a video camera bag or small computer bag inside a suitcase would probably protect it enough.

There is certainly a lot of pleasure to be derived from listening to exotic stations as locals!

I'm not so sure those are really comparable to a cruise that likely
prices out on the high side of $5k.

I am moving to Rochester NY and am planning on living right in the city there. I am wondering what the SWL will be like with the houses packed right on top of each other. My present situation is good with underground utilities. Will my next door neighbor's computer trash end up on the power lines right outside my window and destroy any chance I have to swl? Is there anything I can do to mitigate the noise beyond sticking antenna in back yard far away from power lines?

I would like to hear how others fare while living in a city environment.

thanks.

NEO

Well if they aren't interested in shortwave, they sure as hell won't be
interested in DRM.

I am NOT saying that there is no listening at night... just that it is
vastly below the levels of daytime radio in the 6 AM to 7 PM time period.
Night listening for AM and FM (all radio) is about 25% of the daytime level.
For AM, it is about 20% of the daytime level.

Still, there is listening, and it is worth staying on the air. More to the
point, there is nearly no listening between midnight and 5 AM, but (aside
from the original technical reason for operating 24/7), being on does
deliver a few listeners to the all important morning daypart where a huge
percentage of revenues are derived.

Most stations, unless they have play by play or something of its ilk, do not get revenue from late evenings and overnights... but they use it to give bonus spots to advertisers to lower the cost per point and to get on ad buys.

Not a surprising announcement, and probably overdue considering the
plummeting demand for shortwave radios.

Come to think of it, Sangean has probably just lost market share to its
competition. That's probably where that "50% reduction" comes from.

Ok, thanks for the post Bart. I'm going to be very limited when I get there. Looks like I'll be renting a small studio or room for the first 3mos. Some kinda not-so-obvious wire plugged into a portable for the first go around. I'll bring my homebrew BCB loop too.

I don't know exactly how to access the binaries of your antennas you posted. 15 years ago I would have used uuencode on my unix machine. Please give me a hint how to retreive.

regards,
NEO

Ok, got em Bart. I tried to go there with web browser but outlook
opened up and they were right there.

So if you do ok with that setup then I might have a fighting chance.
It almost looks like wires go directly over the roof. Is that right?
Also looks like there is a phone pole sprouting directly out of your
roof. Just the photo angle I 'm sure.

Thanks again.

regards,
NEO

Well, I always thought that stations like WWV and CHU were
"broadcasts". I mean, they're receivable on any standard radio with a
shortwave band.

So the format is "all time all the time". Not really all that
different from all-news stations like Cuba's Radio Reloj, which mix
newscasts in between the time-checks all to the sound of a ticking
metronome.

All the best for CHU. I would really be dissapointed if they go - I
always could depend more on CHU's signal than our own WWV. Just better
reception.

For decades, XEQK in Mexico City gave the time each minute, followed by 11
5" commercials. You could buy one spot every minute, every two minutes or
every 4.

I am not familiar with these radios. I do know that a lot of boom boxes
get tossed out into the trash. It may well be the case that a suitable
telescoping antenna can be scavenged from a discarded boom box you find
in a trash pile. The price is right.

I wouldn't worry about radio propagation on your cruise. What you should be
worried about is E. coli propagation. Before you go to sleep be sure to
look under your bed for monster size bacteria.

To all the twisted pervs and assorted low-lifers that infest this website and are drooling at the thought of a reeking lum, wipe up your spittle. "lang may your lum reek" is a Scottish greeting meaning " long may your chimney smoke", a hope that one would not run out of fuel for the fire, a thought that is still valid today. "mickle" means "a little" and "a muckle " means "a lot". If you watched Craig Ferguson on CBS every night at 12:35 instead of the porno channels you would know this.

I actually did some radio playing on an Alaska cruise recently. I carried a ft817, vx2r, and a 7600gr aboard with no problem. If you plan to do any transmitting on board a Princess ship, they want you to have permission of some sort. This permission involves faxing paperwork to them and you should plan on at least 30 days for the process to complete.

I chose to do none of this. I just took my stuff on board and operated from secluded areas on the upper decks. No one bothered me. Operating 2m repeaters with the vx2r was even easier. FRS radios are ubiquitous on board so no one even noticed what I was doing.

There are some caveats to hf tx/rx on ships. If you are cheap like me, you will be in an inside cabin. There is absolutely no radio possible in an inside cabin. Thus you must be out on deck with the rest of the passengers. You will be very limited in what you can do with antennas. Built in whips that are not excessively long will be fine. Wires or free standing antennas are probably not going to happen. If you have a balcony, you may have a little more flexibility with antennas, but since cabin staff are constantly fluffing your room, you will want to break down your antennas when not in use.

Also remember that ships are very noisy. There is electronics everywhere, and RFI is an issue. If you have to roam the decks with your radio, be aware of ship's antennas. They are everywhere. It would probably be a bad idea to tx/rx in close proximity to any ship board antennas, particularly if you are trying to be low profile.

I found I enjoyed the MW reception on board as I got to hear some stuff that I don't get to hear at home. It was also fun to hear locally what I usually hear as dx. Lastly, if you have one, take a small scanner. It is fun to hear the ship communicate with some of the local boaters.

And remember you are on your cruise first and foremost to drink. I'll have what the gentleman on floor is having and bring one every 10 minutes until after I fall off my chair. After that, bring one every 20 minutes.

SS,

Is the 'portable' AM/FM Shortwave Radio Market "Broken" ?

Let see a Sangean ATS-909 AM/FM Shortwave Radio costs about
$240 and the newer Sangean PT-80 Radio costs around $160.

Where as the good old reliable {better} Sony ICF-SW7600GR
AM/FM Shortwave Radio with AM-SYNC cost about $175.

Plus a bunch of newer Chinese (China PRC) made 'portable'
AM/FM Shortwave Radios priced and selling for under $100 . . .

Hey - The 'portable' AM/FM Shortwave Radio Market seams
to be working : Maybe it is Sangean that is Broken ! ~ RHF

>
> > Brian

- As you probably know, every part of the lead-in that isn't coax,
- is still antenna.

- - - PLEASE NOTE THAT THIS EBAY AUCTION IS OVER - - -
But as always - the 'fun' continues . . .

BpnJ - Yeah But ! - "The Yellow Jacket is a 100' THHN #12 Copper
With a Sunlight UV Resistant Inner Jacket and PCV Outter Jacket."
({ [It's really, Really. REALLY ! Insulated] })

PLUS - Static Protection is Incorporated Right At The Feed Point,
{Note} The Receiiver MUST BE EARTH GROUNDED
For The Protection Circuit To Work Properly.

WHAT ? - HOW THE STATIC PROTECTION CIRCUIT WORKS:
A 10,000 volt DC Blocking Cap is In-Line Which STOPS DC Static From
Reaching The Receiver. A Bleed-Off Resistor Takes The Static Build-Up
Safely To Ground, BUT in The Event The Build-Up is Faster Then The
Resistor Can Bleed It Off, A 90 Volt Fast Acting Flash Tube Kicks-In
And Pulls The Antenna Instantly To Ground. The DC Blocking Cap Can
Withstand 10,000 Volts, But The Flash Tube Will Never Allow The Charge
On The Antenna To Exceede 90 Volts, So There Is Plenty Of Head Room!

OBTW - Not mentioned in the in the description is the fact that
the Antenna's lead-in-wire is "Black" {Can we say "Stealth"}
- - - This could be the same type of Black-Wire used in
those famous Black Helocopters by the mysterious MIB.

THE FINAL WORD{S} - "This Is Not A Toy!"

and that ought to count for something :o) - iane ~ RHF

This may seem off topic for this newsgroup, but I figured I might find people here who had disassembled devices that have keypads.

I've got a Panasonic cordless phone whose keypad has stopped working unless I press extremely hard on the buttons. I took the thing apart and found that the actual keypad is just sort of a plastic "mat" containing the buttons I push. It rests on top of a circuit board that has corresponding spots on it for each button (membrane switches?). The Panasonic web site lists a replacement keypad, which is nothing but the plastic "mat". Although it's cheap enough to try replacing that part, I'm wondering if these things really go bad - maybe get fatigued or compressed over a couple of years. Is this fix likely to work?

The market for shortwave radios certainly seems to be working in the
sense of companies supplying and individuals buying radios. But it is
working at a much diminished level of activity.

I had a GM in Chicago who used to cruise the AOL boards, and later the broadcasting newsgroups. He was a GM for CBS Radio. And he posted to several newsgroups multiple times a day, often answering listeners' questions, or responding to their comments and criticisms.

For those involved in Radio, there is a pulse to be taken in newsgroups and on AOL boards. Not a terribly useful pulse over all, but a pulse that may have kernels of usefulness. If nothing else, especially the AOL boards and station specific groups, these venues offer an opportunity for high touch between staff and listener.

You'd be surprised at the number of professionals who cruise these groups. Considerable naive listening takes place on USENet.

Does anyone know how the definitions of a broadcast and fixed signal
differ? It sounds like ITU is expanding the number and kind of
stations that can use that frequency. Implicit within that decision is
that the time signals from WWV on 5 and 10 mhz could fill the void
which may not be the case.

I wonder what the process of re-doing the CHU license for the 7335
frequency involves and whether they may find themselves competing with
other signals. Best solution might be to shift to a nearby frequency.

If it works, why not ? China is transmitting with quite a power, so you could get it off the whip for sure, if the walls of your building are not made of steel & concrete... Are you living in a recent building or an old one from the 19th century ?

How high is your building ? Do you have access to the roof ? An external wire (if allowed) hanging down from the roof can be a very good solution, but you will also get the electrical noise from the TV sets nearby and the like.

> What do you think i should do to improve reception ? And is thi

>
> Should i buy an antenna ? And if yes, which one could suit my needs ?

In a city like Paris I would suggest a loop antenna (good sensitivy and low electrical noise). Check the group archives for names/brands or "do-it-yourself" models.

I personnaly use a small SONY AN-LP1 active loop antenna with good result : better signals that my 10 meters external wire antenna with a Sangean 909 (one of the main competitor of the Sony 7600GR) and a Sony ICF-SW100 radio.

>

We still have some to listen to. I like for instance to listen at IRIB (Radio Teheran), Radio Cairo, KOL Israel etc. to get the local point of view regarding the middle-east situation. I even get sometimes Radio Australia... but sometimes only...

I have the year 2000 ARRL handbook, and chapter 28 gives some pretty
good basic stuff on EMI, whether you're generating it or receiving it.
The ARRL RFI Book is also available from Amazon at $18 bucks.

I do okay with just the noise blanker in my rig -- there are all kinds
of external devices you can get nowadays from Timewave, GAP and MFJ.

You'll want to pay particular attention to your antenna installation.

Noise WILL be higher than in the weeds, owing to a greater number and higher density of sources. You'll get crap from older TV sets, noisy monitors, dimmers and security lights (which can be the WORST), air conditioners, garage door openers, and some street lights, and corona discharges on powerline insulators. In older homes, your own wall warts, and powersupplies may contribute, because of the way older wiring is laid out.

And don't overlook trash from broadcasters. In higher, local signal areas, overload, harmonics, splatter, and digital has can all contribute to headaches on the SW bands.

Selection of a noise avoiding antenna, like an MTA, by RF Systems, or loop by Wellbrook, and the like, will help. Proper grounding will often help, but not always. And installation of the antenna at noise minima will help.

Take care with your installation, and you can enjoy SWL and what AMDX remains, nearly as much as you can in the suburbs.

Excellent advice, the 909 has many of these features.

It also has a lock button, indicated by the little "door key" symbol.
If this symbol shows up on your LCD readout, your reception will be
seriously compromised, as changes to tuning and volume and everything
else will be impossible. Make sure this "key" symbol is shut off!

My building is 6 floors high; i live at the 4th floor; i do not have
access so the roof; but i guess i could use again the drainpipe and a
PVC tube to drive my antena verticaly, and discretely ...

Another problem is, as soon as i use the external antena, i get a
terrible electrical noise on all frequencies. This does not come from
my devices at home ...

Peter, you and Bob and the other folks have given a good rundown of the
exact set of issues I have to deal with here in the Bay Area. I know I

have a somewhat noisy house, but the real garbage is the incredibly RFI-rich environment outside. With three local 50kW AM stations at arm's length, two of which blurt out harmonics up to 6 or 7, a passell of neighbors with trash outdoor lighting and several noisy powerlines nearby, it's a wonder anything can get through the mess.

I don't use a Wellbrokk of other loop (I probably ought to try one), just a DX-Ultra (coax lead-in) strung out as best I can on a small lot, and a 60-foot plus 20-foot lead-in Inverted L terminated at a matching transformer outside, with coax lead in. I phase these two together for noise purposes with a MFJ-1026. The contraption helps in some cases, not so much in others. The nosie blanker on the radio helps some too.

The single most annoying things, which none of my noise-reduction artillery can effectively handle, are the malfunctioning transformers and streetlights in the neighborhood. Once a month, I have to make a trip around on foot at night to see what is malfunctioning and where, and report it to PG&E and the County to get it fixed. It's a hassle, but it's well worth the trouble.

Around the late '60's and early 70's the MIT dorms phone system had a
time phone number which reached a shortwave receiver tuned to a CHU
frequency. The frequency was never changed so it only worked at
certain times.

When I see them in the trash, I grab them. They usually get thrown out
because they don't generate tones anymore. The mechanical part of the
keyboard seems to last forever.

AM will shut itself off in due time, as news/talk, the principal format,
migrates to FM as it has in many markets just this year.

The problems of AM are multiple:

1. Increasing interference form thing ranging from BPL to noisy LED
stoplight switches, reducing coverage.
2. Migration of main format to FM
3. Lack of use of AM by under-55's, where nearly 100% of radio ad sales are
directed.
4. Unawareness of AM by under-35's, who have no use for it and do not
listen.
5. Advertisers with "No AM" dictates
6. Lack of full coverage signals in most markets. Few markets have more than
one or two AMs that cover fully day and night.

HD is not going to help AM much, although it could create an opportunity for niche music formats over time. Even that is doubtful. HD probably will be approved for night use, as there is so little listening to AMs outside their groundwave interference free contours and nothing would be lost.

3969. WJ-8718 ?

Does anyone have a manual for the Watkins Johnson WJ-8718 and could scan the mixer circuit in the input converter and email it to me? Or better if anyone has a spare input converter that they'd sell, it's A3 791592. Or the mixer module or a mod that allows one tho use a Minicircuits mixer module.
tnx

I have long found that taking an adversarial position to something I disagree with forces me to verify my facts (sometimes finding out I am wrong, too) which is a chance to learn new things. Certainly, debate hones the mind and helps clarify one's own thinking.

You don't know much about Usenet, do you? (rhetorical question, don't
answer.)

When you look at a posting total, it adds every cross post as a separate
item. So a reply in one ng that is crossposted to 5 other groups counts as 6
posts. Since one generally does not know where the replied-to post
originated, it makes little sense to eliminate the crosses, as the message
may not be seen by the original poster.

So, although I only post to 5 or 6 groups with any regularity, the posting
total shows 98 groups for me... meaning that my true post total over a
multi-year period is considerably less than 100 a month.

In any case, the simplest reply is, "so what?"

Why don't these guys carry cell phones, or radios.

Even an FRS Radio would be detectable at altitude.

A ham license and a small radio would find them with a few fly overs

Or am I missing something ???

Having fixed several scanners and SW radios with bad keypads, the number one cause of a prematurely bad keypad is pounding the keys. A friend hit the buttons on the one radio of his so hard he broke all the traces on the PC board under it. I found a new keypad, but the PC board couldn't be found, so out came the Cyano glue and the trace pen, and it's still working years later.

He learned his lesson, and now his stuff lasts years and years, instead of months.

Native American Indians hunted down and ate all of the Horses.It's wasen't untill the Spaniards brought Horses to Continental America and showed the Indians how to ride Horses that Horses took hold again.LQQK it up.Roy Rogers (born Leonard Slye) was once caught red handed beating one of his Horses with a stick or a whip.I remember reading about that in a local now defunct Jackson newspaper (Jackson Daily News) back in the 1950's.

Do you own a cell phone? Even if you don't use it,how long will the fully charged up battery last? Keep in mind,the colder the temperature of the battery,it will not (probally not) stay charged up as much/as long in cold weather vis a vis warm weather.(I know for certain that's the way it is with auto batteries)

About seven years ago,I owned a cell phone.Wheter I used it or not,every couple of days,the battery ran down and I had to hook up the battery charger again.I guess cell phone battery technology has changed a lot in the last few years.I think their cell phone batteries are as dead as a door nail,they just might be in a cell phone dead zone too.Sometimes,when I phone that divorced Bell South woman in Natchez,Mississippi (I live in Jackson,she lives out in the sticks near Natchez) she might be in an area where her cell phone isn't picking up so good.She will tell me to hang on a minute while she moves into a better spot.

Hello TMT,

IMHO you would have a hard time finding a better portable than the 2010. The new Eton E1 is getting a lot of good reviews, with a synch detector that's rated highly, and more features than the 2010. I don't have one however, mostly because of the price (plus it's ugly!) For $500 I'd rather go for a tabletop.

Also, Red Sun has an interesting portable out, and will be coming out with one in the future with synch detection (can't remember the model numbers, but do a search of this group for "red sun".)

As far as the Error 3, that is caused by a problem with the AA batteries that power the memory and CPU. If the batteries themselves are okay, then you may have to *gently* bend the clips that hold the batteries. From what I've read, this is a somewhat common problem with the 2010. If you search the Yahoo 2010 group, you will find more detailed descriptions and fixes for this.

Good luck, and let us know if you get another portable.

Should solve the problem

Charger for Motorola cell phone batteries is designed for use with Energizer Lithium Batteries. Plug in the Instant Cell Phone charger for automatic power, even when phone battery is completely discharged. Provides up to 10 hours of talk time, up to 12 days of standby time on two AA Energizer e Lithium batteries.

If cell phone is out of range -- use a radio

You may be missing something...I believe they -are- carrying cell phones and that is how they originally reported that they were in trouble. How long the batteries will last in the extreme cold is another question.

3999. Why bother getting a licence to use a GMRS radio?

Tecsun/Eton/Grundig are now Chinese-made junk - the Eton E1 has had a host of quality-control problems, including the batteries blowing up, when used with the AC adaptor. The Sony ICF-2010 is/was the best portable ever made - Sony is by far the best manufacturer. I have a hand-held Sony ICF-S10MK2 AM/FM $10 radio, that out-performs my digital PLL radios.

Forgot to mention, that the Eton E1 does not even have an internal ferrite-bar antenna, so you have to use an external antenna for AM, and although Satellite Radio ready, doesn't come with an antenna - at that price, absolutely ridiculous ! Fuck Eton !

I am designing an automated mailbox system that, after sensing an object in the mailbox, will send an RF signal from the mailbox to a receiver inside the home. To do so I am using a 555 timer to generate the tone, and on the receiving end, I am using a LM567 tone detector to detect this tone (probably with an output filter capacitor to "clean up" the signal). I want to make sure the correct signal is being received, and I was hoping someone could give me some insight (info, or even just point me in the right direction with like a book or website). I also would love to find out more about testing procedures to ensure the right signal is being received. Thanks for your time, and any advice is welcomed and appreciated.

Marxist leftist Barack Obama likely to be Neo-Kommie-Kreepy Clinton's running mate.

http://www.discoverthenetwork.org/Articles/DeLay%20Hillary%20Will%20Be.html

Report on Marxist Obama

Obama's father, a Muslim who abandoned his faith for atheism, divorced Barack's mother when Barack was two. In his 2004 keynote address to the Democratic National Convention, Barack said that his mother's parents were a non-practicing Baptist and a non-practicing Methodist. She "grew up with a healthy skepticism of organized religion herself," he said. "As a consequence so did I."

After his mother remarried, Obama lived in Indonesia with his stepfather, who was conscripted into the Indonesian Army [Indonesia has the largest population of Islam-0-facists in the world]. He first attended a Catholic school there, then a Muslim school.

In 1999, he was the only state senator to oppose a bill that prohibited early prison release for criminal sexual offenders.

In 2001, he voted "present" on a measure to keep pornographic books and video stores 1,000 feet away from schools and churches, and in 1999, he voted against a requirement to make schools filter internet pornography from school computers.

I only paid $399 for my E1 and it works great. It performs better than any
portable I've ever owned and better than a lot of tabletops I've used. No
problems in quality either. I sold my R-5000 and kept this because it
performs similarly and has a great interface. I think it was worth it.

You're referring to Kim, this is not the same story.

As to Kim being a hero? I tend to agree that he was not a hero, though his efforts would certainly be deemed heroic. I think that most anyone in his position would leave his family in the best possible situation and try to find help. That he did not make it, while his family did, is sad.

Your assessment of him being a 'dumb fuck' is purely 20/20 hindsight and second guessing on your part. If he had been successful you would no doubt be praising his efforts.

The original call for help was made by one of the hikers with a cell phone. Mt. Hood is a pretty rugged place, and there is not much in the way of useful communications. Cell phone batteries don't last forever, either. There have been a lot of foiled rescue attempts on the mountain. It's 11,000+ feet, and the winds are very nasty at the best of times. They've lost several copters up there in clear and cold weather, and there's been a storm up there for a few days now. I hope the folks are found, but the odds are poor at best. Why anyone would opt to climb Hood in the winter is beyond me, but there seem to be no shortage of such folks.

Yes, this works but it is not a permanent solution, the material in the kit
does not bond well to the plastic and will eventually flake off bringing back
the original problem. BTW you paint this stuff on the plastic mat. The bumps
in the switch pad have a conductive coating on them which shorts the pads on
the cct board. You can also test the digit pads by using a screw driver balde
to gently short each pad. This would be after removing the cct board from the
housing. ;)

On Boxing Day (December 26) in Australia we have a yacht race that starts in Sydney Harbour, and about 70 yachts race down the East coast of Australia and finish up in Hobart some days later.

I would like to follow the progress of the yacht by listening in on the radio skid.
Can somebody of the frequency and time this skid starts.

My understanding is all yachts are required to report in once every 12 hours.

Regards

Biggles

That one is over. Stations reaching about 80% of the population, with about
half the measured audience... 1,100 of them... are already on HD.

4043. *original* Grundig 960?

Just got my reproduction of the 1950's Grundig 960; nice radio, looks good, sounds good, receives well! Now I'd like to get an original 960; I think it'd make a sweet addition to the collection! Anybody got any clues on how I might track one down?

Yea, all you guys are right. I'll probably reference this thread when
I get settled in Rochester. I've got 10 acres on a hilltop available
to me an hour south of Rochester so I'll take a ride up to the top of
the hill and see what that sounds like. I think closest house to the
property is about a half mile, so should be nice and quiet. I can't
commute that kind of distance so I'll just have to live with whatever
noise is there - beyond Bruce's approach of evening recon and calling
in grid peeps to fix their probs.

My daughter Robin brought home an 'ugly' dog about two months ago. My daughter is a vet technician and often times will bring home a foster dog from work. We foster a lot of dogs that come up here from Tennesee and some from New Orleans too. Anyway, everybody was just kinda standing around sayin how ugly this poor pooch was and I was kinda tellin myself that I thought he was kinda cute. One brown eye and one blue eye and kinda looks like a hairless dog too. A real scrawny thing sitting next to my yella Lab. Actually it kinda reminds me of that little RCA doggy we used to see on TV. Anyway, I hit it off with the dog right away. So then the weeks go by and they can't find a home for it and my daughter says, "Daddy, I want to keep this one." Heheh. So I say to her,"Gee honey, I dunno, we already got Whitley and he's such a nice dog." But of course I've already made up my mind that we're gonna keep the 'ugly' thing, but I gotta play a little hardball cause that's my way. So I tell her that she isn't going to be able to foster anymore dogs - A test of sorts to see how much she really likes the dog. So she says Ok, she will keep dog and not foster anymore. So tonight I was just standing there in the kitchen and Acer bit my mangled thumb. That was the thumb I stuck into the table saw on October first by accident. I actually fell into the saw and nearly ground the thumb all the way down to the bottom knuckle. Anyway my daughter told me my thumb looked like a sausage and that's why Acer took a bite of it. He didn't know it was a finger. I laughed like hell as the blood came pourin out. Heheh. So before I came down here I went over to my daughter's room and let Acer take a lick of my thumb so maybe next time he knows it isn't a sausage. Maybe tomorrow I'll have to tell my daughter since Acer is behaving so good and not crapping or peeing one the carpets we can foster another dog.

I listen to out of the area AM stations all the time and I'm not Dx'ing
as a hobby but listening to the programs so a lot will be lost for me
and many other people that do the same.

Due to skywave propagation, AM IBOC still interferes with protected
contours; there is no way, the FCC can approve IBOC for n ighttime AM.
HD RAdio/IBOC does not work well on AM, so keep dreaming - we will be
around for many years. DAB has failed in Canada and IBOC will fail in
the US.

Only 1/13th of stations have bought into the IBOC farse; CPB stations
have stopped applying for IBOC. HD RAdio could reach 100% of the
population, but no one is interested in listening - HD RAdio/IBOC will
fail.

Hmmm, this starts to make the E1 tempting. Where did you find this price? Was it refurbished? I told myself that I wouldn't get another portable, but this, or the Red Sun RP300, could tempt me (the E1 is still ugly...)

DWP

Two reasons why. First they wouldn't want the extra weight. Second they don't consider emergency locator devices of any kind to be sporting. Kind of like a high wire trapeze artist not wanting a net. The Mt. Hood ranger station has emergency locator beacons for climbers to carry, and the rangers urge climbers to carry them, but my understanding is that these guys refused it.

I bought mine from Northland here in MN. I think that'sd the name of the Co.? It was new and checked out by Drake. Still had the protective coating on the dial and original box etc... I don't know if that price is still in effect but I'd still pay $500 for it. It's a great radio and a good a DX rig. I think those that knock it are ill informed. I've been DXing since 76 and have owned hundreds of radios and think it's a damn good radio deserving of more credit than it's given by most that have never even tried the rig. Five bills is not chump change but I always try rigs that are in my grasp economicly because I'm currious and this one I felt was a winner. YMMV?

hjsjms@cs.com

The ITU has allocated the band 7300-7450 kHz for broadcasting in all three regions of the world. The band 7450-8100 kHz is allocated for the fixed/mobile services, so Canada could in principle move CHU to some frequency in that band. North of 8100 kHz are huge blocks of maritime and aviation channels. However, in typical ugly American fashion, that band is allocated by the FCC in the US for broadcasting (47 CFR Part 2.106). Even now, CHU has to contend with loudenboomer splatter from cochannel and neighboring channel broadcasters. Moving north of 7450 kHz might have the same problem, and that from south of the border.

One alternative might be to move CHU south of the 40-meter amateur band. There is a 6765-7000 kHz band allocated for the fixed/mobile services. However, the FCC considers that an ISM band, so various kinds of evil emitters are sure to be found. Tonight I found a S9+20 dB religious program on 6855 kHz broadcasting from Florida, no doubt registered as an ISM emitter. Don't get me going on Part 15 and Broadband over Power Line.

The dillema CHU faces is quite serious. The ITU has allocated 10 kHz channels at 2.5, 5, 10, 15, 20 and 25 MHz for standard frequency broadcasting. However, shortwave broadcasters are camping on +-5 kHz carrier spacing on 5 MHz at least, so their sidebands sometimes clobber the WWV transmission, contrary to ITU and FCC rules. There is no other frequency that is protected from the broadcasters or vested interests.

The unvarnished fact is that CHU has been a valuable service in the eastern US and Canada where WWV signals are often weak and unreadable. And, sad to say, WWVB service at 60 kHz has become seriously degraded due to noise pollution via the power lines and uninterruptable power sources (UPS). My experience with the NTP audio demodulators for WWV and CHU suggest that they may in fact become the preferred alternative after GPS, which has its own antenna issues.

Dave

It's really rough country in that area of the world. I was there in the Fall of 1971 for a forest fire south of Hood River, Oregon. I can't think of how anybody would ever go into that area at this time of the year without some good reliable radio equipment with plenty of spare batteries. A cell phone would not be on the top of my list for radio equipment when in the wilderness.

Cell phones these days are really low power. A dual band ham radio
would be better. More TX power and a high gain antenna.

Now it's news to me that these guys are so macho they would refuse
beacons. Really dumb.

note when it was posted. note my age (which given that I was born in 65,
puts the age on that post slightly more than a decade off the mark) and
note my particular writing style.

you really have to ask who is doing what here......

btw, that particular little posting happens to be a forgery OF A FORGERY
(there is irony in that). I am also certain that the original posting was
made by someone wishing to make it appear that I was seeking the online
equivalent of "trolling for prostitutes" (which, IRL, is illegal anyway).

so, the question begs... who have I gotten under the skin of so deeply that
they feel the need to try and drag my very identity down into the sewer
with them? who have I managed to piss off so much that they consider it
their mission in life to destroy my online presence, stalk me in real life
and otherwise cause damage by personal involvement?

I don't have an answer and I don't really care. I do care that someone seems
to think it important enough to use it as actual fact, when it is (and has
been) already known to be a lie.

interesting that.

> Regards, Cato
Do you actually have one of these?

The whole problem is that people in the know have started to refer to Gegen as an innovative company which produces BETTER radios than Sony, especially after a bit of development. A company which goes against the grain of development of Chinese companies which tend to produce amazing technological achievements in prototype form to show to their corporate customers which then become tinny bits of junk with all corners cut to save money when put into production (see made-in-China versions of Sony VCRs which Sony tells

you to they will swap out or you can throw away if they ever go wrong)

I however have this radio and have noticed an alarming tendency towards 'the Phillips effect', - putting features, knobs, mechanisms on it which don't actually do anything.

It says it is dual conversion on Kaito's radios page but then on its own page doesn't make any such claim. Which being the case it should have some pretty advanced circuitry to compensate for this but it doesn't make any such claim. It only sports those 'Phillips' features.

Mine doesn't actually pick up any stations and when I bought it for this amazing auto-memorising of 1000 short wave stations [obviously UP TO 1000] and asked why this feature didn't actually seem to work (it DOES tune in some stations of pure interference), was told that this feature is only really designed to tune in 1000 FM stations (cf. 'The Phillips Effect') where on FM the stations are stronger; and that on SW, the stations have to be tuned in manually. Indicating that it doesn't actually have any advanced circuitry at all to support this feature!

Even worse, all the commentators seem to regard it as a toy and haven't ever done any reviews, - or even comparative reviews, - on it?

Meanwhile it IS an adorable little thing in much the same way as the Austrian-built AE3905 was and while I found that to be the worst SW radio ever designed (it's batteries weren't even powerful enough to power its own speaker!), I am left wondering whether I am doing something wrong with this DE11 or whether in reality I just have an early version and Degen has still to design those features into it. Or get them working properly?

BTW RHF, What WERE all those references to google searches dating back to the year gimel on radios supposedly surpassed by time in 2006?

Not to split hairs about this particular rule, but if the rule is immoral, it does. Civil disobedience against a bad law is, despite its illegality, nonetheless just.

I got to play with an E1 a couple of months ago. Even though it doesn't have an internal loopstick antenna, it worked quite well on MW. Somebody said that this radio is mad in China. When did this radio stop being made in India?

If IBOC replaces the analog signal entirely and the IBOC power levels are increased to anywhere near the stations full night time level, DXing IBOC on the AM band will be very interesting and far more efficient IDing the station for the DXer.

Watch this page: http://www.sec.noaa.gov/SWN/index.html

Pay attention to the Magnetic Field Bz component dial.
As it looks at this very moment, it shows a slightly reversed (S) magnetic field relative to earth's N/S magnetic poles.
If this trend continues geomagnetic activity will increase.

See http://www.sec.noaa.gov/SWN/sw_dials.html

Magnetic Field Bz dial:

Ranges from -50 to +50 nT. The dial is a linear scale from -10 to +10 nT and a different linear scale from -10 to -50 nT and +10 to +50 nT. For values beyond the maximum and minimum, the arrow will stay pegged at the maximum or minimum. If the magnetic field data are missing, the arrow will not appear. The arrow will move to the location on the scale corresponding to the actual value of the latest 15 minute average of the Bz component of the magnetic field vector. The letters N and S refer to North and South of the magnetic equator. The color bar indicates green for positive values, yellow for small negative values , and red for large negative values of Bz.

Why Bz is so important:
When the interplanetary magnetic field turns south compared to the Earth's magnetic field, geomagnetic activity will increase. As the Bz (Southward pointed) value becomes more negative, the associated geomagnetic activity increases.

With VERY few buying HD Radios, there is no way analog could be shut
off for MANY years; the Bridge Ratings have analog going out until the
middle of the century. The problem is, IBOC causes adjacent-channel
interference, even within protected contours, so IBOC DXing would be
difficult.

I have no idea, why a loop stick antenna was not supplied - all I can
say, is that with my miserable experience with the Tecsun/Etcon/Grundig
cheap crap S350, I will never go near Tecsun/Etcon/Grundig, or Sangean
again - I have had excellent experiences with Sonys.

IRAN: STORM WARNING FROM STUDENT PROTESTORS

Tehran, 13 Dec. (AKI) - "Whoever sows wind, will reap a tempest" ran the concluding line of a statement published in Tehran on Wednesday by the Tahkim Vahdat, the main student movement in Iran. Monday's incident, where hardline president Mahmoud Ahmadinejad was heckled by students at the controversial Holocaust denial conference, "shows that the universities are alive and do not intend to stay silent at the ruin of the country," Vahdat's leaders said.

Dozens of protesters burned pictures of Iranian president Mahmoud Ahmadinejad crying 'dictator go away', 'death to dictatorship' and threw firecrackers on Monday forcing him to interrupt several times a speech he was giving at the Amir Kabir university in Tehran and leave before scheduled. A thousand students had also protested on Sunday at the university asking the president not to come the following day.

The students were protesting against "the shameful conference on the Holocaust which has brought to our country Nazis and racists from around the world and the fact that many activists with students' movements have not been allowed to attend university," said Mehdi Hatefi, an activist with Tahkim Vahdat on Monday.

It was the first time since his landslide victory in June 2005 that Ahmadinejad was challenged in public.

"The shouts of the students when they found themselves face to face with the head of the government wanted to underline the extension of repression here and the incapacity of this government for the benefit of the country, as well as rampant corruption and a disastrous economic situation that have characterised Iran for the 155 months of his rule," the Tahkim Vahdat statement read.

"In the universities they try to prevent any voice of dissent from being heard, many open-minded professors have been pensioned off or forced to resign, the politically active students expelled, and most of the student magazines forced to close," it added.

"Iranian students are flying the flag of resistance to this corrupt and repressive government, and do not intend to yield any ground to these forces are hoping that other sectors of society will join us in their battle because who sows wind, will reap a tempest" it concluded.

IRAN: FOUR STUDENTS AT ANTI-AHMADINEJAD RALLY DISAPPEAR

Tehran, 11 Dec. (AKI) - Four students with the Imam Hossein university in Tehran who took part Monday morning in a protest against Iranian president Mahmoud Ahmadinejad have reportedly disappeared. Mehdi Tajik, Nasser Zohre, Nasser Kamali and Hassan Fadwi, all physics students, went missing while walking home from the protest. They are members of the Association of Republican Students and reports said Pasdaran officials could have detained them.

Dozens of protesters burned pictures of Ahmadinejad crying 'dictator go away', 'death to dictatorship' and threw firecrackers on Monday morning, forcing him to interrupt several times a speech he was giving at the Amir Kabir university in Tehran and leave before scheduled. A thousand students had also protested on Sunday at the university, asking the president not to come the following day.

Mehdi Hatefi, an activist with students' group Tahkim Vahdat, told Adnkronos International (AKI) the students were protesting against "the shameful (ongoing two-day) conference on the Holocaust which has brought to our country Nazis and racists from around the world and the fact that many activists with students' movements have not been allowed to attend university."

It was the first time since his landslide victory in June 2005 that Ahmadinejad was challenged in public, though a spokesman for the president said he had been undeterred by the protest and finished his address as scheduled.

IRAQ: 'NEW EXPLOSIVES USED'

Baghdad, 12 Dec. (AKI) - The suicide truckbomb attack that killed at least 70 people and injured over 230 early on Tuesday in the capital, Baghdad, was carried out with explosives that are not known to have been used in previous blasts, an unnamed expert from the Iraqi interior ministry told Adnkronos International (AKI). "According to our impressions, today's devices were packed with not less than 150 kilogrammes of a new kind of explosive made from a mixture of TNT and other chemical substances intended to cause as many deaths as possible," the expert said. Many of those killed were poor Shiite labourers looking for work.

"These chemical substances may come from chemical weapons arsenals dating from the Saddam era, developed in secret laboratories. Explosives experts from the ministry are collaborating with international experts to try and and find out more," the expert continued.

Well, I have to tell you, I have been tempted by it too, especially
since the R8B has been discontinued, and this one looks to have many of
the essential features that made the Drake so tempting. It is good to
hear more positive news about it. I'd rather have the tabletop - they
just *feel* better to me - but since performance is the ultimate goal,
perhaps a move sideways to a top-quality portable isn't such a bad
move.

U.S. to defend space with military force

...
"No nation, no non-state actor, should be under the illusion that the United States will tolerate a denial of our right to the use of space for peaceful purposes," he said. "We reserve the right to defend ourselves against hostile attacks and interference with our space assets," he said.

U.S. officials said the comments are an indirect warning to China, which has fired a ground-based laser gun at a U.S. satellite that passed over its territory -- an event viewed as one sign of Beijing's efforts to develop space arms that can blind or destroy systems.

Mr. Joseph said yesterday that a number of nations are developing weapons to "counter, attack and defeat U.S. space systems." He did not name the countries. Asked after the speech about the Chinese laser incident, he declined to comment.

"In view of these growing threats, our space policy requires us to increase our ability to protect our critical space capabilities and to continue to protect our interests from being harmed through the hostile use of space," he said.

Sure, an Eton E1 would be a better portable than a 2010.

The thing is that the 2010 is about the same amount of $s if you can find
one. Not too many go for less than $350-400.

Not surprising. High-end shortwave radios were a niche market to begin with. With the implosion of the hobby it stands to reason even fewer people will buy the NRD.

If it's not shut off it will be shut-out... by iPods, XM, Sirius, MP3's,
Radio over IP, the future - all digital technologies.

Hope you enjoy your analog TV while it lasts.

Brian, does this E1 unit have:

RF Gain?
Noise Blanker?
Switchable RF filters (2.5, 4, 7 kHz, as I understand it) for all
reception modes (AM, AM-Synch, SSB)?

I couldn't quite tell form Universal's website...

Thanks, BJ

Check out http://www.WhatTheWestNeedsToKnow.com it's in there!

Will there be an American genocide?

"WHO NOW remembers the Armenians?" Hitler asked, just before he embarked on the destruction of European Jewry. Precious few, it seems. As the memorial day for the Nazi genocide against the Jews was proclaimed by Mr Blair this week, there was not a single reference to the slaughter of one and a half million Armenian Christians by the Ottoman Turks in 1915. The world's first holocaust - and Hitler's inspiration for the slaughter of the Jews - was ignored.

Will the Turks continue to refute the Armenian Holocaust just as the Islam-0-Facist Iranians refute the Jewish Holocaust?

http://groong.usc.edu/fisk.html

The Armenian Genocide was carried out by the "Young Turk" government of the Ottoman Empire in 1915-1916 (with subsidiaries to 1923). One and a half million Armenians were killed, out of a total of two million Armenians in the Ottoman Empire.

Armenians all over the world commemorate this great tragedy on April 24, because it was on that day in 1915 when 600 Armenian leaders, writers, thinkers and professionals in Constantinople were rounded up, deported and killed. Also on that day in Constantinople, 5,000 of the poorest Armenians were butchered in the streets and in their homes.

The Armenian Genocide was masterminded by the Central Committee of the Young Turk Party (Committee for Union and Progress [Ittihad ve Terakke, in Turkish]) which was dominated by Mehmed Talat [Pasha], Ismail Enver [Pasha], and Ahmed Djemal [Pasha]. They were a racist group whose ideology was articulated by Zia Gokalp, Dr. Mehmed Nazim, and Dr. Behaeddin Shakir.

The Armenian Genocide was directed by a Special Organization (Teskilati Mahsusa) set up by the Committee, which created special "butcher battalions," made up of violent criminals released from prison.

Some righteous Ottoman officials such as Ali Souad Bey and Yousouf Zia Bey were dismissed for not complying with the extermination campaign. Any common

Turks who protected Armenians were killed. The Armenian Genocide occurred in a systematic fashion, which proves that it was directed by the Turkish government.

First the Armenians in the army were disarmed, placed into labor battalions, and then killed. Then the Armenian political and intellectual leaders were rounded up on April 24 and killed. Finally, the remaining Armenians were rounded up, told they would be relocated, and then marched off to concentration camps in the desert between Jerablus and Deir ez-Zor where they would starve and thirst to death in the burning sun.

On the march, often they would be denied food and water, and many were brutalized and even killed by their "guards" or by "marauders." The authorities in Trebizond, on the Black Sea coast, did vary this routine: they loaded Armenians on barges and sank them far out at sea.

The Turkish government today denies that there was an Armenian genocide

The American people did the most to save the wretched remnants of the death marches.

And they still are to this day.

Watch January 27th & April 24th

http://www.kurdistan.org/Current-Updates/rfisk.html

(November 27th 2000)

President Clinton pleaded with the US Congress to ignore calls to commemorate the Holocaust because, if they did so, "American lives" would be at risk.

...all the reasons why President Clinton - and our own government - now seek to deny the truth of history. Acknowledging the Armenian genocide would "needlessly jeopardise US-Turkish relations". Turkey is a strategic Western ally, "the only secular democracy in the Middle East", the second largest army in Nato. Turkey wants to join the EU. "Europe could take full advantage of Turkey's low cost of labour, just as the US has in Mexico." Europe "sorely needs the vast labour pool Turkey has to offer, as many European employers will attest".

It is difficult to stop the gorge rising at such revolting remarks. Because of Turkey's military power, its so-called "democracy", its bulwark against "Islamic radicals", its desire to join the EU and its cheap, exploited labour market, we must censor out of history one of the most terrible atrocities to have been committed. This is what lies behind President Clinton's cowardly remarks to the US Senate.

What exactly is a Neo Kommie. Is it any relation to a Neo Commie and a
Commie. What are they exactly anyway.

And disassembling your name:

Proud - That's good you are proud.

Neo-con - Does that mean you are a new con or NEWLY CONVICTED
CRIMINAL?

American Right-wing Zionist - I GIVE UP...WHAT IS THIS.

Christian Imperialist Capitalist - Same with this phrase...it makes no
sense.

4114. Racism IS IT A DISEASE? .. The search for a cure

Racism IS IT A DISEASE? .. The search for a cure

RACISM

IS IT A DISEASE?

A Catching evil smart bug carried by blowflys like bigteddy scotty and workingman former banned posters here who promote racism this long established disease.

Can our medical researchers discover a mirical Anti Racist cure Pill or Potion and prescribe it by Pharmacy and Prescription" ?

How is it that we are less racist now than we were a few years ago? Are we learning a new way? Are we being cured of a disease? I ask what racist problems did they encounter. At first, they said: None.

Not one? Well there are children who have very little or no English. What happens to THEM? They have to sit and listen, and gradually they get the language. Is there any attempt to teach the white kids THEIR language or their customs? Now and again they learn how to say "Hello" in Turkish, in Spanish. Now and again.

What an experience those four year old children must be going through in this foreign land! Well, you say, they have to ASSIMILATE as quickly as possible, or..... Or what ?

Listen to what happens when we are racists and why racists need to take a pill to cure this disease:

1. We talk as if we are one, but we emit microsignals of hostility, distance, suspicion, difference.

2. We cause hurt and humiliation to adults and children. We depersonalize, dehumanize, demoralize.

3. Racism robs its host of sensitivity and humanity, of well-being and good feelings towards the world.

4. By our attitudes we increasingly drive the "inferior" person or group into themselves, into their own group, and there they incubate resentment, and hostility; or they might eventually kill themselves.

5. The racist curries favor in the dominant group and reminds them of their superiority, their need to protect their property and power base.

6. The racist incites a contagious hate and abuse, which is likely to provoke retaliation, inciting more confirmed abuse.

7. The racist is shortsighted, and does not see that their constrictive fearful attitude is always a shriveled up shadow of the great expressions of generosity and compassion, of humanitarian intelligence and community well-being.

Often racism is an insidious disease. Like so many other diseases, we want to deny we are the hosts of such a disease. We deny that it is a disease. We assert that our attitudes are justified, rational, intelligently protective. But we evade the awareness that the best way is the way of humanitarian collaboration.

Many as we are, we are one in searching for a new way.

I am convinced it is a disease and we should be searchine for a Medicine Pill to cure it.

You can catch it by listening to talkback radio programs,associating with political parties such as Divided Nation or Howards mob, not weariing a condom or not washing your hands of all racists.

One hopes as we found cures such as antbiotics and the one for stomach bugs we can find the cure as others have as described here

http://ausboardschat.proboards81.com/index.cgi

Until then I will have to suffer this sick feeling in my stomach.

Written in response to Banned Racist Political Posts on Aussieseek Australian Political messageboards at

http://www.aussieseek.com

We are One

But we are Many

And from all the lands on Earth we come

4120. John Batchelor

Newsgroup: rec.radio.shortwave
Date: 2006-12-14 21:20:52 UTC
From: Proud Neo-con American Right-wing Zionist/Christian Imperialist Capitalist <right@your.face>
Message-ID: <elsf7n$qj9$1@aioe.org>
Source record: 100259

Submitted by John Batchelor, Dec 5, 2006 14:36

Letter from Nearly Chappaqua: The John Batchelor Show crew and this bookish host are grateful for the kind words from the polite and the thoughtful such as VSK and David B. Richard. I am camped this season at the spectacular Butler Library at Columbia University, where I was sitting the day of the 9/11 attack and will likely be sitting the rest of my days. Columbia University is a treasure, and this recently refurbished library, with its wireless links and rich periodical collection, is one of the most enlightening places in America. In between my library visiting and my microfilm reading, there is much certainty of going back on air next year in partnership with the Hoover Institution at Stanford University: details to be announced over the next weeks by my partners. Meanwhile, I am writing a work of fiction -- my first fiction writing in five years -- and reading happily and most swiftly: I have started Tom Pynchon's mordant marvel "Against the Day" and David Cannadine's breathtaking "Mellon." Because I commute to Westchester these days, via the Dickensian 125th Street Station, I am often in Chappaqua on my way home, and keep a weather eye on the village that it will take to make Mrs. Clinton a nominee and, luck holding, a president. The villagers are ready, the Clintons are beloved, Mr. Clinton is a tireless and heroic advocate for the least among us on the Earth, and Mrs. C is as well-prepared and dutiful as ever there was a candidate for the presidency. My audience is well informed that I am a lifelong and grandfather-father-sworn-to Republican. Nonetheless, this is a front row seat at a political storm coming like 1960, or 1932, or 1912. Bumpy ride, seat belts, fasten. I hope to be along for the adventure and hope to have my kind and smart audience alongside.

The problem is Sony didn't hardwire one of the AA battery terminals to the PC board. Instead they used a pointed contact on the terminal which touches a solder pad on the microprocessor board. Over time this contact can become unreliable, causing the AA battery circuit to open intermittently. The microprocessor senses this problem and produces the error message. The solution is to bypass the pointed contact on the AA battery terminal with a short wire soldered to the microprocessor board. This is what the other AA terminal uses. However it's not easy to access the location where the bypass wire needs to be installed. I recall having to completely remove the main PC board and partially remove the microprocessor board under the main board, to get to the AA battery terminal area. It was worth the effort though. The error message problem is gone now on my 2010.

Now, I remember you - I've had run-ins with you, over your
piece-of-shit Eaton Shit E1 ! Have your batteries blow up, or any
knobs/switches fallen off, yet ? So, how much did you end up really
spending on your Eaton Shit E1 (remember me ?), with the AM loop and
Satellite Radio antennas - $700 ? Cocksucker !

TMT,

If you could buy a Sony ICF-2010 Radio in an Un-Opened Box
aka : 'new' - "NIB" {New-In-the-Box} Today - Great ! Go For It !
- - - These so called "NIB" Sony ICF-2010 Radio usually sell for
over US$500 normally about US$750 on eBay.
- - - However, even though it is 'new' it most likely it does not
have the original Sony Manufacture's Warranty Card.
- - - The Reality is that you are most likely faced with buying a
'used' Sony ICF-2010 Radio for about $240 to $360; that has had
one or two previous owners -and- just may be not quite 100%
{Showing It's Age} - The proverbial PIAP.

So what is out-there that is as good as a Sony ICF-2010 -and-
can be bought "New" with a Full Manufacture's Warranty ? ? ?

IMHO - In today's the 'portable' AM/FM Shortwave Radio Market
-Only- One 'portable' AM/FM Shortwave Radio comes to mind :
The Eton "E1" 'portable' AM/FM Shortwave Receiver with
'opinion' XM Satellite Radio.

For Information about the Eton "E1" 'portable' AM/FM Shortwave
Receiver with 'opinion' XM Satellite Radio check-out the :
Eton "E1" 'portable' AM/FM Shortwave Radio Group on YAHOO !

All I know is what I see on TV and hear on the radio, but it has been said that the climbers were not beginners.

At last, a chance to dust this off. Google for "mcminnville frs hood."

http://www.google.com/search?q=mcminnville+frs+hood

"Youngsters hailed in radio rescue" June 2000
http://www.arrl.org/arrlletter/00/0630/#youngsters

"Youngsters hailed in radio rescue: Two young Oregon brothers are being credited with quick thinking after they intercepted a plea for help transmitted via a Family Radio Service UHF transceiver by some injured mountaineers more than 80 miles away. Fletcher and Parker Wold, ages 7 and 5 respectively, of McMinnville, heard the call for help put out by climbers Iain Morris, 23, and Jim Clark, 38. Morris and Clark had been caught in a rock slide on Mount Hood June 20, and Morris was seriously injured. The brothers immediately alerted their dad, Mike Wold, who contacted authorities, triggering a full-scale mountain rescue. Mike Wold says he gave the boys the hand-held transceivers to use when playing in the woods, so he could keep in touch with them. The hikers had tried their more-powerful VHF transceiver before giving up and using the FRS set they used to keep in touch with one another along the trail. In a related story, REACT International is suggesting adoption of FRS channel 1 (462.5625 MHz) with the CTCSS tone disabled as a national call channel. REACT says it came up with the idea after lost hikers in Southern California spent 40 minutes calling on 14 different FRS channels using 38 different tones. In that case, an 11-year-old boy, Kristofer Moore, heard the distress call on his FRS H-T while camping with his family.--thanks to Cindy Wall, KA7ITT; REACT"

The kids were in People magazine and everything. It was line of sight from the climbers on Mt. Hood to McMinnville.

Would you like batteries with that?

Message-ID: <1166149354.252828.174420@16g2000cwy.googlegroups.com>
Source record: 100281

Hello all

I may be buying a R75 shortly but have a question on its broadcast band capacity. I have heard that the R75 is not a very good receiver for listening to AM broadcasting because of its poor synch detector. I am wondering if it is as bad as the reviews say it is or is it something that can be overcome.
Also I am curious as to how the Eton E1 would compare to the R75 in performance as I have heard good things about it as well. I am hesitant in putting down $500 on a portable radio but would like to weigh all the options before deciding which receiver to get

Thanks

Just kidding Bart. I'm very guilty of collecting myself and do understand
but my main point is the 2010 and the E1 are both good radios. It's just
getting harder to find a 2010 at a reasonable price and it can be a mixed
bag unless you trust who your buying from.

""""""""""""""""""""'''''''''''''''''''''''''''''''''''''''''''''''''''''''''''''''''''''
'''''''''''''''''''''''''''''
There is some agreement that Chinese expansion is on a shaky
foundation, and cannot continue expanding at 10% a year, but the big
difference between the problems of the US and the problems of China is
that the Chinese hold about a trillion dollars in US debt instruments
and the US has no way to redeem these debts. The US is not producing
much that anyone wants, having gutted their manufacturing industry
(except planes, war material) and China's factories are producing
everything. So the US cannot work its way out of debt, and China can
solve its allocation of resources. Bankers and investors do not want to
hold on to a depreciating currency and computer-driven trading programs
could tell everyone to sell at once. This is not good.
For further thoughts on this go to;
<http://www.321gold.com>
and read the article "US$ A Real Dilemma" by Enrico Orlandini
and " I Scream, I Weep, I Sigh, I am Tired." by Richard Daughty ( the
Mogambo)

4147. Re: people in the know refer to Gegen as innovative, producing BETTER radios than Sony

Newsgroup: rec.radio.shortwave
Date: 2006-12-15 03:20:01 UTC
From: Cato <catoni52@sympatico.ca>
Message-ID: <1166152801.496362.210080@t46g2000cwa.googlegroups.com>
Source record: 100287

My radios are, Panasonic RF-2200, Sony ICF-7600D (ICF-2002), I've had those first two radios for years, and they are still excellent performers. I also own, Eton E5, Eton E100, Kaito KA1102, Kaito KA1101, Kaito KA105, Grundig Mini-300PE and they are all fun to use.
A month and a half ago I purchased a Degen DE11 from a seller on eBay along with a Degen DE31 active loop antenna. The Degen DE11 cost me about $67 bucks with delivery. Some people say that "You get what you pay for", and I agree. But sometime you can get quite a bit for your money, and that, for me, was the case here. This little radio is not double conversion. It is only single conversion. But in my opinion a very good single conversion for its size and price. Kaito U.S.A. sells it as the Kaito KA11 and they are identical except for the name. I ordered and received a second Degen DE11. For me they are perfect for hiking camping and canoeing trips into the wilderness. It is a better radio then the Kaito KA105/Degen DE105. Better then any other radio its size or smaller except for the expensive Sony SW100/SW107 radios, as far as I know. I know that Sony radios are excellent radios. My Sony ICF-7600D still works as good as it did the day I bought it, and I really enjoy it. My old Panasonic RF-2200 is a great radio that has excellent sensitivity, and I can listen to it far into the night. They still sell for $200 - $300 today, used, in good condition, thirty years or more after production ended. But I purchased them back in the time when I could afford something that expensive. They were a costly radio for the size at the time when they came out. But it was worth the money for me. They are good radios. But you don't have to spend that kind of money, or buy a top of the line brand name to have fun with shortwave. There are some good quality radios out there that are fairly inexpensive. Yes, there are also junk radios that a waste of money, and you have to be careful to avoid. Read the reviews in Passort to Worldband Radio, and you will get a good idea of what to look for, and what to avoid.
Went out and bought LowePro camera cases for the DE11's that fit them nice and snug, give them great protection and have room in a little pouch on the case for a spare set of batteries and the little extension plug-in antenna that comes with the radio. A great little radio for an emergency preparedness get-away kit. Included in our family's kit are 2500 mAh re-chargable batteres and a fold up solar cell charger. My larger radios would just take up too much room, and weigh more as well. They would have to stay behind, although I would be tempted to try ands grab the KA1102. Size and weight are important issues for some types of travel.
Anyone who says that this little radio, the DE11/KA11, is a peace of crap obviously doesn't know what they are talking about, or they

have a hatred of anything that comes out of Communist China. (I hate all forms of totalitariansim, but they are making some good radios at good prices. God, I wish we could do that here in the western nations. Yes, we can make some excellent radios, but at prices out of the range of a lot of people struggling to raise families and pay taxes.) I am not saying that it's the best radio, it's not, but it is a good radio, maybe very good for my intended usage. Maybe some people just feel that if you can't afford to spend $300 - $500 or more, then don't bother buying a shortwave receive. Well, that statement is crap as far as I am concerned. You can have a lot of fun, and listen to some interesting shortwave broadcasts without having to spend money that you can't afford to spend. I have owned shortwave receivers for forty years, and believe that I have a good feel for what is a good radio.
I can't inderstand why someone would not be able to receive anything with the DE11. Perhaps a bad unit got out of the factory. I would go back to the store and try another one. Or check the batterys and the Local/DX switch. My DE11 picks up all kinds of stations just off the whip. Adding a length of wire, either plugged into the jack, or clipped to the whip gives it a boost of course.
This is the last I have to say in this debate.

Have fun. Cato

If the only experience you have with Eton is the S350, you are clueless.
Why don't you post back here when you have something meaningful to offer.

I'm just like you with the same radio, except that I live in an apartment in Hong Kong. I made a simple outdoor antenna as follows.

I got a few metres of insulated wire (salvaged from discarded electrical appliance), mounted it outside the window to run horizontally on the outer wall of the building, by tying one end of the wire to the window frame of another room in the apartment, and the other end clipped to my radio.

Results are good. No problem with the major stations. I even picked up Radio New Zealand International whose signal is more intended for Oceania rather than Asia.

Remember to disconnect the wire in a thunder storm, though.

Which altitude are you talking about. Or do you mean to say that the signal from a FRS radio might under certain conditions be detectable by some rescures within a relatively small radius.

>

Hmmm...A ham license and a small radio doing a few flyovers... A unique concept, but I haven't seen any licenses or radios become airborne of their own volition.

I'm no expert in this sort of thing but my understanding is that
voltages are induced of long conductors such as the power grid with its
many miles of lines and oil or gas systems with its many miles of pipes.

These induced voltages can drive destructive currents in the
aforementioned systems.

It's an OK radio on some accounts but the AGC and sync circuits don't
function well and the audio sucks. Apparently the radio can be modified
to resolve these problems.

> Also I am curious as to how the Eton E1 would compare to the R75 in
> performance as I have heard good things about it as well. I am

You don't have to modify an E1 for it to work right. I don't own an E1
but the specifications and features look good to me. Reports from
reliable people in the news group that have purchased an E1 are good.
Reports from reliable people in the news group about the R75 are not
so good.

Don't pay any attention to the Trolling idiots.

There is nothing immoral about a licensing regulation. I know you
aren't necessarily referring to radio regulations.

On a not so serious note, though..... the outrageous price for a GMRS
license is a crying shame. It is realistically very difficult to
believe someone is going to buy a $20 pair of radios and pay $85 for a
license to use radios that don't even give the user the full benefits
of what GMRS offers.

Don't get me wrong... I 100% support and advocate everyone get a
license... still. I can slightly sympathize with those who resist....
blame Big Business for the confusion.

Hail Eris!
Demon Prince of Absurdity

"And no, I did not have sex with my son. But if I did I certainly
wouldn't tell you. Something so beautiful and precious should be kept
private." -- Kathy L. Mosesian, or possibly not really her, confesses
she may be a liar and committer of incest with her own son, in MID:
<cfcd3f4660694e3afeaadaa2723e9ab1@msgid.frell.theremailer.net>

The reporter asked Colin Powell (or George Bush), "What proof do you
have that Iraq has weapons of mass destruction?"
He replied, "We kept the receipts." -- Bill Hicks

"They thought I was fair game. I was an instrument of purpose to achieve
their desires and not 100 percent real and ALSO that they had me by the
short curlies because I thought that the world revolved around them and
therefore I think that I am fair game and rightly so. If they want to
play dirty, I get to too. It's not a one-way street. I will use the
physcial strength that I have over them, my superior 5'7-3/4" height
advantage, the boxing moves I paid to learn, the suprise of pussyfooting
up to them with their back to me in a public place 18 1/2 years after
the fact and thus not only do will they not know that I am but a pica's
distance away from them, but that I even exist on earth." -- Chris Tsao

is secretly John Wentzky's psychic twin. MID:
<1161246083.152300.195760@m73g2000cwd.googlegroups.com>

Looney Maroon nominee for August 2006 Johnny D Wentzky foamed:
"You never asked someone who goes into areas of the internet that are only for adults who has an underage id somehow or another if they are a cop posing as an underage person online?
I guess lots of people just don't watch dateline or read stories much. Why don;t you go to pervertedjustice,com and see what they do. They are awash in their self-proclaimed glory after they lied to membners of the public.
They are awash in their self-proclaimed glory after they posed as an underage person and agreed to do all sorts of sex acts wioth adult males, and they are adults posing as teenager themselves. They make themsleves into liars by falsely impersonating underage persons and by not fuilfilling the words they tell the victims online in their chats. Why don't you read it where they tell these victims of their deceit about how they have been with grown men and such? Why don't you read it where they say, "That would be cool." after someone makes an advance towards an adult who is posing as a teenager? And, where they agree to meet the person, etc.
Lost control, didn't you?
Is that why you feel as if you need to lie so much now? I see where lots of these false impersonation games are not sticking. They feel as if they can lie and then order the victims to get counseling in the gayblade, governmental, pro-choice tax leech counseling centers. They are doing nothing more than usury and fraud in many cases." -- Wentzky almost comes out of the closet as a pedo/ephebophile in MID:

It isn't a problem of manufacturers supplying radios at a given price
but at is a problem of consumer demand for radios at all prices. There
are very few companies supplying portables at entry level prices (under
$200.00) and even fewer companies supplying advanced portables and
tabletops at higher prices because not many consumers want to listen to
radio programs shortwave frequencies these days.

I could be wrong, but I wonder whether the the real target market for
the NRD-545 and other, comparable tabletop receivers isn't the
community of utility listeners and/or DXers. Most of the folks I know
who've purchased expensive receivers like this purchased them primarily
because they wanted to hear utilities or because they wanted to chase
DX. If this is true more generally, then the shrinking audience for the
big broadcasters isn't so much of a factor here (though it'd be a huge
factor where lower end receivers are concerned).

A separate and interesting question is whether the audience of utility
listeners is shrinking. I have no idea.

Then that's their mistake in interpretation, not mine. Civil disobedience is a far cry from killing, which I never advocate. My approach is more Ghandi-like.

For example, don't buy the overpriced radio license, and then passively resist when the Feds say you have to. Let them be the villains.

Either that, or throw tea overboard when the tax is too high.

BJ

I agree, and to add to this, there are many people who use these radios
for very specific and time-limited purposes. I have a pair, and use
them only infrequently - specifically, when wandering around the
Yellowstone geysers basins to maintain communications with other
enthusiasts and the visitor center. That's only a few days a year.
$85 is just too much.

Actually, yes. It's one of the CIA's stated missions: Assisting groups who
share *our* agenda, whether it be with money, weapons, intelligence,
whatever. Sometimes, they actually pick the correct group to support and the
correct regime to annoy.

> How does it put "the Iraq mistake" in perspective?

The final solution to the situation in Iraq will be similar, if not
identical to the one we would've used if he had NOT invaded the country. It
will involve pressure and influence, as opposed to the murder of our
soldiers by a senile president and handful of very spooky advisors in
Washington.

This is a bit complicated, and may depend more on your electronic abilities and how you like to use a receiver than the two radios.

The R75 is a very good receiver with some real faults. The sync det is as bad as "they" say it is, essentially useless as delivered IMO. There is a lot of info available on the Yahoo R75 group. The sensitivity is reduced on MW, the AGC can use improvement, and the fidelity needs some help (fidelity can impact your ability to ID a weak signal by quite a bit). All these things can be addressed. A good place to look for the mods is Kiwa Electronics:
http://kiwa.com/R75.html
You will see that you can send in the receiver to Kiwa to get the work done or get the components in kit form. If you or someone you know is comfortable doing this kind of soldering etc (I am not) then the improvements can be made at relatively low cost. If you send it in the cost is higher, plus shipping two ways. When done, the receiver is an excellent SSB unit and a good AM unit, again IMO and from info from others.
A real advantage of the R75 is that with the filters provided there is great flexibility in bandwidth. Icom provides the ability to select filters in two IF's both 9 MHz and 455 kHz. (It is a triple conversion design) You can also adjust both if freqs using the dual passband tuning controls. This gives the ability to smoothly adjust the passband width, especially if similar filters are selected in both IFs. You could do this, for example, with the two 2.4 kHz filters as supplied. A good discussion of dual passband tuning can be found here:
http://www.qsl.net/icom/xfilter.html
there is also useful info in the ARRL handbook.

The E1 is an amazing little receiver. It is not so easily modifiable as an R75, but as delivered it doesn't need so much either. It is not like a table top in that you can't add filters by plugging them in, for

example, but what is there is good. It doesn't have dsp, but if that is important to you, it can be added to the audio out, albeit at a cost. It is also not quite like a portable since it has no AM ferrite antenna and no handle, but it works well on the whip and is pretty easily carried due to the "rubbery" surface. The sync det is very good.
If you decide to buy one, look around for a better deal than $500. Refurbed units were recently available through Heartland for quite a bit less, but no more I think. Maybe they or somebody else will get more. Be sure to try the various search engines. You might ask at Universal Radio what it would cost if you didn't want the "free" Grundig radio they offer. Reports are that they will reduce the price as an alternative. There is also a Yahoo group for the E1 with good info.

You have to determine what you want in a receiver and how -you- will use it. These are both good receivers that have both good features and design compromises. (Don't they all!) Decide which best serves your particular needs.
Keep in mind that whatever you read in groups or on sites (including this post), the information is the writer's opinion and reflects where they are coming from with respect to what they use the equipment for and how they use it. Someone who does tropical band dxing would have different needs than a low frequency beacon hunter or an amateur band CW person.

Good luck, and hope that helps, Bob

The R75 is a much much better receiver than the E1. It's not even close.

I believe the E1 is made (assembled) in India from parts/sub-assemblies
manufactured in China. All as designed in the USA (I think).

In today's global economy, there are not so many completely single
country products. For example:

Your Ford may well be assembled in Canada
Your Honda Accord is probably assembled in Marysville, OH
Your GM car has multiple parts from other countries

When a couple of previous JRC models were discontinued, they dropped the price down to just about what a really good used one was going for. THe 515, normally $1499 was dropped to $999, and they went fast. I couldn't swing one then, but a year later, I bought a loaded used 515, memory box, and speaker for $895. I still have it 20 years later. It's had some problems over the years, almost all either cold solder joints on the VFO, or issues with the phono plug interconnects they used for some odd reason. They didn't even solder the plugs on. Strange way to cut a tiny amount of the cost of making a 1500 buck radio.

I think the 525 was 999 when they closed it out too.

Degen is the company which seems to go under a variety of names. It
produces for Grundig amongst others: See
http://www.radiointel.com/review-kaitoka1101.htm (Kaito being another of
their names)

Another reviewer said: " By no means will this be the final word on this
impressive little radio. The DE1102 will no doubt be talked about and
debated when it makes its way to the global Shortwave listening community.
Some will like the DE1102's page system while others may find it confusing
or irritating. But as with all radios, it's how well the radio receives
radio signals in the end determines mostly if it is a "good radio". The
DE1102 is a good radio." in http://www.radiointel.com/review-degende1102.htm

(See later in my message for the meaning of this)

I am glad to hear that someone doesn't regard this piece as a toy and look
forward to your informed review of it? It could well be that I am doing
something wrong and I did indicate that Degen doesn't normally do this type
of thing.

That is all I wanted to hear: That settles it.

I am doing something wrong or there may be a defect in this radio which may
or may not clear itself over time. When I received it, the radio emitted a
distressing whine which over powered all signals on all bands. That went
away over time while I thought I was testing it. Obviously I will have to
await the Degen external antenna before passing my own judgment.

It is not clear whether you know what you are talking about with this
comment: My statement came from an American who spends most of his time
living in China where he has to deal with this attitude on what I mentioned
were OTHER Chinese companies.

Or is your point that you don't agree that Degen aren't one of these
companies and DO produce junk? Not sure anyone around here agrees with you
on this controversial point?

I'm sure that utility or dxers are the ones that bought the NRD and
it's competitors. I was using listening in a broad sense.

> Most of the folks I know
> who've purchased expensive receivers like this purchased them primarily
> because they wanted to hear utilities or because they wanted to chase

>
> A separate and interesting question is whether the audience of utility
> listeners is shrinking. I have no idea.

No matter their specific listening interest the group of buyers for
high-end radios including the NRD is shrinking. It is shrinking to the
point that it doesn't make financial sense for a business like Japan

Radio to tool up a production line for radios that may not have buyers.

My sense is that utility listening has always been a relatively small subset of the SWL group. And it was indeed a lot of fun to chase those signals when there was a lot to decode.

4195. Re: people in the know refer to Gegen as innovative, producing BETTER radios than Sony

Newsgroup: rec.radio.shortwave

I noticed a distressing whineing noise from Kaito KA105, when the whip antenna was retracted into the radio, and the radio set on shortwave. This disappears as soon as the antenna is extended. On opening the radio up, I noticed some sort of metal shielding in the radio that would cover the antenna when the antenna is retracted into the radio.
This would only happen on shortwave with the antenna retracted. I am not sure if this is the same thing that is happening to you. Try extending your whip and see if the sound disappears.
Hope that helps. - Cato

> The scan feature?

What are Phillips features and why would they be on a Degen radio,
unless Degen was designing radios for Phillips.

What specifically is wrong with the scan feature.

Once again, you said it was not picking up any stations. I find it
impossible to believe it does not pick up any stations on any bands.

> controlled inflation of the currency to patch over its money troubles
> and hope that the slide doesn't turn into a rout as it has in other
> countries (Argentina, Brazil, Zimbabwe, Russia, France, Mexico).

Which money troubles are you talking about. When you say controlled
inflation of the currency what are you talking about. Are you talking
about controlled inflation (expension) of the supply of currency? Or
increased prices of goods and services. And how will whichever
inflation you are talking about correct the money troubles you have yet
to define.

> Prices of radios are going to go up.

Now that is insightful. How much and when.

You might want to buy all the Degen and Tecsun radios you can. Just
think of the bargains you would have if the new ones went up in price
20%.

I based it on pressing the scan button and the radio not picking up any stations and enabling the ATS feature adn it only tuning to static. I would have thought that somewhat obvious?

I see you have never owned a Phillips product like a short wave radio or a
pair of noise reducing headphones which have features and buttons on them
which do nothing! (It is not for me to tell you to go out and buy one and
see)
> What specifically is wrong with the scan feature.
It scans past perfectly strong stations. And tunes to white noise.

Illegal immigrants? Illegal aliens?

No. They are simply illegal criminals who benefit the swift meat packing plants and other corps who are wrecking America and the lives of uncountable Americas with their greed and crimes ... look at the avg American city these days and the homeless and poor who live in little niches. Our American standard of living is near third world status in many places.

How can we expect anyone to take law and police seriously when our gov't turns a blind eye to crimes which it chooses to ignore?

What goods? Except for Boeings and armaments and entertainment, the US doesn't have any manufactures to sell. The US trade deficit is running about $80 billion a month and the US is paying for it with depreciating currency.

Currency inflation leads to price inflation. A depreciated dollar will
be used to pay off foreign debts and pensions. Sure, you will still get
$1000 a month Social Security but the prices of everything will have
doubled.

I see my little attempt at humour went right over your head. Of course
a higher price on a Sony ICF-S10MK2 won't make an appreciable
difference, but as you get into the $1000 and up category inflation
does make a difference.

Since we have a difference of opinion, let's meet again in one year
to see who was right . I have been shorting the US dollar for years
with no losses.

Out of the box the R-75 for AM reception on the shortwave bands might
be disappointing, filters are just too wide and while the narrow filter
works fine, it is just too muddy for listening to AM programs. Not sure
about the complaints on the audio from R-75 users, IMO using the 6khz
and 15khz filters on AM the audio is nicer and cleaner than many other
radios I have used in the past in or about the same price range with
the exception of Drake R-8 series but that is a more expensive rig, the
S-AM does not improve anything, my Grundig Satellit 700 runs circles
around the R-75 on AM.
On SSB its a different story, I find this radio to be very good on SSB,
low noise floor, sensitive, selective with good clean audio and just
great overall performance, twin PBT works well and this radio can also
be used in SSB to dig out those weak AM stations in crowded bands I
think this is called ECSS.
I would eventually like to try an additional filter for AM and I wonder
what others have used in the 455khz open slot to improve AM reception?

These are just my impressions after a month of use and without any mods
or optional filters and I have not used the Eton E1

I know what I am talking about. My vague general statement refers to
the quality of Chinese produced products compared to a Japanese company
such as Sony. The Chinese are not up to that quality level but I have
no doubt that with the investment American companies have made in China
it will not be long before they will be up to that same level. Maybe in
a few more years.

> Or is your point that you don't agree that Degen aren't one of these

> with you on this controversial point?

From comments on the news group, Internet research, and my direct
experience with Chinese made products the Chinese are not up to the
quality level the majority of Japanese companies have attained.

I don't think the Degen's are junk but at the same time many have
raised quality issues in the news group with Degen radios.

Hopefully Degen will one day produce a high quality radio.

Cato responds - I remember as a kid back in the 50's & 60's that if
anyone mentioned that something was "Made in Japan", the immediate
thought that came to mind was it was cheaply made junk of the very

lowest quality. "Made in Japan" had that junk reputation, because for the first couple of decades after WW II, that's what the Japanese were known for making. Lots of cheaply made very poor quality goods to sell to us westerners in the U.S., Canada, and Europe. Especially lots of cheap plastic stuff. Even the plastic was the lowest quality plastic. North America was flooded with the stuff. You saw it everywhere you went. "Made in Japan!!! No wonder it isn't any good! What did you expect huh?" sound's very familiar. Cheaply made little transistor pockedt radios. cheaply made plastic toys, cheap motor cycles and thousands of other items.
Foir a number of years the label "Made in Taiwan" had the same reputation. Maybe it still does with some people.
But it wasn't that many years, into the 70's and 80's, before everyone wanted a Sony Walkman cassette player, followed by the Walkman CD player, and Sony T.V.'s. Other Japanese companys, like Hitachi started to make some good stuff. Honda started to make a not bad motorcycle, Honda's first cars rusted out like crazy and fell apart. But look at them today. Much improved, and they've really hurt G.M. & Ford plants in the U.S. and Canada haven't they? Along with the other foreign companys that have taken U.S. and Canadian business. I suppose the same has happened in Europe, but I am most familiar with how all these imports have hurt the traditional automotive companys in the U.S. and Canada. Adapting to these changes is very painful for a great many North Americans.
I worked for G.M. of Canada Ltd. for more than thirty years, and saw how this was effecting the North American auto industry first hand. I just couldn't understand why Americans and Canadians where buying foreign cars built in Japan, Korea, and elsewhere. I expected them to buy G.M., Ford, and Chrysler to support our American and Canadian auto industry here at home.
Ane then Honda, Toyota, and others started building plants in North America!!!

O.K., sorry, I've gotten off topic......
What you are starting to see, is that now some good stuff is starting to come out of China, and people don't want to believe it. That's understandable.
Same thing happened before when Japan started to produce some good stuff, and then Taiwan, and a few others, including South Korea. And history just keeps repeating! But times change.

Why I find the "no code" licensing troublesome.

I first experienced ham radio at the age of 7. Now at two weeks short of 52 I find the whole cw experience satisfying from a competitive perspective. Learning the code wasn't hard. Increasing my speed was the difficult part as most have also discovered.

Did I whine or cry, did I hold my breath, did I toss a fit in front of the examiners? No, no and no!

I practiced hard and when I thought I was ready I took the test and flunked! Boo! Hoo! So what? Not passing a test is not the worse thing that could happen. It told me something. Its failure said I was only one word short of passing. Through the encouragement of the examiners I took a re-test and passed later that day. WOO! HOO!

I understand that some people lack the ability to pass a 5wpm test much less 13 or higher. I'm one who can not go higher than 13. If I try my brain turns into that "other" white meat. <grin>

My belief is that all operators should be able to pass at the very least 3-5 wpm. Why, not simply because it's a time honored method of communications, but because when digital and voice systems go dead or satellites won't function properly, in a real emergency cw, even at a greatly reduced power level can get a message through.

I want to be a pilot or a surgeon but the testing is to difficult. (Waving the magic wand, whoosh!) Ok, now the testing for a pilot or surgeon has been made easier. Does that make them safer or anymore proficient? Obviously we kicked professionalism down a notch or two.

Ham radio is more than only a hobby. As operators we assist our local communities and law enforcement agencies. When others couldn't get a message through, we did. During times of war before the Internet and personal computers amateur radio operators assisted the government in passing messages to families and loved ones.M.A.R.S., ever hear of it?

As far as I know it's still around today.

Making it easier to have some things like the Internet to keep phone cost down and famlies closer together is great. You shouldn't have to be an

Einstein to use that mode of communications.

On the other hand, ham radio is a wee bit more complicated and the operations of any station should only be performed by a licensed operator who can show proficiency not only in voice or data communications, but in a backup method such as cw too.

I don't know what that "good stuff" is coming out of China. The made in China products are low quality in general. Take for example the electronic calipers I bought a few weeks ago that is a knockoff of a Mitutoyo unit. The design is solid being a knockoff and it worked out of the box but was kind of sticky to operate. Taking a closer look in the external nooks and crannies revealed dirt and grit. I figured if the external surfaces looked this way the insides must be worse so I took it apart and it looked like a disaster inside chock full of metal dust and grit. I carefully cleaned the interior (and exterior), reassembled the unit and it works smoothly now. Basically even if they knockoff a good design the execution is crude. The internal parts were crudely made and had nicks, scratches, machining errors but you would not see that unless you took it apart. The exterior looked fine until you took a closer look at it.

I have come across electronic products using wall wart power supplies made in China that were supposed to be UL approved and they were not compliant. The design would not make the safety standards and would also fail EMI/RFI standards. I have no idea how they are getting away with selling this stuff in the USA.

Complaints about radios made in China indicate that once again the environment the units were assembled in are not clean. Switches on the radios would start to fail in a short period of time. This indicates contaminants in the switch assemblies. The radios would malfunction in high humidity conditions. This indicates poor cleaning of circuit boards of ionic solder fluxes used in assembly. The operating design of the radios have some odd quirks but that might be a cultural thing.

China has a ways to go before they come up to the consumer standards we get from Taiwan and Japan. I do expect that they will get there but it will take a few more years of improvements.

www.devilfinder.com Build your own home Weather Station

Actually,you don't even need that.I have seen those phoney ''Meteorologist'' so called weather forecasters on tv around here outright lieing so much,oviously they don't know crap about the weather.Who do they think they are? some kind of famous movie stars or something? If you have lived where you live long enough all you have to do is step outside for a minute and look up in the sky and feel the air around you and you will know what the weather is going to do.Did the big bad solar flare zapp y'all? Around here it was a non event just like I knew it was going to be.

Does anyone else with one of these receivers notice interference from display board? For example, tuning into a station on 1161 Khz, you can hear a heterodyne in the background. Operating the keypad buttons changes the note of the heterodyne. Before I go treating this as a fault I'd be interested in anyone else's radio has a similar problem?

Thanks,

Steve.

They already do that with what was once the First Class Radiotelephone Operator License (now the Radiotelephone Operator Permit). This is a wallet sized card that literally anyone who can sign their name (or an X) can have.

This is not the same thing as a General Radiotelephone Operator License, which all First and Second Class Radiotelephone Operator License holders were issued when the former licenses were abolished. As far as I know, the GROL has also now been abolished. I can't even get a new copy of my GROL, as the FCC tells me they no longer issue them. So much for spending the time and effort to study and receive a First Phone....

"Digital radio in Canada"

"The Commission concurs with the CBC: "...digital IBOC signals will add
a certain amount of noise to a station's analog signal, marginally
reducing its effective service area." and "...IBOC signals can degrade
the service areas of technically related stations located in the same
or adjacent markets." (both of these premises have been presented by
DXers in the U.S. and are generally denied by IBOC supporters. It is
interesting to see them accepted, on the record, by the Canadian
regulatory authorities.)"

"Few recievers have been sold, and there is no interest in expanding
DRB service beyond the six cities where it exists... As a result,
automakers have switched their support from terrestrial DRB to
XM/Sirius satellite radio."

http://americanbandscan.blogspot.com/2006/12/digital-radio-in-canada.html

EAT SHIT, COCKSUCKER - CANADIAN ANALOG AM IS SAFE ! HD RADIO/IBOC
SHALL DIE IN THE US, JUST AS DIGITAL RADIO IS DYING IN CANADA !

For that matter, where does the OP get that a member of the Trinity United
Church of Christ is Muslim? but then, when does anyone need facts anymore..

The American Indians, before we enslaved them, are a prime example of true socialism in action. The entire tribe was responsible for its members. They all participated together and their was little difference between the standard of living of all members. In effect, the chief of the tribe had little more than the least of the tribe.

Due to greed and corruption, socialism has never been able to be implemented in wealthy populations and a few members of the population tend to end up with most of the wealth.

Yeah, certain ethnic groups could not cut the code, so the FCC did the most illogical thing, they eliminated the code. Same reason our schools now place in the 2nd 50 places in the world since 1964. You can piss and moan and say it's not politically correct, but sometimes truth hurts.

> as the FCC tells me they no longer issue them. So much for spending the time
> and effort to study and receive a First Phone....

About ?20? years ago GROL were given a one time oppertunity to get a
life time license,
on the yuckiest cheap paper you can imagine. When I asked the FCC
engineer I knew
he told me if I lost it it wouldn't be replaced. Last time I asked he
told me he thought
they (FCC) no longer had any records as to who held what commercial
license. He
retired about 5 years ago and died soon after from a massive stroke.

I am sure you could find an image on the web, clean it up and insert
your data
and no one would ever know, or really no one would even care.

Terry

I'm always curious when people like Mike use the word "socialist". It's always out of context, which means they were TOLD to use the word. Now, this is just me, but I'm always uncomfortable using a word I'm unfamiliar with. I'll find a substitute, or look up the word. Mike and his Xerox copies don't seem to exhibit this level of concern for language. Probably something to do with their upbringing.

Frankly, it was my experience that certain ethnic groups were unable to handle code was not the problem.

Rather, once members of certain ethnic groups obtained licenses, they were made to "feel uncomfortable" by certain members of the amateur community. Being white myself, I was ashamed for some of these operators ...

I think it is reasonable to say that ham radio was already destroyed
because it has not kept up with change. Eliminating the CW tests will
helbring it back from possible extinction.

Who cares it we get lazy people into the hobby? At least we get some
people.

the problem is probably oxidation. the rubber keys each have a small black spot of conductive rubber. clean these vigorously with a q-tip and isoprophyl alcohol (rough them up good to remove the oxydation from the rubber). next use an ink pen eraser on the little copper foil pads that correspond to each key, but not so hard as to damage or lift the foil trace! clean all eraser residue with a q-tip and alcohol and you are all set! good as new!

The ham bands sound like LIDville nowadays. Have you not been listening and the most dysfunctional newsgroups on Usenet are amateur topic groups. I feel sorry for the good hams that have to put up with the shit. They should make the test to where anyone with a IQ of less than 120 can not apply. I remember listening to some pretty sharp guys on the ham bands when I was a kid. Learned a lot about propagation and antennas etc.. just listening to them. Now days you gotta dig for a good QSO. They should set a part of the hf bands for just CW operators and you can't operate unless you have a CW license and they should have a test to see if your a retarded LID and if so you get the jackoff spectrum. I mean why not?

I'm not talking about equip, I'm talking about brains. The fight here isn't about CW so much as it is about a bunch of guys that wish to not hang out with a bunch of retards and yes there are some sharp people that don't know or use code that would be welcome but the fear is that no code will bring more dorks into the mix and I understand their point.

Brian:

I find the same ratio of dorks-to-brains exists in amateur radio as
exists in the "normal population." Indeed, the amateur topic newsgroups
reflect this same tendency.

A license and/or knowledge of CW has never been able to help the dorks ...

But that's the whole idea ... to stymie uncensored communications
between rational adults.

That's why with every FCC ruling, the joys of scanning are effectively
reduced in favor of it.

I had similar reply to similar questions:

1. Can your version tune
a) down to 50kHz?
b) between 1640 and 3000kHz?
c) to the 162MHz NOAA frequencies?
2. Can it tune in 1/9/10kHz steps on the MW band? 3. Is it firmware
upgradable? Who supplies the upgrades?

Reply:
Hello,

#1. can not down to 50KHz.
#2. only 520KHz to 1710KHz.
#3. no NOAA.
#4. 1KHz or 10KHz in MW band only.
#5. yes, firmware upgradable, customer can upgrade the machine via PC
USB interface, we can help on this.

You are confused about the First Class Radiotelephone Operator License now being the Radiotelephone Operator Permit. The wallet card you refer to was probably the Restricted Radio Telephone Operator Permit. However, there was a wallet card called a license verification card that come along with the First and Second Class licenses.

Here's a link to the straight scoop on all the commercial operator licenses: http://wireless.fcc.gov/commoperators/

GROL certainly still exists and the FCC very much has records. Duplicates should be available but it won't be the blue certificate you were originally issued. They are no longer issue the nice certificates but are printed on paper similar to the amateur licenses.

Lost, Stolen, Mutilated, or Destroyed Licenses
You may apply for a duplicate license by submitting FCC Forms 159 (Fee Processing Form) and 605 according to the instructions printed on the 605 application.

A fee is required. Current information on the fee amount and filing location can be found in the Wireless Telecommunications Bureau Fee Filing Guide, FCC Form 1070Y, or by calling the FCC's Consumer Center toll free at 1-888-CALL-FCC (225-5322). The WTB Fee Filing Guide and FCC Form 1070Y are also available from the fax-on-demand system by dialing (202) 418-0177 from the handset of a fax machine.

When the rules changed some time back, all holders of First and Second Class Commercial Radiotelephone Licenses were issued lifetime General Radio Operator Licenses.

You can still get a commercial radiotelegraph operator license.!

That might make me listen again if he did, IMO, it hasn't been nearly as fun since "Raincoat Charlie" used to key up and say something like, "Break break for the white trash, trailer livin', Hitler worshipping, cracker net!" Vic and the regulars would go off the deep end, and after a little while, he would start up again, "Break BREAK for the Jew Hating, KKK, hillbilly retardate net!!" I thought Harvey, who sounded dead anyway, was going to have a stroke or something. Vic was asking for his call, again and again. Was he really expecting him to give one?

A couple of times, either the "deliberate jammer" or the "illegally operating station" would say something that would set Vic and his minions off like my dogs do when the UPS guy bangs on the door.

I would be on the floor when someone would bait them into going to attack mode. It was great.

Yep, I heard them say things to people who they thought were white that made me cringe. When I did listen on the ham bands, the Extras and Advanced hams were some of the worst, both in the racial crap, they broke the rules deliberately, and seemed to think they were somehow right because the had a ticket for 50-60 years. I know one who used to ignore calls and deliberately talk over calls he didn't "know" on 2 meters. He got a letter warning him about it, and then whined about being "picked on".

And yes, I passed the damn code almost 35 years ago. It did nothing but turn me off from upgrading to a General. A few contacts and I was done, I cant think of many more unpleasant things to listen to than CW. I gave the novice rig back to the guy I was buying it from, and tossed the license in a drawer. I don't even know my old call.

Sadly, as this point, I don't care about HF anymore.

I have seen some pretty decently assembled scanners and other
electronics from China lately. I looked inside the last handheld scanner
I bought, and it looked identical in build quality to the earlier Japan
made model. It's held up very well, in daily use for over 3 years. All
of the major brand model trains made in China today are done very well.
Not quite as smooth as the Kato Japan made ones, but they look about as
good, paint wise, and are very reasonably priced.

There are a number of birdies on this rig. It's not a W-J. It's not
even a Ten-Tec. Hell, even a Drake as a birdie or two.

RF-B65 is a solid rig with great audio for its size. And performance
well above price point. And with sufficiently strong signals, the
birdies are mostly obscured.

Don't let a couple of birdies interfere in your enjoyment of this radio.

This sentence summarizes it very well: This change eliminates an unnecessary regulatory burden that may discourage current amateur radio operators from advancing their skills and participating more fully in the benefits of amateur radio.

It's about 30 years too late, but a start in the right direction. Next we have to eliminate the current test and replace it with something that actually tests for skills that are important. A test that combines knowlege of theory with the skills to safely setup and courteously operate a station. Once potential ham passes that single test he is granted full operating privileges on all amateur bands. Currently licensed hams would be grandfathered in with full operating privileges.

Nice radio and difficult to find. Congratulations.
I would not worry too much about a couple of birdies. The portables
I've used all had a few and you might find a few images if you look
hard enough. I would enjoy the radio as a very well designed and good
looking unit.

Your point, as I take it, is you are pointing out that any individual, group, gov't, etc., which has chosen to embark on an illegal course of behavior/actions only tends to follow it up with another such behavior/action if challenged? If so, it should be noted, such a gov't will eventually reap the benefits of making criminals out of its' citizens ...

Well, certainly you can witness such behavior in any dictator form of gov't, my point is, is that it is a shame our gov't begins to mimic such behavior ...

Greed and corruption seems the mode of operation which is causing us to go the way of Rome.

(17-Mar-05) When dealing with law enforcement, remember that it is they who have the problem, not you. Be sure to inform them of this at every available opportunity, as they will surely appreciate your constructive criticism. Be sure to make them aware that YOU KNOW YOUR RIGHTS! ("The cops like that, when people know their rights. That way they don't have to read them to you on the way to the station." - George Carlin)
The more your fake personalities adulate you, the more respect you'll get!
When confronted with a reality that you don't like: Announce loudly that you are departing, never to return as long as there's an Internet. Come back in three or four days and claim you were drunk, hacked, abducted by alience, or forged. Alternately you can just not even mention your prior departure, and if anyone asks you about it, either ignore them or respond with something along the lines of "YOUR NOT THE BOSS OF ME! *PLONK*!" People really know you mean business then.
Always remain clueproof.
(20-Mar-05) Anyone who does not believe that you are the reincarnation of [$DEITY_OR_PROPHET] is obviously an infidel lacking in faith whose soul in in peril of everlasting damnation.
When responding to one line challenges, post paragraphs of rants and screed in response.
Incoherency is not a roadblock to poasting.
Neither is illiteracy.
Delusions poasted often enough become fact.
Claim you will destroy <insert newsfroup> for attacking you.
When spnaked, send cmsg for Fanboi newsfroup(s).
Find your Lame, Use your Lame, Be your Lame!

Post Edit when the TRVTH hurts.
Always sneck the offending newsfroups.
Always poast pictures of yourself so you can be admired in all your k00ky glory.
Always accuse others of the very acts you are guilty of.
Post lots of boasts about your high IQ and incredible talents.
(20-Mar-05) If you repeat a lie often enough, it becomes the truth.
Anybody who fails to understand this is engaged in a deliberate campaign of misinformation and character assassination.
Always <plonk> somebody just before replying the plonkee!
The k00k considers itself the most intelligent person in any conversation, possibly on the planet. Other people are benighted and ignorant, and have been waiting their whole lives for the k00k to rescue them from intellectual darkness.
Write a self-published book and claim it a success. Bonus points for comparing it to "Mein Kampf" and/or the Bible.
Declare yourself equal to a deity of your choice.
Claim that you've come from other planets.
Claim thousands of past lives.
Frothing complaints carry far more weight when you send them from "legal@" some domain.
Nothing strikes terror into the hearts of your detractors more than telling them that you're archiving their messages for possible use in the future.
Never forget that everyone else posting to Usenet is a paid disinformation agent looking to discredit you.
Usenet is governed by US law. If a poster in Romania killfiles you, he's obviously violating your 1st Amendment rights and can be sued.
Every news admin in the world hangs out in NANAU, and they're just dying to nuke the account of that meanyhead who just called you "fucknozzle". Drop 'em a line - that's what they're there for, after all.
AUK will be closed down. Just you wait and see.
They've nuked hundreds of accounts in the name of free speech and *yours* will be next.
The k00k will, without any trace of irony, lie, manipulate, impersonate, censor, and declare themselves powerful in ways ranging from the ability to have an account shut down to being God Herself, in order to convince people that they are not liars, manipulators, censors, or insane.
Abuse women while telling how many hundreds you've loved. Nevermind that you're one ugly motherfucker and that there were 30,000 femininas that thought you were a scumbag with bad teeth.
Remember that your ko0ky klaims are 'facts', and that 'facts' do not require proof.
Do not neglect to poast your responses to forums that the originator doesn't read. This will make the people in that forum very impressed with how you tear him to shreds without him being able to respond. They like it even better if you are off-topic for that forum.
Keep in mind that lack of evidence supporting your konspiracy theory actually _is_ evidence, of how effective the konspiracy is in hiding.
(06-Oct-05) When spanked, always retreat to the safety of the Ad

Hominem.
(04-Aug-2005) When spanked mercilessly for days on end, proving with each poast just what an illiterate and ignorant fool you are, ALWAYS claim ownership of [person(s),froup(s)]. This works on so many levels. It inspires dread in your opponents that they will no longer be able to poast in their home froup and that they will eventually have to pay rent, to name just two.
Any problems with your poasts are the fault of the konspirators, who are trying to stop you from preventing the extinction of humanity.
Konspiracies that are able to subvert whole governments are always unable to silence konspiracy ko0ks.
The entire United States government is willing to spend millions of dollars for the sole purpose of harassing you.
Hollywood is making movies based on your personal life.
Do not consult psychiatrists or other mental health professionals. They are part of the konspiracy, and will sedate you and lock you away and keep you drugged if you tell them the truth.
Numerology and Astrology are respectable sciences and are useful for proving your case.
Everyone is Tim Hill, or David Green, or...
There is a fine line between trolling and kookery. Find that line and cross it repeatedly. When you are killfiled and/or LARTed for net.abuse as a result, claim victory. If you lose multiple accounts, this merely proves that you are indeed a world-class troll, with a black-belt in manipulation.
If you respond to every post someone else makes, they're obsessed. If they respond to less than 1% of your posts, they're even more obsessed.
Publishing people's real names, addresses, and phone numbers when there's no other way for you to come out of a flamewar with any dignity is cool, and proves that you are a master of secret internet information stores, and absolutely not to be fucked with.
Everyone is out to get you. You can put a stop to this by telling everyone that they're out to get you at every available opportunity.
You are the only sane one.
Those that give you a hard time about morally bankrupt things you yourself admit to are just persecutioners of the new inquisition.
Yelling in all caps and cursing at your detractors is debate. Your detractors laughing at you with sarcastic remarks is obvious anger and jealousy.
If doing something results in the loss of your account, legal hassles, or blunt trauma injury, do it again. It always works better the second time.
Asterisks, lots and lots of Asterisks.
Poking holes in kookscreed is stalking, and is a felony.
K00ks LOVE to "connect the dots". They are, of course, dots that only the k00k can see.
"They laughed at Einstein, too!"

With Icom's background in amateur radio, I suspect the r-75 is better in the ham bands than it is in general sw receive. The Passport Radio review seems to bear that out. My little Sony 2010 is better for sw listening than my Icom 735... but the 735 is better at ham stuff.

Ya makes your choice.

I'de never buy anything off Ebay - I just looked at the Sony ICF-S10MK2 hand-held AM/FM radio, which I got from J&R Music for $10/ea including shipping, and some sellers on Ebay wanted $25/ea + $10 shipping !

4301. Getting ready to hook up a random and hav a question...

Newsgroup: rec.radio.shortwave
Date: 2006-12-16 22:25:04 UTC
From: amyotte@personainternet.com
Message-ID: <1166307904.522580.225200@f1g2000cwa.googlegroups.com>
Source record: 100638

I have read that the best way, quiestest, to hook into a random wire is at the far end, attach a balun, go thru a ground block attached to a ground rod, bury the coax as it runs to the house, go thru another ground block which is connected to another ground rod then into the house.

I have 2 options here, one is the above (about 150 feet of coax), the other is to hook into the random at the near end, thru a balun, feed into the attic to a ground block that has about 40 feet of ground wire attached coming from the ground rod, then to the receiver.

Which is the better? Is there enough difference to warrant the extra expense of the 1st option, more coax, over the 2nd?

Punched down the ground rod and secured the tripod on the boat house today, just have to decide the antenna hook in.

Gotta love the spring like conditions in mid December to do this. Norm is high of -3C, tomorrow +12C.

Brian

Hi John,

I'll give you a hundred bucks for it *grin*

I was looking at the DX-394 as a good platform for experimenting with
detectors and stuff.. Last year they were going for a reasonable 100
bucks or so on Epay - about what I figure they're worth. Now it seems
they are all fetching 200 bucks or so.

Good luck

regards,
NEO

I am sure both pro and con will be said about the receiver, but I don't think it is so bad, looks kewl.

I have heard that it is the most "modded" radio ever (most documented mods available), a quick search of the internet sure turns up a lot of mods, I have been tempted but left it stock.

You pay shipping?

I agree with all the above, including the time frame for when this
change should probably have been made to begin with.

>Next
>we have to eliminate the current test and replace it with something
>that actually tests for skills that are important. A test that
>combines knowlege of theory with the skills to safely setup and
>courteously operate a station. Once potential ham passes that single
>test he is granted full operating privileges on all amateur bands.

This approach would produce one class of license, one test, all or
nothing. I'm not sure that's in the best interests of the ARS. There
is something to be said for having an entry-level license and letting
people work their way up as their skills and experience increase.

Put another way, while there are 8-year olds who have made Extra,
they're the exception rather than the norm. We need to attract young
people to ham radio. Hitting 'em with a written test like the one for
Amateur Extra right out of the starting gate probably isn't going to
accomplish that.

>Currently licensed hams would be grandfathered in with full operating
>privileges.

So you're going to hand Extra privileges to everyone who currently has
a Novice, Technician, General, or Advanced? Well...I currently hold a
General class ticket, and would stand to gain significant additional
band segments on which to operate if I were to be grandfathered in at
Extra-level privileges. Nevertheless, I have to disagree with that.
The fact that the code test is being dropped does not affect the other
technical qualifications for holding a ticket.

There ARE more relevent modes today than morse. Then again, there will
ALWAYS be folks doing morse on the air so what's the problem????

Ok, so my 7415 post has prompted wavetrapper to mention geomagnetic
storm and Telamon's post below has also mentioned less than optimum
band conditions. Is this a whorlwide condition??

So now I have to ask the question; 'Where do I find some information
that relates the geomagnetical conditions to how well my radio is going
to play?'

I know that sucky is not the correct term to describe conditions so
that maybe one of you old buzzard DXperts can point us newbies to a
link to a primer on this propagation that will take some of the magic
out.

I noticed this years ago. It was my hope that I could joint the
amateur antenna news group and learn something but found it populated
with a bunch of idiots that post there everyday with threads that go
into the hundreds. I've never seen such BS in my life even coming from a
politician.

> should have a test to see if your a retarded LID and if so you get
> the jackoff spectrum. I mean why not?

Hams used to build at least some of their equipment. I think it should
be a requirement that you built your own transmitter that passes FCC
specifications to transmit. A prior requirement would be a real
electronics test where you have to solve problems on the test to show
the ability to build a compliant transmitter and antenna system to get a
license. Multiple choice questions are not enough.

Along with the electronics requirement would be test questions on
operator proficiency. There is no reason that marginal people can't be
eliminated from having a license. The bands would then be easier to
regulate and the nonsense would stop.

A person allowed a privilege should be required to show knowledge and ability to get a license and then build the equipment to utilize a frequency in this case. The present licensing situation is pointless in my opinion. Most Hams can't fix their own equipment and they don't understand how their antennas systems work so the country can't depend on them when the chips are down.

No way. What is the point of raising the bar if you let a bunch of
non-compliant people on the bands.

Where? At Yahoo? I'm not a member.

> > The improvement in reception most radios have with sync detection is
> > huge not small and so the improvement is not open to argument.
>
> Is SAM on your RX340 a huge improvement over SSB? (Yes it's a trap.)

SSB on the RX340 is superb. SAM works great most of the time. The SAM
does have the locking problem when you encounter rapid deep fades the
AGC system in the radio can't seem to handle properly. In those cases
you can usually fiddle with the programmable AGC settings to get an
acceptable response. Only other solution is to use an antenna less
susceptible to rapid fading. That would be one with larger cross
sectional area. The SAM can lock on very weak signals and is side band
selectable so with DSP filtering it usually makes adjacent channel
splatter disappear. SAM usually works like a champ.

You really get really excellent sound from this radio as you can
increase the bandwidth as conditions allow for SSB or AM.

"phil" is in the file name, not the document.

>
> > DSB never has a carrier. There is no such thing as DSB and DSB without
> > a carrier, just DSB.

Oh sure, you read it on the net, so it must be right. I stand by my
statements.

Just because a few people get it wrong on the net, doesn't make it
right. I've seen DSBAM used for AM, DSBSC used for DSB. Check out this
college text:
http://www.utdallas.edu/~mtacca/courses/EE3150/Fall-2006/Exp3.pdf
In the equation, you would have to add a DC bias in x(t) to produce AM.
Hence they are producing DSB, pure and simple.

A year has passed and there is still plenty of media coverage and discussion relating to the vulgar situation that arose at Cronulla in Sydney's South. One wonders why any civilised human being would want to go to the extremes of violence that happened that day but sadly we live in a country that is still learning to come to grips with Multi-culturalism, and not doing all that well at it.

In the last week I have witnessed three cases of Racism against Aboriginal people, who were harmlessly going about their everyday business. The first was when I witnessed a young Aboriginal male approximately thirteen years old standing on the kerb of a footpath close to a motor vehicle. The owner came out of a Chemist shop and pushed the youth to the ground, and verbally chastised his skin colour.

The second was when an adult Aboriginal male merely walked past a car with young children it. The children yelled abuse at him and when he replied, 'so I'm black' the woman behind the wheel got out and abused him. What a great role model she was, 'NOT'. The third was when I witnessed another male Aboriginal merely walking along the footpath when a group of males in a Jeep deliberately drove on the footpath attempting to knock him over. When that didn't work they hurled empty beer bottles at him.

It was obvious to me that these innocent people were expected to feel guilty for having been born a different colour. These people it seems

are expected to pay such a price on a daily basis because that's about how frequently this sort of racial abuse happens to them. Like it or not, it is a fact, Aboriginal people are disadvantaged from the day they are born based purely on their colour.

So here we are in Australia supposedly attempting to live in a culturally and racially harmonious environment when in reality we cannot even learn to accept the people who rightfully owned this country before white settlement. We speak of the holocaust that affected millions of Jewish people but forget the genocide that the Aboriginal people were subjected to. There are however laws that disallow such treatment of Human Beings though it appears few people are prepared to abide by them. Doesn't sound like fair Justice to me.

Then now we have Pauline Hanson attempting to return to the Political Arena. I say attempting because going by her past efforts she won't go far. One likens her career to a game of Monopoly. 'Go directly to Jail - do not pass Go. In all honesty I think it's probably a promotional stunt to sell her book. It is indeed a sad affair when people are picked on merely because of their colour. All I can say is that we as a country should clean up our act and learn the virtues of acceptance before we start waving Multiculturalism banners.

I'm Phillip Pye.

I don't see anything right offhand on that frequency that would match. My question is: What radio are you using and what are it's IF frequencies? Next up is what is your location?

http://groups-beta.google.com/group/rec.radio.shortwave/msg/a57711375bb4d0bb

Generally the Far-End feed-point usually produces the
best results : Provided that the Far-End is away from
more sources-of-noise then the Near-End (House Side).
- - - It is not a good idea to run/route your Wire Antenna
Element towards the Utility Poles.

One of the things with the Far-End feed-point is not to have
the Wire Antenna Element come all the way back to the
House. With either the Near-or-Far End feed-point have the
Antenna Element away from the House and away from most
of your 'close-in' sources-of-noise is the better way of Rigging
you Wire Antenna Element.

House to ------- Horizontal Wire
Far-End --------- Antenna Element
Feed-Point ----- Length
150 Feet = = = 120 Feet
120 Feet = = = 100 Feet
80 Feet = = = 64 Feet
75 Feet = = = 60 Feet
60 Feet = = = 48 Feet
50 Feet = = = 40 Feet
Those last few Feet (20%) closest to the House
may be the greatest source of noise-pick-up (80%)
from your total Wire Antenna Element's length.

Note - This is 'if' you have done everything else in
eliminating sources-of-noise in your House and
noise-migration-paths along your Antenna and

Feed-in-Line System.

at least that is how i see it from my 'far-end' - iane ~ RHF

Thanks for everyone's info and it's good to know my B65 is up to spec! As you all said, great receiver and I'm very impressed with it. Compared to my Sony ICF7600D it's a much better radio, both reception wise and in mechanical design. I guess both receivers are of similar age but I've had no end of problems with faulty electrolytic capacitors in the Sony. Internally the Panasonic is also much easier to work on.

I did find that separating the RF board from the display board removed most of the birdies, so it could be that this problem could be improved, maybe something to look at later on but I'm currently just enjoying having a decent, working portable.

My one big gripe with the B65 (and the ICF7600D) was the FM selectivity. I've replaced the FM IF filters in mine (which were 280 Khz) with socketed 110 Khz filters. These have greatly improved the selectivity and sensitivity is the same (possibly even slightly improved). To my mine this is a worthwhile modification.

Are there any other portable sets that are comparable to the B65? I've also got an ICF2001 but I'd not rate this as highly as the Panasonic. Perhaps some of the more modern sets?

Steve.

IIRC -

Larger (Longer & Thicker) Shortwave Whip Antenna that
basically pulled-out Straight-Up and used for general
Omni-Directional {Distant} Sky-Wave Radio Signals.

Smaller (Shorter & Thinner) FM Whip Antenna that
had a rotating Ball Mount and could be 'positioned'
for best local individual FM Radio Station reception.

hope this helps ~ RHF

Hello Ace

I am located in niagara falls and use a RF2600 and 1103...I thought the
station I was hearing might have been Radio Zambia but don't think they
broadcast at that time..I have never heard harmonics on that freq
before but I am starting to think that maybe it was a image afterall...
I guess I got all excited about nothing...

Cheers

It appears to be just another silly purposeless impediment. Once you have proven that you can set up a station safely and operate courteously how do the skills needed differ between one portion of a band and another. Or, which are the skills that improve with time and how does the current test gauge them.

>
> Put another way, while there are 8-year olds who have made Extra,

I suspect that if we took a zero-based approach to the question of testing we might come up with something very different than the current design. Which specific bits of information about radio theory and operational skills are needed to give some level of assurance that the proposed ham can operate successfully and safely.

The days of guys building a shack from scratch using surplus radio equipment and components from the electrical supply house are largely over. My sense is that the technical testing is geared in some manner to that world.

> In the equation, you would have to add a DC bias in x(t) to produce AM.
> Hence they are producing DSB, pure and simple.

The only reason you'd need a DC bias on the transmitting mixer is if
the mixer was of a balanced type. IN that case, the DC bias unbalances
the mixer, allowing for the carrier to get through to the output.

But, long before balanced mixers came along, there were lots of mixers
that let the carrier through.

Hence to get DSBc you'd either need an inherently unbalanced mixer
at the transmitter end, or if it is a balanced mixer of some sort,
unbalance it, with a DC bias or messing with the balance of
the circuit. (It is often easier to apply a DC voltage, but it's
not the only way).

Of course, you don't even need a balanced mixer to send DSBsc. You
could notch out the carrier at the output of the mixer. Just put a very
sharp filter there, that only gets rid of the carrier but not the sidebands.
Not even close to a common practice, but I've seen it played with. I've
also seen SSB transmitters that started with a balanced mixer, but also
used a single crystal notch filter at the output of that mixer, to
increase carrier suppression; in the days of tubes the balance of the
mixer sometimes varied with temperature (and wear) and the filter just
guaranteed good carrier suppresion.

Let's not forget that early experiments with SSB used a very low
carrier frequency, and used the low bandwidth of the antenna to
filter out the carrier and the extra sideband. Obviously a filter
(the antenna) was used to get rid of the unwanted sideband, but it
was also used to get rid of the carrier. The transmitter was simply
a DSBc transmitter, as seen on the "AM broadcast band" today.

>I'm Phillip Pye.

What a load of bullshit! As usual, this lefty commie diversity
worshipper purposely omits the HUGE number of violent racial attacks
performed against Whites by aborigines, muslims, and blacks.
Multiculturalism sucks. Multiculturalism and diversity is an insidious
JEW plot, cloaked in words of tolerance and brotherhood, to weaken and
destroy White nations. In the bizarre world of Jewish
multiculturalism, only Whites must submissive and tolerant towards
others. Non-Whites can act however they want against Whites, and flood
into White nations, with virtual impunity.

Fuck multiculturalism. Fuck diversity. Fuck all you shit-colored
savages. Fuck all you Muslims. Fuck all you Jews. We want a WHITE
nation!

And phuck you Phil. Shut your filthy commie pye hole, you leftist
faggot cunt.

0250 Zambia 4.910 MHz ZNBC. This station signs on at 0300 but runs a
long interval signal, the Call of the Fish Eagle from about 0250. This
is usually followed by great selections of African "Hii¿½Life" music.

Sounds like you should be able to identify that one.

Listening to VoA on 11975 on my DE1103 (built-in antenna) from north of Chicago. I shouldn't really say "listening" because it fades out for 30-60 secs at a time before coming back. Don't know if this is notable or (not)able, but since the transmitter is in Africa thought I'd mention it.

> transmitter that passes FCC specifications to transmit.

Why? And do you have *any* clue as to how complex modern transceivers are? The test equipment to verify that it "passes FCC specifications to transmit"? (Priced any spectrum analyzers lately?) Furthermore, why build just the transmitter? Why wouldn't you require them to build their receiver too?

> Most Hams can't fix their own equipment

You say "Most hams can't fix their own equipment". So what is your point? Most modern equipment uses surface mount technology, which requires 20 year old eyes and special equipment to solder/de-solder. How many people can fix their own TVs/DVDs/VCRs? For that matter, can you fix your own modern car? Why not? You have the privelege of having a driver's license. Heck, to follow -your- logic, you should -build- your own car.

> and they don't understand how their antennas systems work

Again, so what? Some hams are indeed engineers but plenty are mail delivery persons or plumbers or any number of non-engineering occupations that enjoy radio as a hobby. I happen to believe that is one of the strengths of ham radio.

> so the country can't depend on them when the chips are down.

Well, there seemed to be a lot of good press and good buzz about the ham radio performance during Katrina. Maybe you should do just a little research before you tar -everyone- with the same brush.

Sorry, but you come across like a ham wannabee that couldn't cut the mustard...(and just use a bag full of excuses as to why you never became a ham).

Or, due to the thoughtlessness and foolishness of your statements, maybe you are just trolling. :-(

Sorry If i have offended you Mr hjsjms. I am not normally a very pleasant person - that is my way. If you are referring to the Old Buzzard comment it is actually a term of respect that Ham radio guys often use to describe those that have been around and know a lot about the subject. There are a few here that qualify for Old Buzzard status - and I respect them for their knowledge and their willingness to answer the most basic of questions that I pose. And also because for the most part their politics fall directly in line with my own, but I will refrain from that type of discussion as this is an apolitical newsgroup. If you are referring to something else then please be less cryptic and point it out for me.

As far as you are concerned - Do you always answer an earnest question with sarcasm? I prefer not to get off on the wrong foot with others so I apologize again if I have offended you. And sorry for topposting as well. I know it really irks some people, but to tell the truth I don't really care a whole lot for people who can get so upset by such a silly thing.

Now if you would like to follow the lead that Charlie has taken (thank you Charlie) and post a link that might be of assistance to SWL newbies like myself then I'm sure I and others would be thankfull for the kind gesture.

kind regards,
NEO

Assuming your screen name relates to a real amateur license I would
hope by now that you would have found resources for determining how
long one would have to suck before the bands were projected to improve.
Or at least to find resource that describes current band suckiness.

It's odd that I can't find much information at all on this station. I have an avid DX'er friend in the NW whom I will call in a while and see if he can find anything. This is all that was available from the CTRC website:

a.. CJRJ is required to provide programming directed to a minimum of 11 cultural groups in a minimum of 17 different languages. All of the station's programming must be devoted to ethnic programming and at least 95% of its programming must be in third-languages. At least 73% of programming must be in the Hindustani and Punjabi languages. This station is not permitted to broadcast in a Chinese language.

Well, although in 1925 Einstein denied existence of the ether, in 1929
he reneged and accepted the existence of the ether. Without the ether
no electromagnetic wave could traverse what we know as space.

Cat = ether, when it comes to radio (or, ether performs the same service
for radio waves as a telegraph wire does for the dc signal of the
telegraph.)

He was referring to your posting earlier, which said:

==========
The whole problem is that people in the know have started to refer to
Gegen as an innovative company which produces BETTER radios than Sony,
especially after a bit of development.
==========

When you said 'Gegen', he was naturally curious as to the brand name.

I suppose you are going to claim our antennas can shoot out protons
across the expanse of space? That radio waves are nothing but a myth?

Educate yourself, waves need a medium to propagate in; of course,
shooting photons are like bullets and don't!

Surely you are joking. LOL!

As long as we're all here, to discuss and....well,...pick at you, let me ask you a question.

I went to a radio club meeting today. Not that I do radio clubs, but these guys have been recruiting, and it was anotherwise slow day....

Well, during one of the discussions came up the subject of HD. And echoing somethings I've been reading on other newsgroups, and hearing about from more and more of my friends who frequent radio clubs, this one got my attention. Two of the members were asking about cracks for the decoding software/firmware on the chips. Apparently, one of them believes he's sufficiently reverse engineered the hardware to the degree that he's preparing to create his own design to accomplish the same thing, ie, decode HD radio. In this way, he wouldn't be buying a licensed HD receiver, but his goal is to have access to the HD channels, using his own designs and his own firmware. (And he's working on both AM and FM systems.)

So, here's the question: How would iBiquity police this? If he's successful at desiging his own circuitry, and developing the firmware to decode the proprietary channel, what's to really keep him from publishing his findings, as did the numerous SCA adaptor designers who published in Pop Comm and Pop Electronics in the 70's?

Now, the parallels have already been drawn between SCA and HD. But there is a significant difference. SCA is a subscription service. HD is, so far as has been claimed, not a subscription service. If the programming is not proprietary, and not sold for a fee, then anyone can, conceivably, access it by whatever means is available to them. Currently, that's licensed iBiquity technology. But what if, as Linus Torvalds did when he wrote Linux to permit stable computing without dealing with MS and Windows, someone succeeds in creating an HD adaptor which certifiably does NOT use iBiquity intellectual property? And what if, as Torvalds did, he simply released his designs to the open source community?

Would that really be infringement?

And if so, how would iBiquity enforce? Because once that Jeannie is out of the bottle...NO one will be able to cover up her navel again.

If not infringement, how would iBiquity, or the stations making the investment in iBiquity hardware, recover relief from the open source solution?

If the programming is really for free, and not to be subscription based, cannot anyone access it at will if they do so without infringing on iBiquity's designs?

And if this is the case, is not the only solution left to iBiquity or the stations investing in iBiquity licensed HD hardware subscription based distribution...and subscription based keying of receiving hardware?

No matter what the plan is today, the spectre of subscription seems to be an inevitable shadow on this technology.

Hi all. Just wanted to say thanks to everyone who responded. I got the manual, then got it into .txt then got a ham to look for a picture of the rig on the net so he could tell me the button layout. I got all my pl tones in and everything is rorking just fine. Thanks from Dana in Griffin, Georgia. n4pge.

4404. Announcement - The Radio-Mart Red Drap Has Faded To Light Grey . . .

Announcement - The Radio-Mart Red Drap Has Faded To Light Grey . . .

It is soon to be 2007 and the Times-They-Are-A-Changing !

The old 'red' background drap of Radio-Mart is gone . . .

He now appears to have a Faded Light Gray Background Drap
and sometimes for smaller items a Dark Blue surface is used.
http://search.ebay.com/_W0QQsassZradio-martQQhtZ-1

But the Wording of the Item "Descriptions" are 'classic' Radio-Mart !
:o)

Uh, what happened boys? Not enough people wanting to join your little fraternity? Worried that with nobody joining you SHAMS the government may give the airwaves to their rightful owners - the American people? Worried that SHAM radio will become like CB radio?

We know what happened. You arrogant engineers are getting fewer and fewer in number. Not enough new arrogant engineers to take your place. So you had to lower your qualifications just a little. Still, you wont let the scummy CB people in will you?

lol. Keep dreaming people. Maybe at one time you did something that was kind of interesting. Not anymore. Not by a long shot. When you're typical conversation is all about "What RIG you running?" and "What YOGI you running?" you have to figure nobody, not even the most lonely nerd, would want to mess around with you guys.

Buddy, if you are claiming radio waves transverse the universe without a medium, your IQ is zero.

Wikipedia is wrong. Probably why some say not to believe everything you read on the internet.

Of course, your radio probably receives protons rather than waves, you must be a true genius to have figured out how to do that!

ROFLOL!!!!!!!!!!!!!!!!!

John Smith wrote:
> ...

It amazes me that so many are so ignorant to the matter, and that sheer logic alone can prove ethers existence.

Strike a tuning fork and you hear the sound of the fork vibrating in your ears. This is because earths atmosphere serves as a medium for the propagation of the sound waves. In space, you hear no sound ...

Toss a stone in a pond and you see waves, that is because water serves as a medium to propagate the waves.

Now, you and I both know radio signals DO traverse space. And, if there is no medium which propagates the "radio waves", then we need to rewrite some books here. Especially covering how to build antennas capable of receiving "radio protons."

In 1915 Einstein began denying the ether, in a lecture in 1929 he reneged and stated the ether exists. Most catch the 1915+ lectures and miss the 1929 lecture. Indeed, material on that lecture has been ignored.

The ether exists, only idiots would deny that ...

It is not over. 80% of the population is not listening to it. I doubt
more than 1% is listening to HD. You got some numbers to quote?

Building a receiver for your own use should not be a problem. The licensing is for commercial enterprises. He would not be able to sell the information either but could offer it for free. That would be a design he came up with not a copy of the design kit offered by IBiquity.

I don't know if the digital stream is scrambled. That might be a problem.

The elimination of code for testing purposes alignes the US with the rest of the international community. I think this is a step in the correct direction. To those that view code testing as a filter for keeping the ignorance out of Ham radio...look at the FCC sanctions against Ham radio operators...the vast majority are against code licensed operators, NOT the NCT's. I think that blows the pro-code's position out of the water. The pro-code position was weak to begin with...now their rally has been muted. Funny, I don't see "Slowcode" anywhere in this newsgroup after the FCC decisons Friday. I am learning the code now, and will use it one day, but because I want too.

You can find this:
"In the meantime Einstein changed his opinion about the aether concept. In a lecture meant for his inauguration at the University of Leiden in 1920, Einstein stressed that space is "endowed with physical quantities"[5] He held that general relativity attributed tangible physical properties to space including some kind of medium for light, although not a material one. Shortly before his lecture in Leyden in 1920 he admitted in the paper: "Grundgedanken und Methoden der Relativitï¿½tstheorie in ihrer Entwicklung dargestellt":
"Therefore I thought in 1905 that in physics one should not speak of the ether at all. This judgement was too radical though as we shall see with the next considerations about the general theory of relativity. It moreover remains, as before, allowed to assume a space-filling medium if one can refer to electromagnetic fields (and thus also for sure matter) as the condition thereof "."

here:
http://en.wikipedia.org/wiki/Luminiferous_aether

Seems like wikipedia does know about Einsteins change of heart ...

Which is what I was thinking. However, once there were alternative
receivers for which iBiquity was receiving no royalty or licensing fee,
the revenue stream would be threatened.

And it's all about the revenue. Commercial entity or not, letting
reception go open source would trigger the same kind of imperatives that
triggered Ballmer's crack about litigating open source Linux users.

The point being, that without an actual embargo on reception without
the permission of iBiquity, there would be no relief for iBiquity in
recovering lost revenues.

Options would be limited. And relief borne by the listener.

4417. INFO : The Grove "Tunerless" All Band Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-12-18 08:48:34 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1166431714.039428.36550@f1g2000cwa.googlegroups.com>
Source record: 100507

FO&A,

Here is a Re-Post of some INFO about the
The Grove "Tunerless" All Band Antenna ~ RHF

Grove Tunerless All Band Antenna
- a little bit of this and a little bit of that . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9847
http://www.google.com/group/rec.radio.shortwave/msg/64d8ad9dfadd8fcb
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11673
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11679

- - - - - For One and All - - - - -

Grove Tunerless All Band Antenna - a little bit of this
and a little bit of that . . .

Here is my take on the Grove Tunerless All Band Antenna
(See Drawing).
http://www.monitoringtimes.com/html/mtswlprimer3.html

The general design appears to follows that of a "G5RV"
Multi-Band Antenna developed by Louis Varney [G5RV]
http://www.astrosurf.com/lombry/qsl-g5rv.htm
http://www.astrosurf.com/lombry/qsl-g5rv-2.htm
http://radio.thulesius.se/div_mtrl/g5rv.htm
An Equal-Arm "Dipole" Top Section connected to a
Twin-Lead Down-Line Matching Section ending in a
SO-239 Connector which is then connected to the
Coax Cable feed-in-line.
http://www.radioworks.com/cg5rv.html
http://www.wb0w.com/g5rv/g5rv_antennas.htm
http://www.cebik.com/wire/g5rv.html

What makes this Grove Tunerless All Band Antenna
'different' from a standard G5RV Antenna :

1 - The Top Section is not a standard {Equal-Arm}
Dipole Antenna but and Off-Center Fed Dipole -or- in
this case a Windom Antenna given the measurements
Short-Arm of 44 Feet (33%) and Long-Arm of 90 Feet
(67%) for a Tip-to-Tip Length of 134 Feet with 48.5
Feet of Twin-Lead as a Down Lead Matching Section.
http://www.packetradio.com/windom.html
http://www.kh2d.net/windom.cfm
http://www.ve1dx.net/windom.html
http://www.cebik.com/gup/gup9.html

2 - The 4:1 Matching Transformer at the junction of
the Twin-Lead Down-Line Matching Section and the Coax
Cable feed-in-line. Often with the Windom Antenna the
Matching Transformer is at the Horizontal Feed-Point
and there is simply a Coax Cable feed-in-line. With
this Antenna we have the Twin-Lead Down-Lead Matching
Section between the Horizontal Wire Antenna Elements
and the Matching Transformer; which makes it more like
a G5RV Antenna.

Question - So What Is Your Take on the
Grove Tunerless All Band Antenna ?

a little bit of this and a little bit of that - iane ~ RHF

I fear that the shock to SlowCode's clearly decrepit system may have
been too much for him. He does not usually take so long to respond.
Perhaps he is no longer with us... :(

Or perhaps he and his "fist" are otherwise engaged in an orgy of
"mourning" and telegraphic self-abuse, and there is no 'third hand'
with which he can type his twisted viewpoints on this and other issues
at the present time....

And they wonder why I am called
The Poet

Well, I dunno...

I'm not a ham, I'm a pirate.
'We don't need no frikken license, capiche?'

But I do use aged ham equipment, and I do fix my own... and often have to learn something new each time I do it.

The new surface-mount stuff, I couldn't have repaired even when I DID have twenty-year old eyes because my hands were never that steady.

'Plug and play' would be nice, but I suppose one wouldn't learn much that way, other than how to prepare equipment to be shipped to the repair shop, or how to shop for replacement eqpt, should that painful necessity arise...

But preferring to operate in AM mode with plate modulation, more modern equipment just can't be had at a reasonable price, so its Johnson for me, along with its periodic failures and necessary self-service.

For the reason that the amateur service generates necessary equipment of direct benefit to pirate broadcasters, I would want to see the amateur service continue to survive and even flourish... but for those of us who prefer AM to sideband, us musical afficionados, well, there hasn't been much efficient ham equipment manufactured suitable for that purpose in 30-40 years.

Just my own inane ramblings, as I don't really have a dog in this hunt at the present.

'Fifteen men on the dead man's chest
Yo Ho Ho and a bottle of rum!'

- Hide quoted text -- Show quoted text -

The vast majority of Americans "Buy" Cable and Satellite
TV Services on a monthly basis and do not steal it through
backdoor decoders -or- get-around technology.

IBOC HD-Radio's Point-of-Cost to the American Consumer
is in the Price of a New Radio. For these Consumers who
Listen-to-Radio -and- "Want" IBOC HD-Radio the process
of Buying-Up to IBOC HD-Radio will take place over several
years. Some Will and Some Won't. IBOC HD-Radio will
most likely be 'adopted' over time with the turn-over in the
Car and Truck Market. The Buying of New Cars with IBOC
HD-Radios 'built-in' or 'sold' as a Factory pre-installed option.

Most likely iBiquity does not plan on making more than 10%
of their Revenue from the Licensing of IBOC HD-Radios as a
one-time {single} Point-of-Sale Revenue Source.

The Majority of iBiquity's Revenue will most likely come
from the Licensing of the Radio Broadcast {Transmitter}
Equipment to the individual Radio Stations and whatever
Recuring Revenue results from the Use-of-the-Technology
by the individual Radio Stations on a daily basis.

Remember - The Nature of Un-Licensed "Free-to-the-Listener"
Radio Broadcasting in the USofA is that it is the individual
Radio Stations that are the Revenue Sources {Cash-Cows}
-and- All that is required of the Radio Listener is that they
"Listen" and Enjoy-Their-Radios along with the Paid Advertising
that they hear on them - All for Free !

Again - It's is the individual Radio Stations using the iBiquity
IBOC HD-Radio System that are iBiquity's Cash-Cow -not-
the Individual American Consumers {Listeners}.

well that is how i see it ~ RHF

OK so here is a Sony ICF-2010 Shortwave Receiver
+ KIWA Upgrades ! "RARE" ? currently listed on eBay.

Have 'fun' watching it get Bid-Up to more then the
original MSRP of $360 when it was being made.

Sony ICF-2010 Shortwave Receiver + KIWA Upgrades
eBay Auction Item # 140065488511
http://cgi.ebay.com/_W0QQitemZ140065488511
Remember this is 'not' a New-In-the-Box (NIB) Radio and
the eBay Description does admit to some "Issues".

just for the fun of it ~ RHF

Or rather plummeting demand for Sangean. Only after I got my Winradio
G313 I have started enjoying shortwave properly again. My Sangean is
now collecting dust.

HD Radio/IBOC will fail in the US, as digital radio is failing in
Canada:

"Digital radio in Canada"

"The Commission is very concerned about the stalled DRB transition.
Roughly 15 of the 76 authorized stations (including the digital-only
operation in Toronto) are not on the air. Some stations that once
operated have since ceased operations. Few recievers have been sold,
and there is no interest in expanding DRB service beyond the six cities
where it exists."

Why are you worried about engineers. I thought the discussion had to
do with licensed ham radio operators. Are you implying that all hams
are engineers?

I can't say that I've ever heard of a ham running a Yogi. Indeed Yogi
Berra might want to talk about his RBI but given his physical condition
I don't think he will be doing much moving at all let alone running. I
don't think I would want to run Yogi The Bear anywhere - bears are just
too grouchy. And while Yogi tea might be enjoyable while chewing the
rag on 40 meters I don't see a tea bag running very far. And of course
Maharishi Mahesh Yogi might help you move to a transcendental state of
ham radio operation, but his knees are giving him trouble so I don't
think he will be doing much running.

The number of people buying shortwave radios is way down because there
are so many more alternatives for getting information about the world
than there were 30 years ago. If it were otherwise we would see
companies remaining in the business of making portable, shortwave and
even pc-based radios. As it is there are few companies making
shortwave radios.

Can you find code these days outside the ham band? Does the U.S. Army
Signal Corps have any use for code in 2006? Is there a wire telegraph
system anywhere in the world which uses some version or other of Morse
Code?

Every technology has its day and is gone. No one in the first world
makes wool like the Romans today (thank God - urine was an important
part of the process) or wories about using precisely designed
catapaults to knock down castle walls. (outside a special on PBS or
the History Channel)

Maybe there should be a bunch of technological options for a General
ham license of which one should be Morse. The ability to build a good
transmitter should be another.

Nope. The military abandoned it in the 1980's. Maritime services have
dropped it and professional emergency responders all use something more
up to date.

>

It would serve as much purpose as testing a prospective ham for his
proficiency in operating a spark-gap transmitter. Or to use an
automotive analogy to require prospective drivers to be proficient with
a horse and buggy.

> The ability to build a good
> transmitter should be another.

The days of hams building a shack from scratch are long over.
Requiring the construction of a transmitter would not provide any
useful information about the suitability of that ham to operate on the
ham bands. I think that requiring a ham to demonstrate both that he
could assemble the components of a station in a safe manner and could
operate using voice in a concise and courteous manner would provide the

most useful information. Couple the operating competency test with a written one that tests for knowlege of radio theory and the result could be the first meaningful ham radio exam in over half a century.

When I was a kid, 35 years ago, it was the same story. "People aren't
listening to shortwave the same way as they used to." "Companies
that make shortwave receivers are going out of business."

Yet, 35 years later there may be a better selection of shortwave
receivers than back then. Certainly, it may be easier to get a cheap
but good receiver than back then. I paid about $80 Canadian for
my first shortwave receiver in 1971, and it was horrible. Now,
I can get a likely horrible shortwave receiver for far less, and
get digital tuning to boot.

The World Monitor series was produced from the 1960's into the early 1970's in fair numbers. They will catch quite a few stations, however you have to enjoy making 30 year old technology do the most it can (I do). Such as an analog dial that is at best approximate in accuracy, electronics that are no longer at their prime, etc. The sound from those boxy radios is quite full and mellow. I used a second hand world monitor as a shop radio for about 5 years and enjoyed the heck of of it. Have fun!

> I also would like some ideas on replacing the
> missing left telescoping antenna; what would make a good replacement.

Basically anything that fits unless you can find a dead donor radio for cheap at an estate sale or on Ebay. Radio Shack sells some general purpose replacements, so you might be able to get one to work with some filing.

As a matter of fact, you can:
http://www.radio-electronics.com/info/formulae/radio-operation/morse-code.php
"The main area in which Morse is used today is for radio transmissions.
While the requirement for ships at sea to be able to send Morse code
distress signals ended on 31st January 1999, many other still use Morse.
Some ships still use it as a cheaper option than the satellite
communications systems that are in general use now. Also some armed
forces still use it as a last ditch form of communications."

http://www.astrosol.ch/networksofthecisforces/aboutmorsenetworks/index.html

http://www.recruiting.forces.gc.ca/v3/engraph/jobs/jobs.aspx?id=277&bhcp=1
"Communicate inter-ship by ship/shore radio teletype, ship/shore
satellite, voice and radio teletype, video conferencing, chat,
facsimile, email, tactical international and administrative voice radio,

Hi. The new Sangean DT200VX is the replacement for the famous, DT200V.
C Crane claims "better AM reception." Although I have the old model,
I have ordered a new one because of the even better Am reception.
Also, the new one has a backlight, and is supposed to have better
sound. Any opinions? What do you think?

People still ride horseback and use boats powered by wind energy. Or for that matter, strap very expensive sticks to their booted feet and slide down a snow-covered mountain after paying a small fortune for "lift tickets". Expending energy and lots of money to go up and down the same hill over and over in the freezing cold.

By any reasonable measure, these are obsolete methods, and probably not all that logical.

But that's entirely beside the point.

Ham radio is a hobby, and some people enjoy working CW. More power to them, and I hope CW continues to be used as long as there are people interested in using it.

My idea was to retain the CW requirement for the highest class of license, or as an endorsement to the lower classes of license. The CW portions would remain restricted to those who hold the endorsements, and people who care a lot about CW can continue to demonstrate their proficiency via their callsign class.

And perhaps add more operating practice questions to keep the LIDheit down.

That said, I truly don't see the logic in demanding proficiency in CW when the majority of hams probably use voice or (true, computer-based) digital modes today. Isn't it a little like requiring mastery of horseback riding to get a license to drive a car? If there's something wrong with this analogy (and note: horseback riding can be a useful skill in some circumstances one might find oneself in, just like CW can. But that fact doesn't justify requiring everyone to learn to ride horseback in order to get a license to operate a car.)

Just my 0.02. Opinions seem very heated on this topic, but to a degree it just sounds like people who worked to get their CW endorsement being bitter that other people can get what they did without going through the same process. That's understandable, but doesn't really have much to do with reality or progress, which is that a large number of hams really aren't all that excited about working CW.

I just received the Sony ICF-S10MK2 pocket-radio and it is on-par with
my more expensive digital PLL radios - if you are interested, here is a
review of it on RadioIntel.com:

http://www.radiointel.com/review-sonys10mk2.htm

It was only $10, including shipping, from J$R Music (also, on
SonyStyle.com). Here is the review, I wrote on Amazon, under
"analogAMforever":

http://www.amazon.com/gp/product/customer-reviews/B00020S7XK/ref=cm_cr_dp_pt/105-4630159-9
046047?ie=UTF8&n=172282&s=electronics

Awesome radio for $10 !

My YB400 (the older black model) was an excellent performer, except for battery usage. It ate 'em and used 6 at a time. A decent wall wart and RFI/EMI shielded surge suppressor was my choice for power due to the above mentioned consumption of batteries.

$25 is a real bargain for the performance it gives, assuming you have tested it and it's picking up SW stations.

Try some of the English language broadcasts listed in various formats at http://www.primetimeshortwave.com

4456. drake r8 line longwave dx performance and the r75.

Message-ID: <1166482290.306654.120950@73g2000cwn.googlegroups.com>
Source record: 100546

just wondering i don't own a drake r8, r8a or r8b, but i am thinking of purchasing an r8 or r8a. does anyone use this radio for dxing NDB's and how does it perform on longwave. i'm also reading alot about the r75 as a pure dx radio, especially with the mods, but it seems the drake never gets the heads up vs the r75 as a pure dxer. it also seems that the drake is the better BCB listening radio due to its better audio. i would love to hear from someone who owns both. and has compared them in this respect.

thx, john

Pressure for change from without the system is often done by means of civil disobedience. Reference citizens band for instance. Even though many did have licenses (I got mine when they were still $20, quite a lot of money in the early 70's), most did not, and would not. Imagine if CB's were as cheap and plentiful as GMRS handie talkies are now?

It's not a bad radio. I received one as a gift a while back. But it doesn't
even have full AM X-band coverage.
```

>From Maryland, there doesn't seem to be much in the new X-band, anyway;
the radio is awesome enough that it doesn't really matter. I bought
three for myself, so if I drop or lose one, who cares at $10, and I can
always have a relatively new radio to play with, and can always order
plenty more ! With the Sangeans running $60 - $70, one might as well
get a Degen SW radio for the same price, plus if one needs to replace
it, there is something to cry about !

Passport tested the R-75 with the Kiwa Mods;

review said the " Hi Fi" Kiwa mod is the one to get..

Review gives it 4 1/2 stars (Cost $599 + $35 for Audio upgrade)

Japan radio NDR-545SE also gets 4 1/2 stars (Cost $ 1,899.00)

(interesting review below)

http://www.dobe.com/wts/funk/AOR7030vR8A.html

Much depends on how deep your pocket is;

- and what kind of antenna you can set up..

Looking back through my editions of Passport I see that The Drake R8 series
always seemed to get 5 stars, no mods needed.

dxAce

Source record: 100561

Just picked up an ANC-4, and am pleased with its performance so far; however, I'm having trouble with my noise antenna, almost regardless of length, being overloaded by a local broadcast station. According to the manual, as well as a post Steve submitted here a few months ago, there's a jumper which can be moved to attenuate the MW band. Unfortunately, this jumper, JP3, isn't obvious to me on this board. I'm not sure if it has been removed by the previous owner, as I bought it used, or if I'm just not getting something. Is this a pretty straight forward thing that I'm just missing somehow? Also, as far as wires go, which have you found to perform the best as a noise antenna? I'm currently using an inverted L of sixty or so feet phased against the ALA-1530, which works fine aside from the overload issue.

OK. I will take the time to explain this to you. If your antenna DOES
NOT emmanate waves into the ether, then it must shoot sub-atomic
particles, and if so, that is HIGHLY DANGEROUS. As these sub-atomic
particles traveling though your body would cause cancer, DNA damage, etc.

So, stay away from your antenna idiot! <Laughing Out Loud!>

I am sorry I see nothing wrong with people who are Muslims who have been driven from their land and persecuted;

and;

I see no fault in people who have a Black skin and have been driven from their land and persecuted.

I am unable to JUDGE a whole Religion groups as you do or humans who have skin that is a colour different from mine as you can.

I have had a black skinned Muslim woman as my doctor and have been nursed by black skinned nurses.

I do see a problem with a small group of Lebanese Muslims who actually have some problems integrating into our society.

However unlike you Reg I know the the Muslim religion has been in Australia since before 1885 when they opened their first Mosque in Adelaide SA. I also know that we named a TRAIN Journey after them and they were responsible for opening up large areas of Western NSW and Western Queensland and Northern South Australia.

I am sorry for people who think like you Reg. You are able to DEMONISE whole groups of people because of their skin colour or because of their Religion.

I sincerely hope that others who see that we Australians males are so violent to our women that we must have TV adverts paid for by our Federal Government in an attempt to stop this Violence; DO NOT THINK THAT ALL AUSTRALIAN MEN BASH THEIR WIVES. You of course think that do you not Reg?

My point Reg is that we have over 280,000 Muslims in Australia and only have a problem with less than 3,000 Lebanese Muslims and a very small number of radical Muslims. We are addressing this problem. We have over 276,000 who are very good Citizens and over 85% of these were born here.

So you say why let these people settle here and I say that with the exception of a small number of Racist Bigots we are a very tolerant and all embracing society, so why not?

The Drake R8 series are good all round radios. They have all the
essential features for quality broadcast listening, Dxing, utilities,
SSB ham reception.

The R75 makes an excellent door stop to the radio room.

The "ether" does have its proponents. In any event there just may may be
a measurable asymmetry to the universe.

dxace and telmon,

exactly my feeling - the drakes come with everything you need - i have
a palstar and many people say the palstar's deep audio and low noise
floor is similiar to the drakes - if thats the case i'm going with an
r8a - also do not like the idea of sending out my radio for mods right
after i purchase it new - seems it should have all the goodies already.
have you guy personally used the r75?

I have owned all the Drake R8 series and like to do a bit of NDB beacon DXing as well. The R8 series narrow filter of 500 Hz is not quite narrow enough where the beacons are crowded together, so the Icom R75 is likely to be a better bet, albeit after a lot of expensive mods and additional pricey filters.

First off you have to get rid of the R75's attenuation below the HF band - for this you will have to get Kiwa to do the mods.
Then you will have to add the narrower roofing filter and add the 250 Hz CW filter.

After spending all that extra you should have quite a mean NDB beacon DX machine.

A mean DX machine for CW beacons and value for money at $1500 is the Icom 746Pro as it is digital with a 32 bit processor and infinitely variable filters. Like all the Icoms though, you will have to remove the LF/MW attenuation though.

==========
Albert Michelson, physicist - Astounding ethereal result (1852 to 1931)

Polish American physicist born in Strelno (now Strzelno, Poland).

In 1887 Albert Michelson, funded by Alexander Graham Bell, inventor of the telephone, developed the interferometer. Together with the American chemist Edward Morley he used the interferometer to measure the speed of light with great precision.

At that time, most scientists believed that light travelled as waves through the ether, a substance that filled the universe. They also believed that the Earth travelled through the ether. The Michelson-Morley experiment measured the Earth's velocity through the ether, and found it to be zero. This proved that the ether does not exist! (By now, the ether was very different from those of Descartes and Newton).

Eight years later, Einstein's Special Theory of Relativity explained this surprising result, giving weight to his revolutionary theory.
Michelson's result on the speed of light was key to Einstein's theories of Relativity.
Michelson's results showed that there wasn't an ether - as thought by Descartes and others.
Michelson developed ideas on the motion of the Earth from those of Foucault
With Maxwell's equations, Michelson's work led to the idea of electromagnetic waves in free space.

I don't think John Smith read the entire section on Ether...you need to update your Physics book to the late 20th Century. Ether is considered a non-issue in modern physics theories.

"Today, the majority of physicists hold that there is no need to imagine that a medium for light propagation exists. They believe that neither Einstein's general theory of relativity nor quantum mechanics have need for it and that there is no evidence for it. As such, a classical aether is an unnecessary addition to physics that violates the principle of Occam's razor.

Moreover, it is hard to develop an aether theory that is consistent with all experiments of modern physics. Any new theory of aether must be consistent with all of the experiments testing phenomena of special relativity, general relativity, relativistic quantum mechanics, and so on. As outlined earlier, these conditions are often contradictory, making such a task inherently difficult.

Nevertheless the intuitive appeal of a causal background for "relativistic" effects cannot be denied. Some physicists hold that there remain a number of problems in modern physics that are simplified by an aether concept, so that Occam's razor doesn't apply."

I know of no physicist who would claim radio waves traverse the universe
(space) with no media to distribute their energy.

Like I say, prepare a paper, I am sure the scientific community is ready
to hear how radio waves are but a myth ...

I trust "Newton's Balls of Force" can still be found in high school physics labs. I trust most have seen how energy can travel through the balls as a "wave" and only the end balls will swing free in an effort to "dispel" the energy which is imparted to the device.

In much the same way, tesla described the "travel" of "radio waves" in the ether. It is true, einsteins "gravitational ether" does seem to break occam's razor, true physicists ponder these things ... however, present theory depends on a medium for waves to travel in, otherwise "radio waves" are a myth, if that is what you claim--so be it ...

John Smith,
You seem to be consumed by this ether subject yet you give no current references, only historical data from the early 1920's. You seem to enjoy the attention this thread has generated, yet offer nothing even remotely update on this subject. Fact of the mater you have taken ether beyond theoretical physics and have tried to apply it to applied physics...Antenna radiating waves through an ether!!!! I feel you are have made a leap that hasn't been proven scienticically by experiment yet! Only theory in some circles...which rise and fall with eb scientific conjecture. Bruce

Nope.

Some people like the radio. You can modify it and its an OK radio to
listen to the broadcasters on but the claim to fame is Dxing using SSB.

You can probably buy a used one with all the modifications already
installed.

I'm sure that nearly everyone in the circumstance DID consider human
sacrifice the "right thing to do", since that was how they were raised and
indoctrinated into their culture. Some even thought it an honor to BE that
sacrifice, just as there are those in modern times who feel the same way.

>
> -Brian

I don't have that problem, however I'd be inclined to try a LC series trap
in series with the offending antenna, as the cheapest experiment (pick L and C
to resonate at the broadcaster's frequency, to remove it perferentially), or even
just a resistor, to see if overload is really the problem. Or a MFJ-956 passive
antenna tuner, off the shelf.

Or swap the antennas, and null the broadcaster with the ALA-1530, which is then the
noise antenna, by orienting it. Or you can null the station with the wire antenna,
though it's likely to be more inconvenient to reorient. Every antenna has null.

A slight disadvantage of tuned traps is that they change the attenuation across
the bandwidth of a station, so you can never quite eliminate the entire station
across the audio spectrum because the second antenna still has the original
shape.

It's a particle that has no mass, yet it can impart momentum and it
travels through space or air in a transverse wave motion but it is not a
wave and it has no charge but it carries the force of electromagnetic
fields as it travels through space.

I'm sticking with Maxwell for now.

I had the opportunity to use a Kiwa modified R75 for about 5-6 hours sometime back, side-to-side with the Drakes. I wasn't impressed. Neither was the new owner who sold it on and purchased a Drake.

However, as I don't do any NDB DXing, John Plimmer may be quite correct about the narrower filter issue re the R75 vs. R8x.

I am definately not a "radio geek", just a radio lover, but if it is
any larger then maybe a larger ferrite-rod, a tuned input loop
(whatever that is), or an improved receiver chip (whatever that does).
You should definately try out the Sony ICF-S10MK2 - it's analog-tuned
so there is no PLL synthesizer noise...

The first method is better because you can use a short ground wire between the balun and the ground rod to make an effective RF ground. The balun should be located close to the ground (earth) so the grounding wire to the rod can be kept to a minimum length (no more than 2-feet). The ground wire in the second method is much too long to be an effective RF ground. It could act more like an antenna for picking up common mode noise.

I think you missed the point of my message which is that no one else thought
it necessary to pick up on my spelczech's typo of Degen to Gegen and seemed
to know that obviously I was referring to Degen and not some other
completely unknown company. People dont start to refer to an unknown
company in a wholesale manner and give the company's products great reviews
and start to refer to their development policies if the company is unknown.

Before this thread got started I'd never really heard of the practice of using
the extra length of coax and hooking up the random wire at the far end versus
the closer end.

That was my first shortwave radio, and I still use it regularly. You
got a bargain.

Only big drawback with the YB400 is that the SSB performance is not
that great (no separate lower and upper sideband setting). Still, a
great radio for program listening, and you can get some decent DX with
it.

I am still having a problem getting my head around the short ground
connection to the rod.

What is the difference between say 40 ft. of ground wire to the ground
block versas the outer coax jacket going 40 ft after the ground block
that is 2 feet from the rod.

Would either not act as an antenna for picking up common mode noise?

Source record: 100718

With the exception of the poor AM audio, the R75 is a good receiver throught its whole tuning range, especially after you remove the MW/LW attenuator. It is very good for dx, but because of the audio quality, I only turn it on once or twice a year, and that is for about 20, minutes at a time. One of these days, I will do the audio mods.
Even Icom's general coverage amateur transceivers do a good job throughout their entire tuning range, once you remove the MW/LW attenuators. I had a 735 years ago, and it did work better than the Sony 2010.
I would suspect that something must not be entirely right with your 735. The 2010 is a very good receiver, but it is not in the class of the general coverage amateur transceivers unless you take the AM Sync detection into account.
Some of the older crystal controlled amateur band transceivers might not work very well out of their normal tuning ranges, but that would be because of the input bandpass filters that were limited to the amateur bands.
With the newer upconversion transceivers, this is no longer an issue since suboctave filters are now being used in the front end. This allows optimum performance over the entire tuning range of the radio.
I hope this helps.

dxAce, Don't you have your antenna feeds connect to your wires a fair
distance from your house anyway? (I say this based on a cursory look at
the photos on your website...)

Thus, in your circumstances, it may not be all that critical...in which
case I might not have stumbled across it either. If I could connect
farther from my house, I would - but in my case, it would put the
lead-in adjacent to one of two sets of electrical lines that partially
rim my yard. Living in the city can bite sometimes (to put it mildly).

True, but statistically, the simpler the solution is, the more likely it is. Nature does, in general, like simplicity.

A corollary of sorts is Sherlock Holmes' (Sir A.C. Doyle's) assertion that, once all of the other logical solutions can be discarded, the remaining one, regardless of how improbable it may be, is the correct one. This doesn't speak to Occam's Razor, really, but to suspension of subjective doubt and opening one's mind to possibilities.

I compared the board to a schematic I found online which shows the bc trap and jumper components. Apparently the model I have is an earlier version lacking these revisions. Regarding your suggestions, swapping antennas proved ineffective, as the loop generally did not hear the noise, and when it did the level was far lower than on the wire, making canceling difficult. Using a twelve foot dipole I had no overload issues, but found it to be too short in some instances. I'm still looking for instructions on building a trap or bcb filter, but I'll keep experimenting with antennas in the meantime.

Meat Plow wrote:
> Worth the 25 bucks I bought it for?

Yep.

Mine (for which I paid a lot more than $25) only lasted for about 3 years before the PLL started unlocking, causing loud noises, pops, and loss of reception. But if you get a year's service I'd say it was worth the $25. When working it's a decently sensitive & selective receiver, reasonably overload-immune, (not perfect but a lot better than most portables) and while the SSB reception isn't as easy as on an ICF-2010, it does work, and it's a lot less expensive.

I'd buy another one if I could get it for $25.

Radio signals are photons, little quanta of light energy, which have characteristics of both particles and waves. They are characteristic of particles, in part, in that they do not require a "medium" through which to travel and can physically impinge upon other particles. They are characteristic of waves in that they can be seen to resonate at specific frequencies and interfere with wave characteristics of other quanta. And vice-versa. Please excuse the imprecision in my language, it's been awhile.

When you deal with mechanical waves, you must provide a medium for them to propagate. Quanta are different, and do not always conform in obvious analogous ways to mechanical waves. There is a hypothetical all-pervasive quantum background that seems to be the source of the characteristics of quanta, but this does not equate to an ether.

I am not an expert in quantum theory or relativity by any means, I just have some educational background in quantum/radiation physics, and I love astronomy and cosmology...and one tends to absorb information about beloved subjects.

Hey - it wasn't me who brought up the idea that mindlessly doing what the law requires is always justified.

And, if the cost of the license is too high - there are some that would argue that it DOES have something to do with ethics....so "geez" back atcha. It isn't hard to imagine a fiscal conservative thinking it another unethical aspect of big government...just like excessive taxes or anything else the government nicks you for.

4544. Walmart becomes Communist Party recruiter of last resort

Newsgroup: rec.radio.shortwave
Date: 2006-12-19 18:48:14 UTC
From: Guerite <aim@their.head>
Message-ID: <12ogcuqgf2hg399@corp.supernews.com>
Source record: 100734

Wal-Mart, king of the capitalist retailers, has climbed further into bed with the Chinese Communist government that supplies its stores with so many cheap goods by setting up a Communist Party branch in its corporate headquarters in Shenzhen.

Dubbed "another breakthrough" for Wal-Mart by Wang Suiming, a Communist official in the city, the new organization was established last month, according to Shenzhen Special Zone Daily.

Wang anticipates the move will lead to other foreign-financed companies boosting the Communist Party.

In August, Wal-Mart set up its first party branch in the northeast city Shenyang.

According to the Constitution of CPC, every party member must be organized into a branch, cell or other specific unit of the CPC to participate in the regular activities of the party, and primary party organizations are formed with at least three full CPC members.

Wal-Mart Stores Inc. entered the Chinese market in 1996, and it now has 67 stores in 34 Chinese cities, with more than 30,000 employees.

http://www.worldnetdaily.com/news/printer-friendly.asp?ARTICLE_ID=53416

As of 1:02 PM EST today, 16,493,292 people have withdrawn from the Chinese Communist Party http://en.epochtimes.com/211,95,,1.html

Chatham House sees Communist China as a "megapower" by 2020

The cost of a GMRS license was probably no big deal until all those cheapo handhelds came out. Who the hell is goin to pay $75 to license a $25 radio? The license requirement is outdated yes, unethical and immoral, uh, no. I'm pretty this requirement will go the way of CB license someday.

Neutrinos - you were right the second time. These little babies are so tiny and of such high energy that they are hard to capture or even detect.

Neutrons, however, being big and heavy, pretty much stop on collision with anything, once released from an atom.

It isn't the license - it's the cost.

> I'm pretty this requirement will go the way of CB license someday.

Probably right. In any case, for my few days per year use of these
things to hopefully contribute to a valid public purpose, I am not
going to pay $80. Unethical or not, it's just silly.

well so much for anyclaim Morse Code testing produces better peopel as
war?

and the posting seemingly forgets in making this claim "Apparently the
order came without even following usual NPRM protocol." that last
jully the FCC release it NPRM on this very subject wherein it rejected
the idea of retaining Code testing for the extra class as proposed by
the ARRL when the writting became clear on HF in General so to say and
that the FCC in jul 2005 stated it proposal to end code testing in the
ars some 6000 coment weere filed

another smal the pressrelase on the R&O was made on the 15 dec 2006
not the 18th

and the statement that NoCode has been unopposed for the past 20
years? LOL has this loon been on some other planet hell he would have
to read RRAP a few time over the years to know that the ProCode
postition has been alive loud and in the NoCoders faces (as well as
trying to crawl thought their lives in some cases loking for materail
to blackmail them with)

this Said I certainlly support right to try at this late date to
organize and petion the FCC first to recosider its desicsion and then
when as is like that fails to pertion the FCC with RM petions calling
for renwed code testing. I doubt they will have any real sucess but
hat is thweir constitutionaly protected right

Just like capitalism!

Not knocking capitalism - I am all for it - but in most any society
where wealth is available, some are good at getting it, some ain't.
Wealth is concentrated in the USA in the top few percent, as it is most
everywhere else.

As RhimJihm it was a SCA radio for decades.
Now it has a broadcast license for the first time over-the-air in
the clear and not Sub-Carrier-Audio (I think on 1320)

There are two primarily-south-Asian (Punjabi, Hindi) licences
given out in the most recent rounds.

See : http://members.shaw.ca/nwbroadcasters/recentnews.htm
for general news of the region.

Sorry, I still don't get it. The antenna is where the antenna is!

Now I could imagine that it would make a difference (though slight) if for example I were to feed my 200' wire at the far end (east end) in which case it might just receive just a bit better to the west depending upon the frequency.

By the way, my matching transformers are grounded at the feedpoint with about 9' of ground wire (horrors!).

http://www.iserv.net/~n8kdv/pics.htm

Antenna pic is looking west, at the end of the then 100' wire, now extended to 200'. Pic was taken in Nov. 2001.

This may be the key right here. Getting the *groundpoint* well away
from the house keeps it out of the hornet's nest of RF that swarms
around most homes, and prevents it from becoming a significant conduit
(at least that's the theory). For most people, this will mean feeding
it at the far end of the antenna. In my own case, I have RF sources at
all points of my smallish yard, so it wouldn't make a lot of difference
where I feed and ground the thing. A windom-style antenna with a
central feed and ground point might help, but even then I'd only be
about 15-20 feet horizontally from any major RF source at best.

I don't think the groundwire length makes that much diff, as long as
it's well away from RFI.

> http://www.iserv.net/~n8kdv/pics.htm

Nice setup - nothing too high, over open ground so it's easy to work
on. Even though it's sort of low (maybe ten feet?), you get the
probable advantage of relatively quiet RF environment - well, I guess I

can dream!

Kwanzaa is from a Swahili word, "Kwanza", which mean first which comes
from the phrase "Matunda Ya Kwanza" which translate as "First Fights."

Kwanzaa start on Dec 26 and Omega One Radio will help selibrate it by
playing Kwanzaa fight music all day. Be sure and listen and send us
signal report for a nice Kwanza qsl card back from us.

In meantime, happy Kwanzaa and merry Christmas!!

Yep, sounds like a high pass filter is what you need. You might be able to pick one up on ebay for a reasonable price, though of course building your own is always the least expensive course.

An analysis of recent census data indicates that the presence of illegal aliens in California is costing the state's taxpayers more than $10.5 billion per year for education, medical care and incarceration.

The report, written by the Federation of American Immigration Reform, or FAIR, states that even if the tax contributions of illegal aliens are subtracted, state government outlays still amount to nearly $9 billion a year.

The $10.5 billion figure translates into a burden to native-born residents of $1,183 per household.

4577. KAITO 1103 old or new versions?

Newsgroup: rec.radio.shortwave
Date: 2006-12-19 22:13:30 UTC
From: al.m@3web.net
Message-ID: <1166566410.363243.189400@48g2000cwx.googlegroups.com>
Source record: 100867

I've just bought a slightly used 1103 (looks like unused), and can't figure out which one I've got. The guys said it's a 2006 version, but he didn't have anything with date of purchase - any receipt, or anything. I've read a lot before choosing 1103 over Sony 7600 (costing twice as much and not any better).

My 1103 does have "shuffling" when rotating the tuning jog-dial - light "blip-blip" in quiet sections of MW and SW. It is barely audible, and in noisy sections of SW I don't hear it at all. I've read that this defect has been eliminated after March 2005.

Q1: Anybody has this "blip-blip" on his 2006 model? Is there anything else that makes the latest 2006 models different from earlier ones?

Other than that, I'm satisfied. Functions are almost intuitive. Some buttons are too close to each other, and I would like them to be larger too. My apartment i is a RF nightmare - downtown Vancouver (Canada), wooden building, but few hundred yards from railway depot and some industries, and mountains all around. So I'm not surprised to hear so little on SW. Just a few stations with a so-so quality here and there, in 41, 49, and 31 m bands. MW is astonishing - not only I hear a bunch of them in neigboring Seattle 200 miles away, but also as far as Texas and San Francisco, - more than a thousand miles away. Wire antenna doesn't change much, even when hanging out on the balcony.

Time and the last listened station are lost if you un-plug it or remove the batteries - it returns to the deafault loud 40 level volume and to FM band. But pre-set stations remain in memory.

Q2: I am confused about its "100-300000 khz continus coverage". Bands on pseudo-analog dispaly are not overlapping. For ex. low AM ends at 520 KHZ. If I dial 519 and go down, it apperas to tune to 519, 518 etc. But if I dial, say, 140, it displays 140, but tunes to 1040 AM (MW). Anybody noticed this?

Wind a longer wire 15 times around the whip and then up
and towards the south or west window.

Railway Depot? Waterfront or the False Creek Pacific National?
There is no depot downtown anymore. And how much RF do
frain produce? These aren't electrical trains.
And what is the RF you are talking about? Mostly damp street lights
and hundreds of cars starting up all the time.

And what were you expecting in sw reception? Do you dismiss
anything that is not in English?
Which day was that? There have been huge fadeouts because
of solar activity which preclude high-latitude sources.

See the odxa.on.ca pages and their World English Survey for
some hints.

Most stations aren't broadcasting 24 hours a day, you have to be
up, awake and at the radio at 2 or 7 in the morning for some
stations.
Try for RNZI, RNW, DW, RTI, RA,CRI, RCI, RJ, RKI, VoR, VoA backend
(i.e. the Ascension or Delano signals going the other direction)
Get an Azimuth map from the web and use that to think about
where stations might be. Eg http://rivat.chez-alice.fr/software.htm
Get the WRTH and Passport (from library, or buy) and list all
the powerful (>50 kw) and where they are.

For MW, scan the lists of
http://members.shaw.ca/nwbroadcasters/recentnews.htm
and see what you have got so far.

The world is out there if you have the time and the ears.

Google the nearby Grayland DX expeditions that pick up
MW from Asia and other places. You might be amazed.

What do you mean which one? Are there two different designs? Maybe
you are implying/suggesting that the manufacturer went through some
type of a major engineering change somewhere during the development
cycle which produced a significantly different radio.

I have heard that there was something different with the antenna
circuits when plugging in an external antenna that changed along the
way. I think my radio acted differently from the schematic that was
posted to Degen group.

It would be nice to have a list of engineering changes that took place
along the way, but not likely with a radio made in China.

When the coax (shield) is grounded near the balun which is located close
to the ground rod at the bottom of the random wire's vertical section of
wire, a common mode signal picked up on the coax shield going to the
house, can not feed back into the center conductor of the coax through

the antenna connection at the balun. When the coax ground is *only* on the other end of the coax, the shield can pick up noise and feed it into the center conductor at the antenna end where it becomes a differential mode signal that the radio can receive.

Bruce:

You are correct, no recent data and we CANNOT see or prove the ether.
But, at your disposal, you DO have logic ...

Waves require a medium, if you propose radio does not require waves, and
some other form of transfer is being had when radio energy leaves the
xmitting antenna to arrive at the receiving antenna--you may, indeed, be
correct. But, until you can prove that, the ether stays ...

Regards,
JS

Yea, Yea, we know, we know, we heard it a million times - the white guys killed all their Buffalo for sport. If that's the case then why is it I can go over there to Chilli's and get a Buffalo burger? The real problem was the NAs didn't know how to manage herds of Buffalo. And then goin and selling New York city for 24 bucks worth of beads. Whazzup wid dat????? Nowadays they got it turned around pretty good. I think all those Native Americans are doin AOK over here by me. They got the state of Connecticut to put a road into their reservations and now they got a couple casinos and they're really raking it in. Takin a lot of money off of the white guys now.

Now as far as those Mexicans go I think they should just stay home where they belong. (They'll tell ya that they own Southwestern corner of the USA, but that's just more sour grapes. They were about as dumb as those NAs when it came to sellin off their land.) That's right gosh darn it. Who the heck they think they are just waltzin in here and pickin fruit and makin hot dogs over there at the swift plant. Now I heard that them Mexicans make a really nice Burrito. I've had steak burritos and I've had chicken burritos, but I never had a mexican burrito.

The modern concept of the photon was developed gradually (1905ï¿½17) by Albert Einstein[2][3][4][5] to explain experimental observations that did not fit the classical wave model of light. In particular, the photon model accounted for the frequency dependence of light's

that is taken from here:
http://en.wikipedia.org/wiki/Photon

And, while that is indeed a neat "concept" and depends on einsteins "gravitational ether", it is not the protons which are real and NOT a concept ...

Protons are real ...

The most comprehensive description of the KA1103/DE1103 appears to be on the Russian Radioscanner forum. There is a compilation of material on modifications by someone by the name of IRIS, a crude, computer translation of which is available on the main English language forum at http://groups.yahoo.com/group/de1103/ in the Files area. It reports a difference in the antenna input and one or two internal changes that are obvious when opened up. However, this was a revision in effect after October, 2004. Whether there has been any subsequent revision has not been reported or, at least, is unknown to me.

The antenna input change may be detected by an external test. Tune to a weak VHF-FM signal. insert a bare 3.5mm plug into the antenna jack. If the signal decreases, you have a post Oct/2004 model, otherwise an original one. The newer one disconnects the telescoping antenna when an external antenna is plugged in; the older model left the telescoping antenna always connected.

This thread still going? wow Maybe we can chat about if a tree falls in the forest and no one is there....does it make a sound? I think we can line up two camps on this. John Smith will definitely be on the side there is NO sound if no one is there, only ether. Proving his 1920's theories.

It does't matter if anybody is in a forest or not if a tree falls down.Of course the tree makes a sound,if it falls down.Sound waves traveling through the ether.Tell ya what,go hide a microphone in a forest and wait long enough and you will hear a tree fall down.You just might hear Big Foot stompin around in that forest too.

Oh, you're a nasty obnoxious person. Probably a Republic party member
then.

You guys sure got your ASSES handed to you when America repudiated the
Republic party. Took Americans long enough, but they finally figured
out the truth.

You will too. CW is obsolete. Fact.

FO&A,

Sangean DRM-40 is 'it' "The DRM Radio" many Shortwave Listeners
(SWLs) have been waiting for. A Radio Receiver that tunes Longwave,
Medium Wave (AM Band) and the Shortwave Wave (SW) Band with
built-in support of DAB, RDS and DRM.

>review of it on RadioIntel.com:
>
>http://www.radiointel.com/review-sonys10mk2.htm

This review is bizarre. Even ignoring that it compares the Sony to an R75... And that it evaluates the sony for dxing... I'm still befuddled by this: It evaluates the $10 Sony portable in conjunction with a loop antenna that's gotta be 6 times as large as the radio! (And more expensive.)

Who carries a loop antenna around to use with their shirt pocket portable??? If you're willing to do that, might as well just by a larger radio.

Would have been nice to see the data for the Sony as it is actually going to be used -- by itself.

BpnJ,

You "Got-It-Right !" - It is one possible method of Rigging
{Installing} a Shortwave Antenna in smaller urban lots and
achieving both good Signal Levels and Low Noise results.

Plus it usually puts "The Lay" of the Coax Cable
under-the-ground directly below the Elevated
Wire Antenna Element. This also makes the
Outer-Shield of the Coax a Ground {Reflecting}
Radiator and helps to unify the conformity of
that area of the ground along "The Lay" of the
Coax Cable and the Wire Antenna Element.

at least that is how 'i' see it - iane ~ RHF

- By the way, my matching transformers are grounded
- at the feedpoint with about 9' of ground wire (horrors!).

DX Ace,

Nine Feet (9-Ft) compared to 100-Ft or 200-Ft long Wire Antenna
Element is not much especially when it is 75-Ft away from the
house. ~ 1-in-12 / 1-in-23

The original post suggested that one opion was to use a 40-Ft
piece of Ground Wire {Down-Lead} compared to (used with) a
150-Ft Wire Antenna Element. ~ 1-in-5
- - - IMHO - This would be a "Bent" {Off-Center-Fed} Dipole
[Type] Antenna with a longer Horizontal-Out-Arm connected
to a Matching Transformer with a shorter Vertical-Down-Leg
that is Grounded at the bottom. Plus the shorter Vertical-
Down-Leg is directly in-the-house being saturated by all the
Man-Made-Noise 'aka' Home-Made RFI and EMF.

4638. WHY - The Far-End-Fed Shortwave Listener's (SWLs) Inverted "L" Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-12-20 10:42:46 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1166611366.315006.78590@f1g2000cwa.googlegroups.com>
Source record: 100778

DX Ace,

WHY - The Far-End-Fed Shortwave Listener's (SWLs) Inverted "L" Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11698

It has been suggested by many over the years for those trying
to put-up Shortwave (HF) Antennas in small urban lots where
Man-Made-Noise RFI and EMF are very real problems.
- - - IIRC - John Doty referred to it in his many writings
-and- I have suggested it here before, as one possible method
of Laying-Out and Rigging a Shortwave Listener's (SWLs) Antenna.
- - - Maybe I Got the Idea for this Set-Up from the Wellbrook (UK)
webpage for Low Noise Antenna using the Universal Magnetic Balun
and the Antenna Feeder Isolator. Take-a-Look & Check-it-Out :
http://www.wellbrook.uk.com/longwire.html
Two Drawings : The Wrong Way and Right Way by Wellbrook.

* Getting Ready To Hook-Up A Random Wire Antenna
-and- Have A Question...
http://www.google.com/group/rec.radio.shortwave/msg/ba40a90812205bf9
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11671

* Moderate Signal & Very Low Noise Antenna Design :
A 110 Foot Coax Cable feed-in-line going out away
from the House with 100 Feet Buried that is coupled
to an a Far-End-Fed 15V/50H Foot Inverted "L" Antenna
Element and using a Matching Transformer and a
remotely located Ground Rod at the base of the Antenna.
- Why - The Entire 65 Feet of the Antenna is away
from the House by 50 Feet and is relatively Noise Free.
http://groups-
beta.google.com/group/rec.radio.shortwave/msg/d475a10814862d1d

* The Better Long Wire Antenna :
+ You may find that you would get even better Radio
Reception with a 50 Foot Coax Cable out to 50 Feet
and a 100 Foot Wire Antenna Element from 51-150 Feet.
+ Add - A MatchingTransformer between the Wire
Antenna Element and the Coax Cable.
+ Install - A remote Ground Rod at the 50 Foot point
where the MatchingTransformer, Wire Antenna
Element and the Coax Cable all come together.
+ Plus - Get the Wire Antenna Element Up-in-the-Air
about 15-25 Feet - So that it is not a Ground
Tripping Hazard or a ClothesLine type Hazard.
+ Rig - The Wire Antenna Element as a Short

Vertical-Up-Leg with a Long Horizontal-Out-Arm
+ Lets call it an Inverted "L" {Shape} Antenna :o)
http://groups-
beta.google.com/group/rec.radio.shortwave/msg/ef9be06710280fb3

* Far-End-Fed 'Low Noise' Inverted "L" Antenna
- 25 Foot Vertical-Up-Leg
- 75 Foot Horizontal-Out-Arm
Laid Out : North-to-South
Antenna Element : #14 AWG Insulated Stranded (19) Copper Wire
Matching Transformer (UnUn) : RF Junkie "SWL-1" 10:1 MLB
Remote {Primary} Ground : 8 Foot Ground Rod
Feed-in-Line : RG8 Coax Cable
Shack's Ground : 8 Foot Ground Rod
Feed-Line-Isolator : : RF Junkie 1:1 UnUn
.
Antenna-and-Ground System :
The Feed-Point of the Inverted "L" Antenna is at the Far-End
of the Antenna away from the House. At the Bottom of the
Vertical-Up-Leg of the Antenna a 'remote' earthen Ground
Rod is installed in the Ground. The Matching Transformer
(UnUn/MLB) is Mounted directly on the Top of the Ground
Rod. The Feed-in-Line Coax Cable is run directly under the
Horizontal-Out-Arm of the Wire Antenna Element; and is
Buried about 6"-8" under the surface of the ground. The
Feed-in-Line comes out of the ground near the House and is
connected to a Feed-Line-Isolator that is mounted on the Shack's
Outside Ground Rod using two Hose Clamps on the two PL-259
Plugs connected to both ends of the Isolator. The second 20 Foot
piece of Coax Cable goes up to the Shack's Antenna Switch that
is tied to the Shack's Ground. Finally a 3 Foot piece of Coax
Cable is connected to the Receiver which is also tied to the Shack's
Ground. When the Receiver is not in use the Antenna Switch is
'set' to the Center "Grounded" Position.
.
Got the Idea for this Set-up from the Wellbrook (UK) webpage for
Low Noise Antenna using the Universal Magnetic Balun and the
Antenna Feeder Isolator. Take-a-Look & Check-it-Out :
http://www.wellbrook.uk.com/longwire.html
Two Drawings : The Wrong Way and Right Way by Wellbrook.
REPEAT - CHECK-OUT THE WELLBROOK (UK) WEBPAGE
http://www.wellbrook.uk.com/longwire.html
http://groups-
beta.google.com/group/rec.radio.shortwave/msg/f0f72ca458581b9c

* A Second Look : The WellBrook lay-out for a Low Noise Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/4856
http://www.wellbrook.uk.com/longwire.html
.
This webpage by WellBrook shows what I think is the best way
of using a 9:1 Matching Transformer at the 'remote' Antenna

Feed-Point and then using a 1:1 Line Isolation (Coupler) at the
ground level (rod) entry to the House.
http://www.wellbrook.uk.com/longwire.html
.
Note - How the Feed-Point of the Antenna is moved to the
Far-End of the Antenna vice the normal way of simply using
the Nearest-End as the Feed-Point.
http://www.wellbrook.uk.com/longwire.html
.
TIP - Burying the Coax Cable under the Ground directly
under the elevated Antenna Wire can also improve the
overall properties of Antenna.
(Making the Coax Cable a Unifying Ground Radial)
.
IMHO - Even if a 1:1 Line Isolation (Coupler) is not used
with the above lay-out of a Far-End-Fed Inverted "L"
Antenna. Since the Horizontal Arm of the Antenna would
be at least 30 Feet (10 Meters) the distance would still
make the use of an Antenna Feed-Point Ground and a
Shack Ground the better Noise Reduction Set-Up.
http://www.wellbrook.uk.com/longwire.html
PLUS AGAIN - Burying the Coax Cable under the Ground
directly under the elevated Antenna Wire can also improve
the overall properties of Antenna.
(Making the Coax Cable a Unifying Ground Radial
between the Antenna Ground and the Shack Ground.)

> > the antenna connection at the balun.

I got that part and will add another 15 ft of antenna into an "inverted
L" shape to bring to the ground point. Only 15 ft, so more like a
crooked Random. Unfortunately this will bring the Balun at the far end
connection point to about 2 ft from the boathouse. There is a power
feed to the boarthouse that can be turned off easily at the house.
Also with the ground at the boat house the soil is very moist so should
be a good ground point.

When the coax ground is *only* on
> the other end of the coax, the shield can pick up noise and feed it into
> the center conductor at the antenna end where it becomes a differential
> mode signal that the radio can receive.
>
> http://www.hard-core-dx.com/nordicdx/antenna/feed/feed1.html

The part I have a problem understanding is the second ground connection
near the house having to be as short as possible. I don't see the
difference between 40 feet of ground wire to the second ground block in

say an attic if the antenna lead was coming into the attic or 40 ft of the coax outer jacket if the coax goes thru a ground block at the rod. Seems to me both could act more like an antenna for picking up common mode noise.
I have posted a sketch onto alt.binaires.pictures.radio showing the 2 setups.

Since the above is no longer part of my setup this is more of an interest sake.

Thanks to the replies I have recieved my antenna plans have changed in the past couple of weeks to the suggested far feed antenna connection, far feed ground rod, balun close to ground rod, coax buried for about 125 ft to another ground block at house which will be attached to a ground rod near the house, and then coax to the reciever.

Think I am on the right track. Warm weather is still here so grounds not frozen or snow covered so trenching will be easy.

Again Thanks

Brian

The sketch I posted should have shown a Balun in the attic. I will be
using the LMZ-50 balun which relies on the coax ground for its ground.

Again the sketch is for conversation/understanding only as I will be
running my feed differently.

Brian

I haven't heard of anyone else having the same problem, so I suspect I
just got a bad one.

I use it portable - for serious sessions I use a FT1000MP & real
antennas. But it's fun listening in on hams without having to get out
of bed<grin>...

Yeah, but you gotta admit, Brenda Ann comes across as a pretty neat person - smart, independent-minded, funny and sharp as a tack.

And I'm not just saying this to butter her up (I am married too, quite happily, to a sweet woman who shares these same qualities).

David wrote:

> So light can't get through a vacuum?

I think the idea of the ether is that it does not violate the concept of a vacuum, the latter of which is merely devoid of mass. Obviously, a vacuum can be, and usually is, full of energy in the form of radiation. The ether, to an electromagnetic "wave," is supposedly the electromagnetic equivalent of an ocean of water through which mechanical waves travel. It does not add anything that would negate the no-mass-dependent vacuum of space.

While I am not in the "ether" camp, in defense of the concept, there *is* a hypothetical construct that may be real, which I alluded to elsewhere, known to me as the "quantum background," which pervades all of the universe, quite possibly *outside* of the universe as well, which could constitute an ether-like fabric. I don't know much about it, other than that it is a constantly bubbling stew of virtual particles that appear and disappear very quickly, and that it may be responsible for the outpouring of energy at the moment of the Big Bang. It may also be the "carrier" of quantum waves - but that is getting well beyond my own knowledge base.

For what it is worth, one very important type of wave that has yet to be solidly documented is the gravity wave, the "long wave" of the cosmic spectrum. It is not exactly an EM wave, but also not exactly a mechanical wave, yet it has connections to both worlds. It is a major key to the Holy Grail of cosmology, the "Theory of Everything" that unifies all the basic forces of the universe. Its attendant quantum particle is the graviton, and a weird thing it must be if it connects us to our planet, among other things. Long story short, it is unclear what kind of medium this wave would traverse, if in fact it traverses a medium at all.

Enough about that...

exceeds the military expenditures of Britain, France, Russia and Japan

http://en.epochtimes.com/news/6-12-19/49523.html

The Information Centre for Human Rights and Democracy is a human rights organization based in Hong Kong that provides information about human rights abuses in mainland China for news outlets. It is run single-handedly by Frank Lu Siqing.

A municipal court document obtained by Lu claims his information center was "registered in Hong Kong by a foreign hostile element Frank Lu Siqing."

Lu has been imprisoned in mainland China twice, first in 1981 for calling for freedom of speech and again in 1989 for supporting the Tiananmen Square pro-democracy movement.

"If I don't speak up, then nobody will say anything. I will continue. I won't stop."--Frank Lu Siqing

Earlier this year, a Pentagon report estimated that China's military spending is actually triple its declared US$30 billion, prompting U.S. Defense Secretary Donald Rumsfeld to ask aloud, "Since no nation threatens China, one must wonder: Why this growing investment? Why these continuing large and expanding arms purchases?"

The answer to Mr. Rumsfeld's wry question can be found in China's clear language and unmistakable actions over the past number of years. China has:

Twice declared America its main enemy

Cited America's implied threat to Chinese socialism as the rationale for "intensively" reinforced armament

Stated that China should "lead the world"

Threatened nuclear war against the United States three times

Joined Russia in declaring a "New World Order"

Held its first-ever joint military exercises with Russia, and

Covertly ratcheted up its defense spending, without having a single natural enemy in the world...

The US public doesn't even have the foresight to recognize the threat of the enemy we're actually at war with, so it doesn't surprise me that people are completely unaware of the threat we face with China. It's all linked, however. If we send the message to the jihadists that we're afraid to fight, they're not the only ones who will hear us. If China knows the American

public can't stomach another war, what will keep them from invading a democratic Taiwan?

4675. Eton E10 Quick Review

Newsgroup: rec.radio.shortwave
Date: 2006-12-20 20:18:16 UTC
From: "ve3..." <ve3iut@hotmail.com>
Message-ID: <1166645896.303219.207310@f1g2000cwa.googlegroups.com>
Source record: 100663

I have had my Eton E10 for two months now and I am quite pleased with it. I bought it mainly because it was on sale and had 550 memories, but as I used it I found it to be one of my favourites. Compared to my Sony SW7600G, it was just as sensitive, sounded a bit better, and was just as easy to use. Of course, it lacked the Sony synchronous detection and ssb, but the bandwidths were ok. The rubberized finish feels good and there is a little pull-out base rest that prevents tip-over.
Things I like: It is sensitive, stable (no drift), the display is a good size except for some minor functions, the menu is easy to learn and use in the dark, the antenna trim control is useful, and it sounds good. It is easy to cart around and has enough volume.
Things I didn't like: The base rest needs to be altered so that is firmer in the out position, the pushbuttons are a little small. and the supplied rechargeable NiMh cell were of low capacity so I replaced them with 2300 Energizers that give days of playing. Actually, there isn't much to dislike about the radio.
I was surprised that I didn't find any images on the sw bands, unusual for a single superhet. I am in a low-signal area though, and the signals were weak due to the sun acting up. I may not be the best at nit-picking. I remember carting around the Zenith 3000 to listen to short wave, and these new small radios seem like marvellous engineering developments to me.

It's not a question of numbers of posts or how long one has been
hanging out in a news group. It is the duty of all decent human
being to call racism and bigotry by it's name. Wherever it is found.

<PLONK>

Charlie.

From: Guerite <aim@their.head>
Message-ID: <12ojbrk7ais5j13@corp.supernews.com>
Source record: 100672

Radio news you won't see on Neo-Kommie radio intel sites:

"Local and non-mainstream Taiwanese voices are being silenced... secret scheme to let the pro-China media monopolize the media market"

The commission has been cracking down hard on pirate stations, which are generally considered more sympathetic toward Taiwan independence.

So far this year, the commission has shut down more than 500 such outfits, according to Hsu Ming-tse, the news liaison for the protesters.

The commission itself was declared unconstitutional by the Council of Grand Justices in July because of the Communist party-based nomination method for its members.

4683. The West's rosy image of China is a deception

Newsgroup: rec.radio.shortwave
Date: 2006-12-20 21:49:27 UTC
From: Guerite <aim@their.head>
Message-ID: <12ojbvgste0hb34@corp.supernews.com>
Source record: 100673

The West's rosy image of China is a deception

The West's rosy image of China is a deception

...many Westerners fail to see the dark shadow that looms behind the bright lights of China's economic boom.

...once foreign businesspeople arrive in China, they begin to lose their sense of judgement and disregard the universal standards adopted by economies around the world.

...economic statistics are worthless in China, for they are compiled by a government that cares little about their accuracy.

Mao Yishi (T H), a Beijing-based economist, said that although China's economy is growing at a rate of 8 percent annually, it has wreaked havoc on the environment.

The resulting land exhaustion, pollution and disease have in fact caused a decline of 10 percent. Thus, China's economic development is really a disaster.

...Anyone who attempts to tell the truth in China is suppressed, either by intimidation or by force.

http://www.taipeitimes.com/News/editorials/archives/2006/12/20/2003341214

CCP Propaganda: Who has it in for China?

http://www.danwei.org/magazines/who_has_it_in_for_china.php

Defense Secretary Robert Gates said that he is concerned about Chinese computer hacking and intelligence activities. "It's been a number of years since I received any classified intelligence on what the Chinese were up to," Gates told a Senate hearing on his nomination. "But it's been my impression that they've had a very aggressive intelligence-gathering effort against the United States."

Hank,
Do you still have the Collins 32v3?

4699. DRM question

Newsgroup: rec.radio.shortwave
Date: 2006-12-21 02:19:19 UTC
From: GP <acer4101@yahoo.com>

It would appear that some stations are switching over to DRM for there shortwave service such as Radio New Zealand..I am wondering how many more stations are going to be going digital in the near future. Exactly how many people have radios capable of receiving DRM, as there does not seem to be to much to choose from at the present time..You would have to think that any station that broadcasts in DRM would have a very limited audience..I guess only time will tell..

4700. New shortwave radio, some questions

Newsgroup: rec.radio.shortwave

Source record: 100690

I bought this SW radio on sharperimage.com, and it was delivered just
now,
http://www.sharperimage.com/us/en/catalog/product/sku__CT800

and have a question about tunning. It won't go past 26.10MHz. When I
try to enter in a number bigger than that I get an error. How can I
get it to display the KHz stations. When I hold the radio a certain
way I can see it says KHz, but it won't actually display KHz, only MHz.
It also shows a decimal point, but the book says to ignore it when
entering a station. Also I can see AIR, LW and MARINE when
I hold the radio a certain way. All that I know it gets is AM/FM/SW/TV
and weather bands, the book says nothing about MARINE bands. Also it
says in the book,
A ferrite rod AM antennais located inside the unit. Position the unit
to recieve the best AM reception.
AM: 10kHz
FM: 200KhZ
SW: 5kHz
TV: CH 1
WX: 25kHz
What does this mean? Sorry for all the questions, I'm just trying to
figure all this out.

Thanks, Justin

4701. AM/FM/TV Station Lists

Besides the FCC, are there any good websites that have current listings of AM/FM/TV stations, with technical info such as freq, power, antenna pattern, etc? How about links for Canadian stations?

Energy sets up a field around an antenna. It alternates at some
rate[s] per second but there are no waves that I know of.

Dear Justin,

You have a lot of "basic" questions, all of which can be answered by a "basic" reference book. I strongly recommend that you go to your nearest large bookstore (or even a small local bookstore if they will special-order books for you) and purchase the new 2007 edition of PASSPORT TO WORLD BAND RADIO. (You can also buy it online direct from the publisher at < http://www.passband.com >. They will ship it to you - free shipping - via Priority Mail so you would have it in just a couple of days.)

This book, which is very useful not only to beginners but also to experienced shortwave listeners, is invaluable for its wealth of information regarding the basics of shortwave listening as well as advanced information. (I buy each new edition every year.)

And just to get you started with it, go here: < http://www.passband.com/pdf_files/GettingStarted.pdf >.

The questions you ask are indeed basic and if someone here were to try to answer in detail all you ask this time, it would only raise even more questions and confusion on your part.

I'm sorry to answer you in this way and please believe me when I tell you that I show you no disrespect whatsoever. I was once in your shoes myself! The hobby of shortwave listening is a fascinating one and, as any "veteran" listener will tell you, requires a considerable effort on the listener's part to learn the "ins and outs" of it. (Just like ANY worthwhile hobby!) Shortwave listening just isn't like tuning in your regular AM/FM radio and hearing your local stations. That's a "no-brainer." It takes time and experience to learn how to listen on the shortwaves properly and remember - there is no way to compress time and experience!

However, believe me, it is well-worth the effort, at least in my opinion.

Should you decide that you really do like the hobby, there are some other publications I will recommend: the annual WORLD RADIO-TV HANDBOOK, and the two hobby magazines POPULAR COMMUNICATIONS and MONITORING TIMES.

A good (free) source on the web is PrimeTimeShortwave and you will find many others sources as well, especially RadioIntel.com.

I wish you the very best of luck and many, many hours of interesting entertainment and enlightenment from your shortwave listening.

Joe

I think that what we are seeing from our experiences, is that China makes some some junk stuff and also makes some good stuff, DEPENDING on what factory produced it or assembled it, (even Sony has quite a bit of stuff assembled in China these days. Does that mean that Sony's quality is going down??). Apparently many Japanese workers are upset that a lot of their jobs are going to China.
Obviously there will be Chinese factories producing junk. Or producing good stuff, but under less then ideal conditions. Even rotten conditions that would never be acceptable in a North American or European factory. And these goods will of course leave a decidely bad impression on the buyer.
